KIRISH SO‘ZI

Ma’lumki, O‘zbekiston Respublikasi oliy ta’lim tizimini 2030 yilgacha rivojlantirish konsepsiyasi qabul qilindi, u oliy ta’lim sohasida davlat-xususiy sheriklikni rivojlantirish, respublika oliy o‘quv yurtlarini xalqaro e’tirof etilgan tashkilotlar reytinglarida (QS, THE, Academic Ranking of World Universities) ilgari surish uchun asos yaratdi. Bu hujjat universitetlar tizimini rivojlantirish bo‘yicha strategik dasturga aylanib, rivojlanishning asosiy ko‘rsatkichlarini belgiladi.

Mamlakatimizning barcha oliy o‘quv yurtlari Yevropaning oliy ta’lim tizimi asosida (European Credit Transfer and Accumulation System) kredit-modul tizimiga bosqichma-bosqich o‘tmoqda. Bu ta’lim dasturlarining moslashuvchanligini ta’minladi va talabalarga fanlarni tanlash imkoniyatini yaratdi. Shu bilan birga, kredit-modul tizimini joriy etish talabalarga O‘zbekiston universiteti va boshqa davlatlar sherik universiteti diplomlarini olish imkonini beruvchi qo‘sh diplom dasturi (Double Degree) amaliyotini faol ravishda kengaytirishga hissa qo‘shadi.

Shu bilan birga, bugungi kunda oliy ta’lim sohasini takomillashtirish bo‘yicha ishlar davom etmoqda. Amalga oshirilayotgan asosiy chora-tadbirlar orasida quyidagi yo‘nalishlarni qayd etish lozim:

Birinchi navbatda, oliy ma’lumotli mutaxassislar tayyorlash sifati oshirilmoqda. Oliy ta’lim sohasida vakolatli organ tomonidan 2024 yilning birinchi yarim yilligida bakalavriat yo‘nalishlari uchun TOP-300 ga kiruvchi universitetlar dasturlarini hisobga olgan holda 183 ta malaka talablari ishlab chiqildi va tasdiqlandi. Olti oliy o‘quv yurtining 38 ta ta’lim dasturi xalqaro akkreditatsiyadan o‘tdi.

Ikkinchidan, oliy va kasbiy ta’lim muassasalari o‘rtasidagi o‘zaro munosabatlar mustahkamlanmoqda, bu ta’limning uzluksizligini ta’minlaydi. Oliy o‘quv yurtlarining birinchi va ikkinchi kurs fanlari texnikumlar bilan integratsiyalashadi. Ta’lim sohasidagi islohotlar doirasida texnikum diplomlarini xalqaro standartlarga muvofiqlashtirish rejalashtirilgan.

Uchinchidan, yuqori malakali mutaxassislar tayyorlash jarayoniga kadrlar buyurtmachilari faol jalb etilmoqda. Bu maqsadda 5 mingdan ortiq kasb uchun malaka standartlari ishlab chiqilmoqda.

Oliy ta’limning ayrim amaliy yo‘nalishlari bo‘yicha kadrlar buyurtmachilari o‘quv jarayoniga faol qo‘shiladilar. Shuningdek, hamkor korxonalar kelajak kadrlarni o‘qitishda bevosita ishtirok etadi.

Alohida ta’kidlash joizki, oliy ta’lim sohasidagi islohotlar ta’lim xizmatlari bozorida sog‘lom raqobat muhitini yaratish, ilg‘or oliy ta’lim standartlarini joriy etish, oliy ta’lim mazmunini sifat jihatidan yangi darajaga ko‘tarish, yuqori malakali kadrlar tayyorlash tizimini yo‘lga qo‘yadi.

I. Mamatkulov,
Toshkent shahridagi Singapur menejmentni rivojlantirish instituti rektori, i.f.d.

“KELAJAK LIDERLARI” MAXSUS MALAKA OSHIRISH DASTURINING YOPILISH MAROSIMI

Joriy yilning 4-dekabr kuni Toshkentdagi Singapur menejmentni rivojlantirish institutida tashkil etilgan “Kelajak liderlari” maxsus malaka oshirish dasturining yopilish marosimi bo‘lib o‘tdi. Davlat xizmatini rivojlantirish agentligi tomonidan 2021-yilda tashkil qilingan “Kelajak liderlari” o‘quv dasturida, shu kunga qadar 200 nafar yosh davlat xizmatchilari o‘z malakasini oshirdi va mehnat faoliyatida muvaffaqiyatlarga erishib kelmoqda.

O‘quv dasturining navbatdagi mavsumi uchun Respublikaning 14 ta hududida faoliyat olib borayotgan salohiyatli davlat xizmatchilarining 50 nafari Milliy kadrlar zaxirasidan tanlab olindi. Shuningdek, maxsus kursda tinglovchilarning strategik boshqaruv, loyihalarni sifatli boshqarish va liderlik ko‘nikmalari rivojlantirildi.

Dasturning yopilish marosimida O‘zbekiston Respublikasi Prezidenti huzuridagi Davlat xizmatini rivojlantirish agentligi mas’ul xodimlari, Toshkentdagi Singapur menejmentni rivojlantirish instituti professor-o‘qituvchilari, dastur tinglovchilari hamda ommaviy axborot vositalari vakillari ishtirok etdi. Tadbir so‘ngida esa dasturni muvaffaqiyatli tamomlagan tinglovchilarga sertifikatlar taqdim qilindi.

MANAGEMENT DEVELOPMENT INSTITUTE OF SINGAPORE (MDIS) IN TASHKENT ORGANIZED A SERIES OF LECTURES FOCUSED ON GENDER-BASED VIOLENCE, AS PART OF THE GLOBAL 16 DAYS OF ACTIVISM CAMPAIGN

On December 3rd, the United Nations Office on Drugs and Crime Regional Office for Afghanistan, Central Asia, Iran, and Pakistan (UNODC ROCA) and the Management Development Institute of Singapore (MDIS) in Tashkent organized a series of lectures focused on gender-based violence, as part of the global 16 Days of Activism campaign. The event saw the participation of over 100 students who engaged in meaningful discussions surrounding this critical issue.

Ms. Salome Flores Sierra Franzoni, Head of the UNODC Information Centre for Research and Analysis of Transnational Threats Related to Drugs and Crime, delivered a compelling presentation on the key findings of the Global Femicides Report. She shared alarming facts and statistics, offering a detailed analysis of the global scale of gender-based violence and its far-reaching impacts.

Following this, Ms. Gulnar Kudaybergenova, National Project Officer at UNODC, led an interactive session focused on preventing gender-based violence and promoting gender equality. Her session encouraged student participation, fostering an engaging dialogue on how to effectively address these issues.

The event witnessed an enthusiastic response from the students, who demonstrated a high level of interest in the topic and actively contributed to the discussions. This collaborative effort highlights the importance of raising awareness and fostering dialogue on gender-based violence and equality among young people.

CONFERENCE ON "PERSPECTIVES AND OPPORTUNITIES FOR CERTIFICATION TO INTERNATIONAL STANDARDS AS A BASIS FOR GREEN ECONOMY DEVELOPMENT"

On December 11, 2024, the conference on "Perspectives and Opportunities for Certification to International Standards as a Basis for Green Economy Development" was organised by Bureau Veritas Tashkent at the "Hyatt Regency Tashkent".

This meeting aimed to share the international experiences of Bureau Veritas in the field of green economy and sustainable development. The event highlighted companies and their representatives for their contributions to certification development in Uzbekistan and Tajikistan, focusing on continuous improvement in their business activities.

Representatives from the Agency for Technical Regulation "Uzstandart," the Uzbek Center for Accreditation, Ministries and departments of the Republic of Uzbekistan, as well as representatives of some leading companies and institutions of Uzbekistan and Tadjikistan have participated in this prestigious conference. At this event, MDIST was honored with a nomination: "For many years of maintaining international standards in education". It is notable that, MDIST is the first higher education institution in the country to receive ISO certification in the 2014.

The management of MDIST thanks Bureau Veritas for high recognition and hopes for further continuation of fruitful cooperation.

TOSHKENTDAGI SINGAPUR MENEJMENTNI RIVOJLANTIRISH INSTITUTIDA TALABALAR ISHTIROKIDA YANGI YIL KONSERT DASTURI TASHKILLASHTIRILDI

Joriy yilning 18-dekabr kuni Toshkentdagi Singapur menejmentni rivojlantirish institutida talabalar ishtirokida Yangi yil konsert dasturi tashkillashtirildi. E'tiborga molik jihat, unda aksariyat jarayonlar talabalar tomonidan amalga oshirildi: sahna ko‘rinishlari, ommabop qo‘shiqlar hamda raqslar shular jumlasidandir.

Konsert dasturida Yorqinxo‘ja Umarov, Shohruh Shodmonov, hamda Shahriyor Argonov kabi estrada yulduzlari ishtirok etdi. Tadbir davomida, o‘zbek, rus, ingliz va hind tilidagi qo‘shiqlardan tashqari, turli yo‘nalishdagi raqs chiqishlari bo‘lib o‘tdi. Umuman, ushbu konsert dasturi "Cover club", "Dance club", to‘garaklari hamda mas’ul xodimlar hamkorligida jipslik bilan tayyorgarlik ko‘rilgani zalga yig‘ilgan talabalarga a’lo kayfiyat bag‘ishlab turdi.

Shuningdek, institut ijtimoiy hayoti haqidagi eng yaxshi video kontent tanlovi g‘oliblari aniqlanib, ular qimmatbaho sovg‘alar bilan taqdirlanishdi.

Ta’kidlash joizki, institutning ijtimoiy hayotini yaratishda nafaqat xodimlar, balki talabalarning ham o‘rni beqiyosdir. O‘z o‘rnida, talabalarimizdan bundan keyingi tadbirlarda ham shunday faollik va tashabbuskorlikni kutib qolamiz.

WORKSHOP ON "INTERNATIONALIZATION, RESEARCH AND QUALITY MANAGEMENT IN GLOBAL UNIVERSITIES: STRATEGIC APPROACHES TO SUSTAINABLE DEVELOPMENT GOALS"

In cooperation with the Eurasian Alliance, which includes 150 universities from 90 countries, a Workshop on "Internationalization, Research and Quality Management in Global Universities: Strategic Approaches to Sustainable Development Goals" was held at Tashkent State Transport University.

At the event, EURAS President Prof. Dr. Mustafa Aydın, consultant of EURAS strategic partner "E-Quadrat" company, Prof. Dr. Olgun Çiçek and the Ambassador of the Republic of Turkey to Uzbekistan Olgan Bekar welcomed the participants with their opening remarks and emphasized the important aspects of developing international educational relations, strengthening global cooperation in research and improving the quality of education. Also, the Head of the Innovation Agency of the Ministry of Higher Education, Science and Innovation of the Republic of Uzbekistan, Sharof Rajabbayev, and the representative of the Ministry of Transport, Shavkat Zaynutdinov, noted the need to pay great attention to the processes of internationalization in the education system.

Rectors of 12 state and 14 non-state private universities, as well as rectors and responsible representatives of more than 50 state and non-state universities located in the regions of the republic, participated in the seminar offline and shared their experiences. The event was an effective platform for strengthening international educational cooperation, implementing new initiatives and innovative approaches.

Special attention was paid to the following issues in the sessions:

1. Developing cooperation and strategies for higher education in Eurasia and the Middle East region.
2. Increasing the mobility of students and academic staff.
3. Improving accreditation processes and raising the quality of education.
4. Support of entrepreneurship and startup ecosystems.

GUEST TALK: UZSU AT MDIST

GB MDIST recently hosted a Guest Talk in partnership with the Uzbekistan Students Union (UzSU). The event focused on providing students with practical insights into studying, living, and obtaining scholarships in the UK.

🎓 Representatives from UzSU shared valuable information about navigating academic and cultural life in the UK, as well as opportunities for securing financial support through grants.

ЎЗБЕКИСТОНДА ХУФЁНА ИҚТИСОДИЁТНИ ОЛДИНИ ОЛИШ ЙЎНАЛИШЛАРИ

Маматкулов Илҳом Абдурашидович
Тошкент шаҳридаги Сингапур менежментни
ривожлантириш институти ректори, и.ф.д.
https://doi.org/10.5281/zenodo.14729252

Аннотация. *Мазкур мақолада Ўзбекистонда хуфёна иқтисодиётнинг бугунги кундаги ҳолати, унга таъсир этувчи омиллар ўрганилган. Хусусан, солиқ маъмуриятчилигида электрон хизматлар уларнинг хуфёна иқтисодиётга таъсири ва бу борада мавжуд муаммолар тадқиқ этилган. Шунингдек, мақолада солиқ маъмурчилигида электрон хизматлар кўрсатилишини такомиллаштириш орқали хуфёна иқтисодиётни қисқартириш бўйича таклиф ва тавсиялар ишлаб чиқилган.*

Калит сўзлар: *иқтисодий сиёсат, макроиқтисодий барқарорлик, хуфёна иқтисодиёт, солиқ тизими, тадбиркорлик субъектлари, рақамли хизматлар, интеграция.*

Маълумки, хуфёна иқтисодиётга қарши кураш дунёнинг кўплаб мамлакатларида долзарб муаммолардан бири сифатида эътироф этилади. Шу билан бир қаторда, Ўзбекистон Республикаси миллий иқтисодиётида ҳам хуфёна иқтисодиётнинг кўлами юқори даражада сақланиб қолмоқда.

Хуфёна иқтисодиёт нафақат иқтисодий ижтимоий тузилмалар, жамиятдаги иқтисодий муносабатларни ўз ичига олувчи мураккаб ижтимоий-иқтисодий воқелик, балки, аввало, жамият томонидан назорат қилиб бўлмайдиган, мамлакат аҳолисининг бир қисмини ташкил қилувчиларнинг шахсий ва гуруҳий манфаатларини қондириш, яъни катта миқдорда қўшимча даромад олишни кўзлаб давлат органлари бошқаруви ва назоратидан яширган ҳолда, давлат ва нодавлат мулкидан ҳамда иқтисодий бойлик, тадбиркорлик қобилиятидан жиноий йўл билан фойдаланишдир.

Мамлакатимизда бизнес учун қулай ишбилармонлик муҳитини яратиш, тадбиркорлик субъектларининг ҳуқуқлари кафолатларини мустаҳкамлаш ва уларга қўшимча қулайликлар яратиш орқали яширин иқтисодиёт улушини камайтириш чоралари кўрилмоқда. Шу жумладан, Ўзбекистон Республикаси Президентининг алоҳида Фармони билан мамлакатимизда фаровонлигини янада ошириш, иқтисодиёт тармоқларини трансформация қилиш ва тадбиркорликни жадал ривожлантириш борасида бошланган ислоҳотларни изчил давом эттириш мақсадида “2022-2026 йилларга мўлжалланган Янги Ўзбекистоннинг Тараққиёт стратегияси” тасдиқланди. Ушбу Тараққиёт стратегия билан норасмий секторда бандликни камайтириш бўйича тегишли стратегия лойиҳасини ишлаб чиқиш, бунда яширин иқтисодиётни қисқартиришда жамоатчилик ролини ошириш ва норасмий секторда банд бўлган аҳоли ўртасида ижтимоий ҳимояни таъминлаш юзасидан тарғибот ишларини олиб бориш вазифаси белгилаб берилди.

Шундан келиб чиқиб, солиқ тизимида ҳам замонавий ахборот-коммуникация технологияларини кенг жорий этган ҳолда, солиқ тўловчиларга мажбуриятларини ихтиёрий бажаришга шароит яратиш ҳисобига солиқ йиғимларини ошириш, шунингдек, инсон аралашувини чеклаш, қарор қабул қилиш жараёнини автоматлаштириш ва ягона

стандартлари жорий этиш мақсадида махсус стратегия белгиланди. Мазкур стратегияни амалга оширишнинг устувор йўналишлари этиб қуйидагилар ҳисобланади:

- Давлат солиқ хизмати органлари ва солиқ тўловчилар ўртасида ўзаро алоқани масофавий тарзга ўтказиш, барча иштирокчилар ўртасидаги муносабатларни ахборот-коммуникация технологияларини кенг қўллаш орқали тўлиқ автоматлаштириш ва интерактив давлат хизматлари сонини кенгайтириш;
- давлат органлари ва бошқа ташкилотлар ахборот тизимлари билан электрон ҳамкорлик орқали ахборот алмашинувини самарали ташкил этиш ҳамда бу борада мавжуд муаммоларни бартараф қилишдир.

Бугунги кунда интернет тармоғи орқали нафақат давлат хизматлари, балки интернетнинг ажралмас қисми ҳисобланган ижтимоий тармоқларнинг ривожланишига ҳам олиб келди, натижада фуқароларимиз ўзаро суҳбатлашиш, маълумот алмашиш, радио, телевидение, олди-сотди, электрон биржа савдолари, онлайн ўқиш, реклама ва хизматлар кўрсатиш билан шуғулланишни бошлади. Бу эса бир вақтда интернет ресурсларидан фойдаланган ҳолда солиққа тортилмаган ҳамда солиқ базасини топиш ва солиқ солиш механизми йўқлигидан фойланган фуқароларимиз интернет ресурсларни актив қўллаган ҳолда даромад олишига олиб келди.

Ушбу пул оқимларини, даромад манбаларини назорат қилиш ҳамда тегишли тартибда уларни солиққа тортиш механизмлари бугунги кунда Солиқ кодексида ўз аксини топмаган. Фақатгина интернетда ижтимоий тармоқлардан фойланган ҳолда даромад топган жисмоний шахслар тегишли тартибда жисмоний шахслардан ундириладиган даромад солиғини тўлашлари кўрсатиб ўтилган холос. Ушбу олинаётган даромадлар солиқ органларида кўринмайди, шу сабабли бу фуқароларни олаётган даромадларини солиққа тортишнинг имконияти йўқ бўлган тақдирда ҳам уни исботлаш тизими яратилмаган.

Жумладан, оддий “Telegram” ижтимоий тармоғидан фойдаланувчиларни олсак, бу ерда канал, бот ва гуруҳлар тузган ҳолда фойдаланиш ёки ишлатиш мумкин, фуқаро шундай қулай имкониятлардан фойланган ҳолда бепул реклама ишини, товарларни олди-сотди, хизмат кўрсатиш, онлайн ўқиш, маслаҳатлар, бугунги кунда эса жуда фаоллашган олди-сотди ва етказиб бериш хизмати амалга ошириб келмоқда, хизмат ҳақини эса “Click” ёки “Payme” электрон тўлов воситалари орқали жисмоний шахсларнинг шахсий банк пластик карточкаларига қабул қилмоқда.

Бугунги кунда, ижтимоий тармоқларда бунақа хизмат кўрсатувчилар жуда кўп, шу қаторда қонуний тарзда давлат рўйхатидан ўтган тадбиркорларга қарашли савдо шахобчаларидан фуқаролар маҳсулот харид қилиб, тўловни пластик картаси олқали тўламоқчи бўлса, тадбиркор тўловни терменал орқали қабул қилмасдан, ҳар-хил баҳоналар билан тўловни “Click” орқали шахсий пластик картасига ўтказиб олмоқда, сабаби товар айланма маблағларини ҳисоб рақамига кўрсатмаслиги, натижада солиқ базасини камайтиришга ва солиққа тортилмаган даромад олишга олиб келади.

Солиқ органларида солиққа тортилмаган даромадларни аниқлаш, таҳлил қилиш ва солиққа тортиш механизими етарлича эмас. Биргина “Telegram” ижтимоий тармоғи орқали реклама хизматини кўрсатувчи айрим каналларда 100 мингдан ортиқ обуначилари бор, бундай гуруҳларда бир кунда юзлаб доимий равишда рекламлар берилиб, худди шундай қонуний фаолият юритадиган тадбиркорлик субъектларига нисбатан бир неча баробар ноқонуний айланма орқали даромад кўришлари мумкин.

Мазкур ҳолатлар натижасида бугунги кунда мамлакатимиз иқтисодиётида бир қатор муаммоларни кузатиш мумкин.

Муаммо: Ўзбекистон Республикаси Президентининг 2021 йил 4 октябрдаги “Чакана савдо ва хизмат кўрсатиш соҳасида назорат-касса техникасидан фойдаланишни такомиллаштиришга доир қўшимча чора-тадбирлар тўғрисида”ги ПҚ-5252-сон қарорига мувофиқ, накд пул тушумига эга бўлган тадбиркорлик субекталари томонидан 2022 йил 1 январдан “Online” назорат касса машинасини ўрнатилиши мажбурийлиги белгиланган. “O‘rikzor savdo kompleksi”да фаолият кўрсатувчи тадбиркорлик субъектлари томонидан “Online” назорат касса машинасини харид қилиши бўйича белгиланган тўловни тўлаш ва ҳар ойлик абонент тўловини амалга ошириш юзасидан зиддиятли вазиятлар келиб чиқмоқда.

Таклиф: Солиққа оид ҳуқуқбузарликни камайтириш ва тадбиркорлик субъектларига қулай ишбилармонлик муҳитини яратиш мақсадида, белгиланган ҳар ойлик абонент тўлови миқдорини чораклик тўлаш тартибини жорий этиш ва тўлов миқдорини 50 фоизга пасайтириш лозим.

Муаммо. Савдо ва хизмат кўрсатиш шаҳобчаларида назорат-касса техникасини ва ҳисоб-китоб терминалларини қўллаш тартибини бузганлик, накд пул маблағлари ёки пластик карточкалар бўйича тўлов шаклига қараб нархларни сунъий равишда оширганлик ёки пасайтирганлик, тадбиркорлик фаолиятини давлат рўйхатидан ўтмасдан амалга оширганлик, шунингдек, идентификация қилиш воситалари билан мажбурий рақамли маркировка қилиш назарда тутилган маҳсулотларда қалбаки маркировка қўлланилганлик ёки маркировка мавжуд эмаслиги бўйича солиққа оид ҳуқуқбузарликлар содир этилганида истеъмолчилар томонидан мобил илова орқали электрон тарзда мурожаат этишлари учун етарлича шароитлар яратилмаган.

Таклиф: Солиққа оид ҳуқуқбузарликлар содир этилишини олдини олиш, истеъмолчилар ҳуқуқларини янада ҳимоя қилиш ва улар томонидан мобил илова орқали электрон тарзда мурожаат этишлари учун етарлича шароитлар яратиш мақсадида, барча савдо шахобчаларида QR-кодиёпиштирилишини тўлиқ таъминлаш. Шунингдек, бозор худудида ўрнатилган электрон маълумотлар мониторларда солиққа оид ўзгаришлар, фуқароларнинг иқтисодий саводхонлигини ошириш, мурожаат этиш тартиб-қойдалари ва Давлат солиқ қўмитаси томонидан ишлаб чиқилган видеороликларни доимий равишда намойиш этиб борилишини таъминлаш.

Хулоса қиладиган бўлсак, хуфёна иқтисодиётга сабаб бўлаётган омиллардан бири, бу тадбиркорлик субъектлари (асосан савдо ва умумий овқатланиш) билан муносабатда бўлувчи шахсларнинг харид чекини талаб қилмаслиги ҳисобланади. Бу, ўз навбатида, тадбиркорлик субъектлари орасида носоғлом рақобат муҳитининг шаклланишига олиб келади. Агар ҳар бир истеъмолчи томонидан чек талаб қилинса, хуфёна иқтисодиёт улуши қисқариши баробарида, солиқлардан бўйин товлаш ҳолатлари камайиб, бюджет тушумлари ошиб боради. Натижада мамлакат иқтисодиёти ривожланади.

Давлат бошқаруви академияси мустақил тадқиқотчиси
https://doi.org/10.5281/zenodo.14729279

Аннотация. *Мақолада муаллиф томонидан мамлакатимизда ижтимоий йўналтирилган бозор иқтисодиётига ўтишни таъминлашда ва унинг "Кадрлар тайёрлаш миллий дастури"ни амалга оширишда билимдон ва ишбилармон ходимларни шакллантиришга эришиш муҳим ижтимоий-иқтисодий аҳамиятга эгалиги таҳлил қилинган. Шунингдек, бугунги кунда олий таълим тизими ташкилотларида рўй бераётган ўзгаришлар ҳар бир шахс учун, унинг яшашининг барқарорлиги учун катта имкониятлар туғдириш билан бирга жиддий хавф-хатар ҳам туғдириши, бундай вазиятларда эса персонални бошқариш алоҳида аҳамиятга эгалиги ҳамда бу каби йўналишларни такомиллаштириш бўйича таклифлар келтирилган.*

Калит сўзлар: *бошқарув, иқтисодиёт, ижтимоий соҳа, таълим тизими, олий таълим тизими, инсон ресурслари, сифат кўрсаткичлари, таҳлил, прогнозлар.*

Ўзбекистон Республикасининг ижтимоий йўналтирилган бозор иқтисодиётига ўтишни таъминлашда ва унинг "Кадрлар тайёрлаш миллий дастури"ни амалга оширишда билимдон ва ишбилармон ходимларни шакллантиришга эришиш муҳим ижтимоий-иқтисодий аҳамиятга эга. Ҳозирги кунда мамлакатимизда кадрларни бошқариш долзарб муаммолардан бири ҳисобланади. Бу борада ҳукуматимиз томонидан бир қатор норматив қонун ҳужжатлари қабул қилинган. Шулардан Ўзбекистон Республикасининг "Таълим тўғрисида"ги, "Аҳоли бандлиги тўғрисида"ги Қонунлари, Ўзбекистон Республикаси Президентининг "Истиқболли ёш педагог ва илмий кадр малакасини ошириш ва тажриба алмашув тизимини такомиллаштириш тўғрисида"ги Фармони кабиларни мисол қилиш мумкин.

Режали бошқарув амалиётида "персонални бошқариш" тушунчаси йўқ эди. Лекин ҳар бир корхона ва ташкилотнинг бошқарув тизими кадрларни ва жамоани ижтимоий ривожлантиришни бошқаришнинг функционал кичик тизимига эга эди. Асосий таркибий бўлинма кадрлар бўлими бўлиб, унга кадрларни ишга қабул қилиш ва бўшатиш, шунингдек кадрларни ўқитиш, малакасини ошириш ва қайта тайёрлаш соҳасидаги вазифалар юкланар эди.

Бугунги кунда мамлакатимизда бозор иқтисодиёти чуқур илдиз отиб бораётган даврда "Кадрлар тайёрлаш бўйича миллий дастури"га мувофиқ бир қатор янги талаблар юзага келди. Улар ичида энг муҳимлари қуйидагилардир:

ижтимоий-психологик диагностика;

гуруҳларда ўзаро шахсий муносабатларни, раҳбарлик муносабатларини таҳлил қилиш ва тартибга солиш, ишлаб чиқариш ва ижтимоий ихтилофларни ҳамда стрессларни бошқариш;

кадрларни бошқариш тизимини ахборот билан таъминлаш;

бандликни бошқариш;

бўш (вакант) лавозимларга номзодларни баҳолаш ва ходимларга бўлган эҳтиёжларни таҳлил қилиш;

кадрлар маркетинги;

хизмат мартабасини режалаштириш ва ижтимоий психологик мослашуви (кўникиши);

меҳнат жараёнидаги мотивлар ва сабабларни бошқариш;

меҳнат-ҳуқуқий муносабатлар масалалари;

меҳнат психофизологияси, эргономикаси ва меҳнат эстетикаси.

Агар маъмурий-буйруқбозлик тизими шароитида бу вазифалар иккинчи даражали вазифалар деб қаралган бўлса, бозор муносабатларига ўтиш шароитида улар биринчи ўринга чиқарилди ва уларни ҳал қилишдан ҳар бир корхона манфаатдордир.

Маълимки, барча ташкилотлар учун инсонларни бошқариш муҳим аҳамиятга эга. Инсонларсиз ташкилот мавжуд эмас. Ҳеч бир ташкилот керакли инсонларсиз ўз мақсадларига эриша олмайдилар. Меҳнат ресурсларини бошқариш бошқарув назарияси ва амалиётининг муҳим қисмидир.

Йирик ташкилотларда меҳнат ресурсларга умумий раҳбарлик масъулияти кадрлар бўлимининг малакали ходимларига юклатилган бўлиб, у одатда штаб хизматлари таркибига киради. Бу мутахассислар ташкилот мақсадларини амалга оширишга ёрдам бериши учун, улар фақат ўз соҳаларини эмас, балки қуйи бўғин раҳбарларининг эҳтиёжларини ҳам билишлари зарур.

Шу билан бирга, бу раҳбарлар меҳнат ресурсларини бошқариш хусусиятларини, унинг механизми, имкониятлари ва камчиликларини тушунмаса, кадрлар мутахассислари хизматларидан умумли фойдалана олмайдилар. Шунинг учун барча раҳбарлар инсонларни бошқариш усуллари ва методларини билиши ва тушуниши муҳим.

Инсон ресурсларини бошқариш тизими қуйидаги босқичларни ўз ичига олади:

1. Ресурсларни режалаштириш: инсон ресурсларига келгуси эҳтиёжларни қондириш режасини ишлаб чиқиш.

2. Персонални тўплаш: барча лавозимлар бўйича потенциал номзодлар резервини ташкил этиш.

3. Танлаш: иш жойларига номзодларни баҳолаш ва резервдан энг яхшиларини танлаш.

4. Иш ҳақи ва имтиёзларни аниқлаш: хизматчиларни жалб қилиш, ёллаш ва сақлаб қолиш мақсадида иш ҳақи ва имтиёзлар структурасини ишлаб чиқиш.

5. Касбга йўналтириш ва мослашув: ёлланган ишчиларни ташкилот ва унинг бўлинмалари билан таништириш, ишчида ундан нима кутилаётганлиги ҳақида тушунча ҳосил қилиш ва қандай меҳнат яхши баҳоланишини тушунтириш.

6. Ўқитиш: ишни самарали бажариш учун керакли меҳнат кўникмаларини ўргатиш учун дастурлар ишлаб чиқиш.

7. Меҳнат фаолиятини баҳолаш: меҳнат фаолиятини баҳолаш методикасини ишлаб чиқиш ва уни ходимга етказиш.

8. Ўстириш, пасайтириш, ўтказиш, бўшатиш: ходимларни лавозимларга ёки бошқа иш участкаларига ўтказиш методларини ишлаб чиқиш.

9. Раҳбар кадрларни тайёрлаш, хизмат кўрсатишларини бошқариш: раҳбар ходимларни меҳнат самарадорлигини кўтаришга ва қобилиятларини ривожлантиришга қаратилган дастурларни ишлаб чиқиш.

Бошқарув назарияларида персонални таснифлашда хизматчининг касби ва мансаби, бошқарув даражаси, хизматчи категорияларидан келиб чиққан ҳолда турли ёндашувлар мавжуд. Ишлаб чиқариш жараёнида иштирокига қараб персонал икки асосий қисмга ажратилади: ишчилар ва хизматчилар.

Персоналга ишлаб чиқариш ёки бошқарув операцияларни бажарувчи ва меҳнат предметлари, меҳнат воситаларидан фойдаланган ҳолда қайта ишлаш билан банд бўлган барча хизматчилар киритилади. Бунда “кадрлар”, “хизматчилар”, “персонал” тушунчалари бир хил маънони англатади.

Чет эл тажрибасида персонал муаммоларини ҳал қилишга доир иккита асосий ёндашув мавжуд. Биринчи ёндашув диққат эътиборни шунга қаратадики, “Инсон ресурсларини бошқариш” мазкур муаммони ҳал қилишнинг стратегик жиҳатларини, шу жумладан, ижтимоий ривожлантириш масалаларини қамраб олади, “персонални бошқариш” эса кўпроқ кадрлар билан оператив иш олиб боришга тааллуқлидир. Иккинчи ёндашув “Инсон ресурсларини бошқариш” меҳнат ва бандлик соҳасидаги муносабатларни давлат йўли билан тартибга солиш масалаларига, “персонални бошқариш” эса корхона даражасидаги меҳнат муносабатларига қаратилган.

Инсонлар корхонанинг рақобат бойлиги ҳисобланади, уларни жойлаштиришдан мақсад корхонанинг стратегик мақсадларига эришишдур. Персонални бошқаришдан инсон ресурсларини бошқариш сари рўй берадиган силжиш келгусидаги таркибий қайта қуришлар асосида ётган сабаблар, бошқарувнинг барча босқичларида инсон ролининг ортиши ўз таъсирини ўтказади, деб тасаввур қилиш мумкин. Инсон ресурсларини бошқариш эволюцияси ва уни ривожлантиришдаги келгуси йўналишларга баҳо бериш учун йирик корпорацияларни бошқарадиган япон ва америка мутахассисларининг фикрлари билан танишиб чиқиш фойдалидир.

Япон менежерлари бошқариш соҳасидаги бўлажак сиёсатни қуйидаги йўналишларнинг ривожланишида деб биладилар:

Инсон ресурслари потенциалининг ривожланиши – 86,6%;

Инсон ресурслари потенциалидан пухта фойдаланиш – 78,9%;

Гуруҳ тарзидаги фаолиятнинг ривожланиши – 47,1%;

Катта ёшдаги бандларнинг ривожланишига эътибор бериш – 42,4%;

Малака даражасидаги хилма-хилликни кенгайтириш – 38,3%;

Меҳнат муносабатларининг барқарорлашуви – 35,3%;

Меҳнатнинг бойитилиши ва ротация – 33,9%;

Мотивация фондларининг тўлдирилиши – 29,6%;

Меҳнат шароитларининг яхшиланиши – 9,4%.

АҚШ компанияларининг 1500 та менежерлари XXI асрдаги инсон ресурсларини бошқариш (ИРБ) нинг роли ҳақида қуйидагиларни айтадилар:

- эртанги эҳтиёж учун инсон ресурсларини режалаштириш корпорация стратегиясини шакллантиришнинг бир қисми ҳисобланади;

- инсон ресурсларини бошқаришнинг раҳбари ҳамма жойда бошқарувининг юқори аъзоси бўлади ва бизнес стратегияси режалари, технологияси, бозор маҳсулотлари ва воситалари ҳақида тўлиқ хабардор бўлади;

- ИРБ нинг вазифалари роли процессуал активатордан (маълумотлар тўплаш ва ишлов бериш) инсон ресурсларини танлаш ва фойдаланишдаги муҳим активаторга айланади;

- малака оширишдаги асосий мезонлар унинг хилма-хиллиги ва кенглиги, аниқ натижаларга эриша олиши, динамизм, командада ишлай билиши, мўлжал олиши ва ишчанлик аҳлоқидир;

- ИРБ нинг энг муҳим вазифаларидан бири корпорация маданияти, қадриятлари ва мақсадлари бирикмасидан иборат бўлиб қолади.

Хулоса қилиб айтганда, ҳозирги вақтда корхона ва ташкилот персоналини бошқариш концепцияси асосини ходим шахсий ролининг ортиб бораётганлиги, унинг асосий йўл-йўриқларни билиши, уларни шакллантира олиши, корхона ва ташкилотлар олдида турган вазифаларга мувофиқ равишда йўналтира билиши ташкил этади. Жумладан, Республикамиздаги олий таълим тизими ташкилотларида рўй бераётган ўзгаришлар ҳар бир шахс учун, унинг яшашининг барқарорлиги учун катта имкониятлар туғдириш билан бир қаторда жиддий хавф-хатар ҳам туғдиради, амалда ҳар бир кишининг ҳаётига маълум даражада ноаниқлик киритади. Бундай вазиятда персонални бошқариш алоҳида аҳамиятга эгадир, чунки у шахснинг ташқи шароитга мослашиш, ташкилотдаги персонални бошқариш тизимининг тузилишида шахсий омилни ҳисобга олиш масалаларининг бутун бир мажмуини амалга ошириш имконини беради.

IMPROVING THE MANAGEMENT MECHANISMS OF METHODS OF CONDUCTING MARKETING RESEARCH IN MANUFACTURING ENTERPRISES

Musayeva Shoira Azimovna
Professor of Samarkand Institute of Economic and Service, Samarkand, Uzbekistan
https://doi.org/10.5281/zenodo.14754281

Abstract. *This article discusses the collection, analysis and interpretation of data by observing what people do and say, observations and inferences, qualitative nature, conducting various surveys based on the use of structured closed-type questions, which are answered by a large number of respondents.*

Keywords: *research, market, analysis, survey, structure, need, situation, product, competition.*

Introduction. OnSaturation of the consumer market with goods and services is one of the most important areas of improving the well-being of the population. It not only contributes to a more complete satisfaction of needs, but also helps to improve the culture of consumption, develop competition and, on this basis, increase the rate of socio-economic development of society. In this regard, the Government of the Republic of Uzbekistan pays great attention to the state of the consumer market and the increase in the production of goods and services.

The most important direction of solving the problem of sustainable and rational saturation of the market with goods and services is to ensure the release of domestic goods in a volume and assortment that fully covers the solvent demand of the population of the Republic of Uzbekistan. To do this, domestic enterprises must be focused on the production of final products that are truly in demand on the consumer market. To achieve this, in our opinion, it is necessary to fulfill the following conditions:

Firstly: have complete information about the structure of demand for a given product and the dynamics of its change;

Secondly: to form a system for the effective use of this information in the activities of manufacturing enterprises.

In turn, this direction requires the development of methods for research and forecasting demand and the development of new organizational principles for the production of consumer goods. It should be noted that in recent years, many studies have been conducted devoted to solving the above-mentioned problems of improving market relations. At the same time, the current difficulties in satisfying consumer demand show the insufficient development of existing marketing research methods.

Analysis of literature on the topic. In the economic literature, there are many different views on the essence and concept of efficiency, as well as its various criteria and indicators are classified. Many authors emphasize that efficiency is a relative indicator and recommend that it be determined by the ratio of costs to the obtained (achieved) result.

It is necessary to acknowledge the scientists who made a great contribution to the development of the theory of marketing in the economy, while the researches conducted in the field of marketing in our country for many years stemmed from national characteristics. These

include M. Mukhammedov, M. Pardaev, R. Ibragimov. Y. Abdullaev, A. Saliev, M. Sharifkho'jaev, B. Khodiev, K.Mirzayev, SH. Ergashkhodjaeva, SH. Musaeva and others can be included.

Research methodology. Systematic approach, abstract-logical thinking, grouping, comparison, factor analysis, selective observation methods were used in the research process.

Analysis and results. As noted above, the decision on the need to conduct marketing research depends on the existing marketing information system. It is the lack of information that pushes firms to organize independent research. Conducting independent marketing research requires studying the features and limits of the application of various methods of market research and the collection of unsystematic information. Marketing research uses a variety of different research methods, which can be combined into the following groups: a) document analysis methods; b) qualitative research methods; c) quantitative research methods.

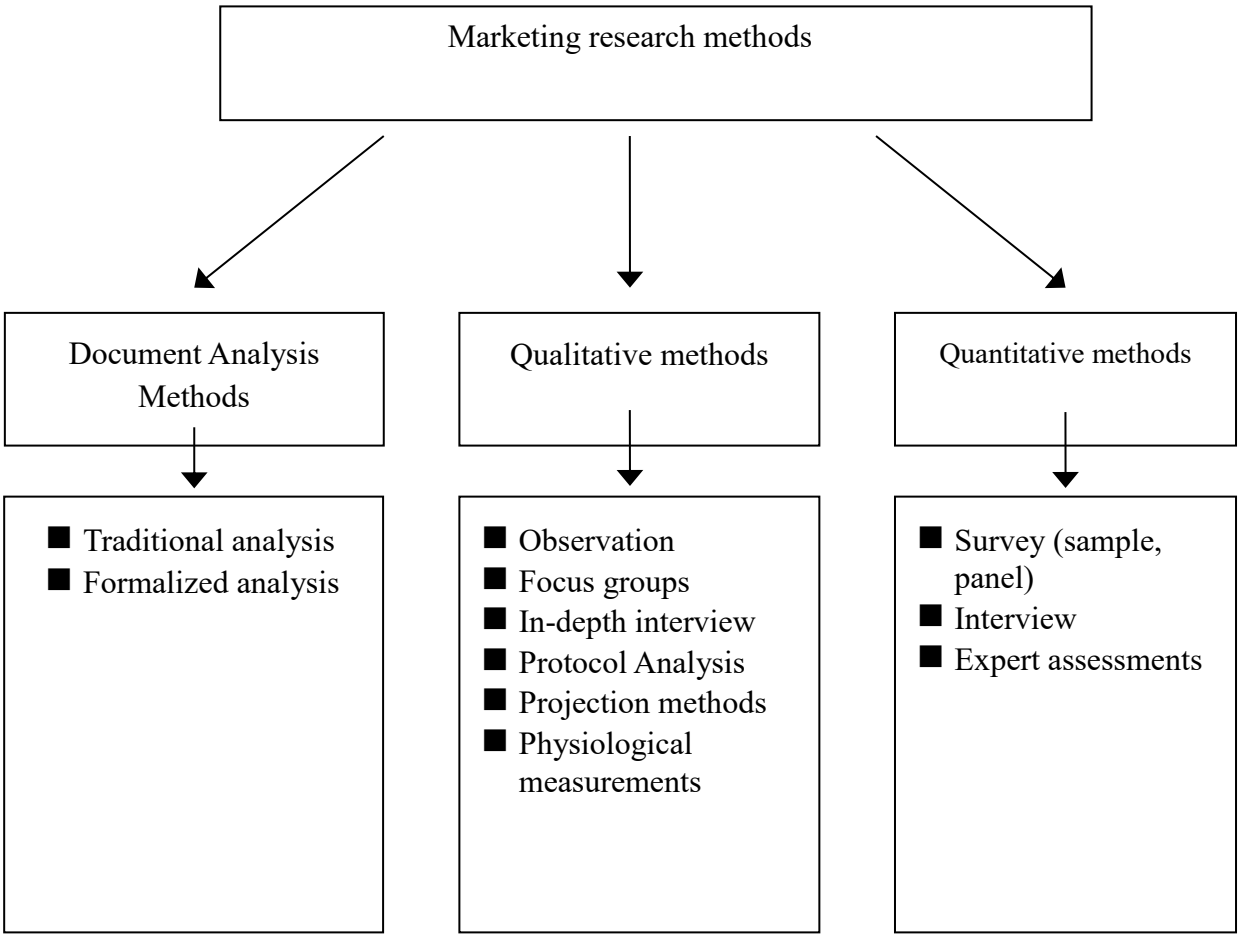

Fig. 3. Classification features of marketing research methods

Since the objectives of the study include conducting independent marketing research, we decided to dwell in more detail on the nature and limits of using the most common research methods. Document analysis methods are used mainly when there is a sufficient amount of secondary and primary data, the collection of which is carried out in the course of other types of activities.

Qualitative research involves collecting, analyzing, and interpreting data by observing what people do and say. The observations and conclusions are qualitative and non-standardized. Qualitative data can be converted into quantitative form, but this is preceded by special procedures.

Quantitative research is usually identified with conducting various surveys based on the use of structured closed-type questions answered by a large number of respondents. The characteristic features of such research are: a clearly defined format of the data collected and the sources of its receipt. The processing of the collected data is carried out using ordered procedures, mainly quantitative in nature.

Competent translation of primary and especially secondary data into target information requires knowledge of methods of analyzing the data being studied. The entire set of carriers of such data, primarily printed ones, are usually called documents, although the interpretation of information carriers varies in different literature. We also join the opinion of most authors and will call these data documents. Document analysis can be traditional and formalized.

Traditional analysis is a chain of mental, logical constructions aimed at identifying the essence of the analyzed material from a certain point of view that interests the researcher in each specific case. In traditional analysis, external and internal analysis are distinguished.

External analysis is an analysis of the document context in the true sense of the word and all the circumstances that accompanied its appearance. The purpose of external analysis is to establish the type of document, its form, time and place of appearance, who was its author and initiator, what goals were pursued when creating it, how reliable and trustworthy it is, etc. Internal analysis is a study of the essence of the document. All the work of the marketer is aimed at, in this case, conducting an internal analysis of the document, including identifying the level of reliability of the facts and figures provided, establishing the level of competence of the author of the document, clarifying his personal attitude to the facts described in the document. The variety of document types, purposes of their compilation, styles and formats leads to the fact that each researcher tries to see confirmation of his own hypothesis in the document.

The desire to get rid of the subjectivity of traditional analysis gave rise to the development of fundamentally different, formalized (quantitative) methods of analysis or content analysis.

Content analysis is a technique for drawing conclusions based on the objective and systematic identification of text characteristics that are relevant to the research objectives. It is assumed that the application of such a technique includes certain standardized procedures, often involving measurement, so that the data obtained must have the level of generalization specified in the study.

The main areas of use of content analysis are:

a) identification and assessment of text characteristics as indicators of certain aspects of the object being studied;

b) clarification of the reasons that generated the messages;

c) assessment of the impact of the message;

The uniqueness of qualitative methods of marketing research has led to the emergence of several directions of their development, for example,observation, focus groups, in-depth interviews, protocol analysis, projection, physiological measurements.

Qualitative research is based on observational methods that involve passively monitoring the respondent's behavior, usually without explaining the reasons for such behavior.

Observation in marketing research is a method of collecting primary marketing information about the object being studied by observing selected groups of people, actions and situations. In this case, the researcher directly perceives and records all factors related to the object being studied and significant from the point of view of the objectives of the study.

The variety of observation methods is determined by four approaches to their implementation: direct or indirect observation, open or hidden, structured or unstructured, carried out with the help of humans or mechanical means.

Direct observation involves directly observing the behavior of, say, shoppers in a store. Indirect observation involves studying the results of a particular behavior rather than the behavior itself. Archival data are often used here. Physical evidence of certain events may also be studied.

Overt observation assumes that people know that they are being observed, for example, when conducting special experiments. However, the presence of observers influences the behavior of those being observed, so it is necessary to strive to reduce it to a minimum. Covert observation satisfies these requirements, when the subject does not assume that he is being observed.

When conducting structured observation, the observer determines in advance what he will observe and record. All other types of conduct are ignored. A standard observation sheet is often used, which reduces the observer's time expenditure to a minimum. An example of this is the action of tax authorities at the operation of cash registers, when students observed the procedure for registering transactions in trade.

Structured observation is used to verify the results obtained by other methods, to clarify them. It can also be used as the main method of collecting information to accurately describe the object of the study and to test certain hypotheses.

When unstructured observation is conducted, the observer records all types of behavior in the episode being studied. This type of behavior is often used in exploratory research. For example, a company that produces construction tools might send its employees to study the directions and frequency of use of the tool in building houses. The results of the observations are used to improve the tool.

The focus group method is a study of behavior, way of thinking and the nature of the factors in action on a small group of people, whose activities are directed by an instructor-luderator. The group focuses on discussing individual problems and finding new ways to solve them. The main thing in this method is to identify the features of the formation of needs in different categories of consumers.

There are five main purposes for using the focus group method:

1. Generating ideas, such as relative directions for improving existing products, their design, packaging, or developing new products.
2. Studying the colloquial vocabulary of consumers, which can be useful, say, when running an advertising campaign, compiling questionnaires, etc.
3. Familiarization with consumer demands, their perceptions, motives and their attitudes towards the product being studied, its brand, and its promotion methods, which is very important when determining the goals of marketing research.
4. Better understanding of data collected through quantitative research.
5. Study of emotional and behavioral reactions to certain types of advertising.

Directed qualitative methods include in-depth interviews.

A depth interview is a series of probing questions asked by a trained interviewer to a respondent in order to understand why group members behave in a certain way or what they think about a certain issue. The respondent is asked questions on the topic under study, to which he answers in a free form. This method is used to collect information on new concepts, design, advertising and other methods of product promotion; it helps to better understand consumer

behavior, the emotional and personal aspects of consumers' lives, decision-making at an individual level, and to obtain data on the use of certain products.

Protocol analysis involves placing the respondent in a specific decision-making situation, where he or she must verbally describe all the factors and arguments that guided the decision-making process. Sometimes a tape recorder is used when using this method. The protocol analysis method is used when analyzing decisions that are distributed over time. In addition, this method is used when analyzing decisions that are very short in their adoption process.

Projection methods place respondents in certain simulated situations in the hope that respondents will reveal information about themselves that cannot be obtained through direct questioning. The following specific methods can be identified as part of projection methods: associative methods, sentence completion tests, picture testing, role playing, and retrospective interviews.

Associative methods include associative conversations and associative word testing or word associations.

Qualitative methods also include physiological measurements based on the study of involuntary reactions of respondents to marketing stimuli using special equipment. For example, the dilation and movement of pupils is studied when examining certain products, etc. Further, the study of eclectic activity and sweating of the skin of respondents is conducted, however, this technique is unusual in nature, so it can cause nervousness in respondents. In addition, its use does not allow separating positive reactions from negative ones.

Finally, the third group of marketing research methods, or quantitative methods, is a tool for obtaining data from statistical or mathematical procedures. First of all, these include survey methods.

A survey involves collecting primary information by directly asking people questions about their level of knowledge, attitudes towards the product, preferences and purchasing behavior; the survey can be structured or unstructured.

The survey methods have the following advantages:

1. A high level of standardization, due to the fact that all respondents are asked the same questions with the same answer options.
2. The ease of implementation lies in the fact that it is not necessary to visit respondents by sending them questionnaires by mail or telephone; there is no need to use technical means and involve highly qualified professionals.
3. The ability to conduct a deep analysis lies in asking successive clarifying questions.
4. The possibility of tabulation and statistical analysis lies in the use of methods of mathematical statistics and corresponding application software packages for personal computers.
5. The ability to analyze the results obtained in relation to specific market segments is due to the ability to subdivide the overall sample into separate half-samples in accordance with demographic and other criteria.

A type of survey method is a panel survey.The basic concept of the panel survey method is the concept of a panel.

A panel is a sample of surveyed units that are subject to repeated research, with the subject of the research remaining constant. Panel members may be individual consumers, families, trade organizations, experts, who, with certain reservations, remain constant. The panel survey method has advantages over conventional one-time surveys: it makes it possible to compare the results of

subsequent surveys with the results of previous ones and to establish trends and patterns in the development of the phenomena being studied; it ensures a higher representativeness of the sample in relation to the general population.

The following results can be obtained during panel surveys:

- factors influencing the object of study and their dynamics, opinions and assessments of respondents regarding goods and trade organizations, their change over time,

- reasonsdecisions and intentions of respondents and their implementation, differences in the behavior of consumers belonging to different social classes, living in different regions, cities and settlements of different types, motives for purchase and predict their development.

While a survey requires a narrow range of responses to a question, quantitative methods such as interviews provide more detailed information about consumers.

The following methods of data collection can be distinguished when conducting surveys with the participation of interviewers or when respondents fill out questionnaires themselves:

1. Interview conducted at the respondent's home. It is possible to agree on the time of the telephone interview in advance. This method usually makes it easier to establish trusting relationships, and it is possible to show samples of the product, advertising materials, etc. However, this is an expensive method of data collection.
2. Interviewingvisitors to large stores. Companies conducting such surveys may have offices in large stores. Store visitors are interviewed by an interviewer in the store or are invited to give an interview in the office.
3. Interviews in offices. Usually used to collect information about industrial, technical and office products.
4. Traditional telephone interview. The advantages of this method include:The advantages of data collection include the following: relatively low cost, the ability to cover a large number of respondents and ensure a high level of representativeness, and the ability to be carried out in a relatively short period of time.
5. A telephone interview from a specially equipped room, in which several interviewers work in parallel, and controllers can connect to their telephones.
6. Group independent completion of questionnaires. This approach is used for convenience and to reduce the cost of interviewing.
7. Self-completion of questionnaires left behind. This is a survey option based on self-completion of questionnaires. After a preliminary oral explanation of the goals and objectives of the survey, the questionnaire is left with the respondent. The completed questionnaire is taken from the respondent or he sends it by mail in an envelope with a paid response.

All of the above groups of methods have their own advantages and disadvantages, which is why it is necessary to take an individual approach to choosing a marketing research method in each specific case.

When conducting my own research in the process of writing my master's thesis, I used most of the above methods of marketing research. At the same time, to develop and conduct further marketing research at Samarkand-Apparel LLC, we compared the above groups of marketing research methods by several features. As the data in the table show, each group of methods has advantages and disadvantages that should be taken into account when defining the problem and developing a research plan.

Table 1

Brief description of marketing research methods

Sign	Document Analysis Methods	Qualitative methods	Quantitative methods
Type of information received	Secondary	Primary	Primary
Specific costs	Low	Tall	Moderate
Reliability of information	Tall	Average	Tall
Form of information received	Standard	Arbitrary	Statistical
The main advantage of the methods	Accessibility and simplicity	Variety and high precision	Breadth of coverage and generalizability
The main disadvantage	Insufficient precision	High cost	Multi-stage

In conclusion, thus, theoretical studies of the marketing management process allow us to conclude that all decisions are based on information about market factors, the main source of which is marketing research. In addition, marketing research is the bearer of the philosophy of the marketing approach to the organization of the production activities of the enterprise, which determines their role in marketing activities.

THE IMPACT OF BRANDING AND COU TRY OF ORIGIN EFFECT ON CONSUMER BUYING BEHAVIOUR

Ismoilov A.N.
University of Digital Economics and Agrotechnologies, Head Teacher
https://doi.org/10.5281/zenodo.14777136

Abstract. *The impact that globalization has had on the world and business environment has been huge in the sense that it totally changed the way consumer purchasing habits worked. Despite the fact that some global brands have emerged, such as Coca-Cola, BMW, Apple, and others that are common to see in numerous markets all around the world, some brands still appeal to customers not because of their global fame but due to their patriotic appeal. In an era when markets are full of international brands and products, local products that possess certain domestic characteristics and patriotism feelings can have a slight competitive advantage over global brands due to their place of production or brand name that has patriotic messages. Some brands have very high awareness, affordable prices, and high quality, but it is no secret that some products sell well due to their patriotic appeal. In this regard, the impact of patriotism, the country of origin effect, and patriotic branding have been thoroughly studied by many researchers, but the debate still remains as to whether country of origin and patriotic marketing influence customer purchasing decisions positively. Considering this and other developments in the Uzbek home appliances market, where instead of traditionally dominant foreign brands, local brands such as Artel have emerged, it is interesting to see how patriotic marketing and the country of origin effect influence customer buying behavior in Uzbekistan. Artel, one of the dominant companies in Uzbekistan in the home appliances and electronics industry, has used patriotic marketing as a way to compete with internationally popular brands. For this particular reason, the research evaluates the role of patriotic marketing, the country of origin effect, and branding on local companies and how they use the aforementioned factors as a way to influence customer buying behavior to their advantage. To be more precise, the research has been conducted in order to analyze the impact of patriotic marketing and the country of origin effect on consumer purchasing decisions while purchasing Artel products.*

Keywords: *marketing, industry, Uzbekistan, advertisement, consumer buying behavior.*

Introduction

The impact of globalization on consumer purchasing habits was huge in the sense that it brought new products to consumers from all over the world, widening their scope of choice and thus encouraging them to make better purchasing decisions. However, despite the fact that there are some international brands that everybody knows and loves, such as Coca-Cola, Mercedes, or others, some small and unknown brands still sell themselves well due to their patriotic appeal to customers. In fact, over time, while international companies were flooding the market with their popular products, certain domestic companies all around the world were able to earn a slight competitive advantage over them due to their place of production or labels that stated that those products were made in their motherland. In several countries, products that contained patriotic appeals were known to have a good sales record, despite the existence of better-known and higher-quality products that had higher brand awareness. Such trends prompted smaller companies to rely

on the impact of patriotism while selling their products. According to Vesel and Zich (2015), there are criteria on the basis of which customers usually make their purchasing decisions. They are: brand, price (in relation to quality), usefulness, need for that product, and country of origin. Some firms started using patriotic marketing and the country of origin effect to their advantage, especially encouraging local customers to purchase locally made products and thus gain a competitive advantage over competitors. Those firms started emphasizing that locally made brands are of the same quality as imported brands and are cheaper, but buying locally made products benefits the nation`s economy. According to Renko et al. (2012), conceptual frameworks and theories of the country of origin effect and patriotic marketing evolved from "consumer ethnocentrism" theory. In consumer ethnocentrism, customers may show preference for locally made products and underestimate or ignore foreign products. In some cases, where extensive consumer ethnocentrism exists, consumers believe that buying foreign products will cause unemployment and harm the national economy (Renko et al., 2012). Consumer ethnocentrism and consumer patriotism are therefore exploited by companies producing local products in order to gain a competitive advantage and promote their brand as "Made in Motherland," thus positively influencing consumer buying behavior to their advantage (Vesela and Zich, 2015).

As the manufacturing sector in Uzbekistan started growing, local brands such as Artel and others started relying on patriotic marketing by means of competing with popular international brands and positioning themselves as local brands with high-quality products (Uzbekistan Today, 2015).

In this regard, it is essential to conduct analysis about the role of patriotic marketing, branding, and the country of origin effect and how these factors influence the marketing strategies of local companies in Uzbekistan. The company started massive marketing campaigns under the slogans "Made in Motherland," "The Choice of the Nation," and others in order to construct an image as a "local brand" and use patriotism and the country of origin effect to its advantage. The research analyzes the reasons behind the purchasing decisions of local consumers while buying home appliances and identifies whether patriotic marketing strategies implemented by Artel are changing their purchasing behavior and encouraging them to purchase Artel home appliances.

Research Methodology

The research process is designed on the basis of the research framework proposed by Sekaran and Bougie (2010). The purpose of the study was selected as descriptive and hypothesis testing, while the type of investigation is correlational as the research is focused on finding the correlation between country of origin, branding, and patriotic marketing strategies used by Artel and consumer buying behavior in the local home appliances market. The purpose of the study is description and hypothesis testing, while the type of investigation can be concluded through correlations. The extent of research interference was minimal, while the sampling design is non-probability sampling, where certain groups or individuals within society have a higher chance of being selected for the questionnaire. All other relevant steps of the proper research methodology were observed throughout in order to conduct reliable, accurate, and ethical research.

Research Hypotheses

The following **Hypotheses** were developed from the research questions.

Hypothesis 1: Brand perception has great influence on consumer buying behavior in Uzbek home appliances market

Hypothesis 2: Country of origin is not the most important factor for Uzbek customers while purchasing home appliances

Hypothesis 3: Uzbek customers prefer imported brands while purchasing home appliances

Hypothesis 4: Uzbek customers consider price to be more important than branding and country of origin factors

Conclusion

Below, the research explains how the aforementioned research questions were answered. It should be noted that the literature review part of this research focused on analyzing and discussing theoretical background on subjects such as consumer buying behavior, brand and branding, the country of origin effect, patriotic marketing, and how these factors affect the intention of customers to purchase locally produced and imported home appliance brands. Research questions were responded to accordingly on the basis of collected data and a literature review.

The first research question stated, "To what extent does "brand perception" influence consumer buying behavior for home appliances?" On the basis of a literature review and collected data, it became evident that branding and brand perception have a great impact on consumer buying behavior. Brands play a key role in developing emotional attachments between consumers and companies, and once this emotional attachment is developed, consumers, without hesitation, want to buy products from the brand with which they have developed a special bond. For instance, authors such as Smith (2015) and Adedapo (2013) claimed that brand perception is a mental process, and companies should try to leave a great first impression on their customers if they want them to become loyal and purchase their products and services again and again. A survey has also revealed that many local consumers have a positive brand perception of imported home appliance brands, which influences their positive purchasing decisions towards imported home appliance brands. For this particular reason, the researcher can confidently state that brand perception has a great impact on consumer buying behavior in the local home appliance market.

The second research question was as follows: How important is the "country of origin" effect in influencing customer buying decisions for home appliances? Similarly, to research question No. 1, the second research question was also answered by findings of a literature review, a survey, and data analysis such as Pearson's correlation coefficient and multiple regression analysis, which revealed that local consumers place great emphasis on country of origin. Many consumers have purchased imported home appliance brands coming from Germany, Korea, Japan, and others, and they have had positive purchasing experiences and loyalty towards the products of certain countries. On the other hand, the negative experiences that they have had with products produced in China and Uzbekistan discourage them from purchasing products produced in these countries. This phenomenon was reflected in the results obtained in the survey, as many consumers claimed that they view country of origin as an important factor for them. For this particular reason, the researcher can confidently state that the country of origin effect is very important to local consumers in the local home appliance market.

The third research question was as follows: Do Uzbek customers prefer local brands over foreign brands when purchasing home appliances? Survey results, correlation coefficients, and multiple regression analysis have revealed that Uzbek consumers prefer imported brands over locally produced home appliance brands due to their positive brand image, positive product experience, and other reasons such as better quality, durability, range of choice, and other similar

factors. For this particular reason, it can be stated that Uzbek customers do not prefer local brands over foreign brands when purchasing home appliances.

The final research question was: What are the other factors (other than branding and the country of origin effect) that influence customer buying decisions in the home appliances market?. Price was one of the main factors affecting the purchasing decisions and buying behavior of local consumers in the local home appliances market. In addition, many people cited quality as a very important factor while also indicating that their previous purchasing experience also counts and affects their future consumer buying behavior.

Ethical Considerations

The researcher is fully aware of ethical issues that may arise during the primary data collection process. In order to ensure that the research complies with all research ethics requirements, an appropriate research ethics framework will be followed throughout the research process, such as the data analysis and data collection stages. No personal information will be asked from respondents, and the collected data will be treated in a respective and confidential manner to avoid offending respondents, Artel, or other involved parties. The collected data will be used for academic purposes only. And permission was obtained from respondents before collecting data from them.

SANOAT TARMOG‘INI RIVOJLANTIRISHDA KLASTER TIZIMINI JORIY QILISHNI INSTITUTSIONAL ASOSLARI

Qalmuratov Baxtiyar Seytmuratovich
Qoraqalpoq davlat universiteti, iqtisodiyot fanlari doktori, Iqtisodiyot kafedrasi mudiri
https://doi.org/10.5281/zenodo.14833264

Annotatsiya. *Maqolada mamlakatimizda sanoat tarmog‘ini rivojlantirishda klaster tizimini joriy qilishni institutsional huquqiy va nazariy asoslari o‘rganilgan. Mintaqaviy sanaot majmuasi tushunchasiga asosiy yondashuvlar, shuningdek ularning xususiyatlari tahlil qilingan. Shuningdek anoat kompleksini tashkil etishning eng samarali va oqilona shakli rivojlanish uchun yuqori salohiyatga ega bo‘lgan asosiy ishlab chiqarish tarmoqlari asosida klaster tizimlarini shakllantirish yo‘llari ko ‘stilgan.*
Kalit so‘zlar*: sanoat, sanoat majmuasi, klaster tizimi, texnopolis, texnopark, innovatsiya, ishlab chiqarish, mintaqa, innovatsion muhit, tarmoq.*
Аннотация. *В статье рассматриваются институциональные, правовые и теоретические основы развития кластеров в промышленности. Промышленный комплекс региона оценивался по уровню индивидуального качества. Производство эффективного комплекса организации производства направлено на создание производственных систем высокого уровня для эффективного и качественного производства.*
Ключевые слова: *промышленность, промышленный комплекс, кластерная система, технополис, технопарк, инновации, производственный комплекс, инновационная среда, отрасль.*
Abstract. *The article discusses the institutional, legal and theoretical foundations for the development of clusters in industry. The industrial complex of the region was assessed according to the level of individual quality. The production of an effective production organization complex is aimed at creating high-level production systems for efficient and high-quality production.*
Keywords: *industry, industrial complex, cluster system, technopolis, technopark, innovation, industrial complex, innovative environment, industry.*

Kirish. Respublikamiz iqtisodiyotining innovatsion rivojlanishi hozirgi kunda har bir mamlakatning boshqaruv organi oldida turgan asosiy maqsadlardan biri hisoblanadi. Innovatsion rivojlanishni yanada takomillashtirish mamlakatning jahon bozoridagi o‘rnini mustahkamlash imkonini beradi. Mamlakatimiz sanoatida ishlab chiqarilgan mahalliy mahsulotlarni jahon bozoridagi mavqeini ko‘tarish hisobiga, talabni ko‘paytirish, ishlab chiqarish hajmini kengaytirish va iqtisodiy o‘sishni ta’minlashga zamin yaratadi. Milliy iqtisodiyot tarmoqlari tarkibida innovatsion rivojlanishni klasterlar asosida ta’minlash murakkab jarayon bo‘lib, tizimli, izchil, ilmiy asoslangan chora-tadbirlarni ishlab chiqish va amalga oshirishni zaruriyatini keltirib chiqaradi. Bu masala iqtisodiyotning asosi bo‘lgan sanoat tarmog‘ining doimiy diqqat markazida bo‘lib qoladi.[7]

Mavzuga oid adabiyotlarning tahlili Qalmuratov B. (2019) sanoat korxonalarinig innovatsiyon salohiyatini rivojlantirishni ayrim muammolarga e’tibor qaratilgan[6]. Qalmuratov B.(2023) Qoraqalpog‘ston sanoat ishlab chiqarish sohasining rivojlanish tendentsiyalarini tahlil qilgan [5]. Kurpayanidi K. va boshqalar. (2020) O‘zbekistonda raqobatbardosh milliy innovatsion

tizimni shakllantirish masalasi tahlil qilingan. Abdullayev, A. M., & Kurpayanidi, K. I. (2020) sanoat korxonalarida innovatsion boshqaruv metodoligiyasi va mexanizmlari tadqiq qilingan.

Tadqiqot metodologiyasi. Tadqiqotda tizimli tahlil, sintez, statistik guruhlash, ekspert baholari va boshqa usullardan foydalanilgan.

Tahlil va natijalar. Sanoat kompleksi deganimizda-bu iqtisodiy faoliyatning ayrim turlarining yig‘indisi, ishlab chiqarilayotgan mahsulotlarning iqtisodiy maqsadlarining birligi, iste’mol qilinadigan materiallarning bir xilligi, texnik baza va texnologik jarayonlarning umumiyligi, maxsus professional kadrlar tarkibi va o‘ziga xos ish sharoitlari bilan tavsiflanadigan korxonalar majmui tushuniladi.

Sanoat majmuasining tarmoq tuzilishi deganda sanoat majmuasining umumiy hajmidagi tarmoqlarning ulushi tushuniladi. Sanoatning tarmoq tarkibi doimiy ravishda o‘zgarib turadi. Unga turli omillar ta‘sir qiladi. Avvalo, ilmiy-texnik taraqqiyotning rivojlanishi. Aynan shu omil ta‘siri ostida yangi sanoat va ishlab chiqarish tarmoqlari shakllanmoqda. Bundan tashqari, sanoat kompleksi tarkibidagi o‘zgarish dinamikasiga davlatning iqtisodiy siyosati ta‘sir qiladi.

Rivojlanishning hozirgi bosqichida mintaqaviy darajada sanoat ishlab chiqarishni tashkil etishga turli xil yondashuvlar mavjud. Hozirgi vaqtda bu masala etarlicha ishlab chiqilganiga qaramay, mintaqaviy sanoat kompleksini tashkil etishning asosiy shakllari tushunchalari va xususiyatlarini talqin qilishda ma‘lum farqlar mavjud. Mintaqaviy sanaot majmuasi tushunchasiga asosiy yondashuvlar, shuningdek ularning xususiyatlari 1-jadvalda keltirilgan.

Hozirgi vaqtda mamlakatimizda klasterlar asosida sanoat tarmog‘i korxonalaridagi innovatsion rivojlanish yo‘llari xususida ilmiy izlanishlar va ishlab chiqarishning o‘zaro uyg‘unligiga doir masalalar to‘la tadqiq qilinmagan. Jumladan, klasterlarning hozirgi sharoitida undagi innovatsion jarayonlarni boshqarish nazariyasi va amaliyoti nuqtai nazaridan yetarli darajada o‘rganib chiqilmayapti. Bu borada tabiiyki fan, ta’lim va ishlab chiqarish integratsiyasi muhim vazifadir.

O‘zbekiston Respublikasining 2020-yil 24-iyuldagi “Innovatsion faoliyat to‘g‘risida”gi O‘RQ 630-son qonuniga muvofiq “Innovatsion klaster tegishli hududda innovatsiyalarni yaratishda ishtirok etuvchi innovatsion faoliyat subyektlarining, innovatsion faoliyat natijalari iste’molchilarining yig‘indisi sifatida yuridik shaxs tashkil yetmasdan tuziladi va ushbu subyektlarning, iste’molchilarning asosiy maqsadi samarali hamkorlik qilishdan, quvvatlardan birgalikda foydalanishdan hamda bilimlar, ko‘nikmalar almashishdan, shuningdek texnologiyalar transfertiga ulushni ta’minlash orqali innovatsion faoliyatni rag‘batlantirishdan iborat bo‘ladi” deya ta’rif berilgan [1].

Klaster usuli iqtisodiyotning asosiy va bir-biriga bog‘liq tarmoqlarini muvaffaqiyatli rivojlantirish, texnologik jarayonlarni optimallashtirish, xom ashyo, energetik, ishlab chiqarish va mehnat resurslaridan samarali foydalanish imkonini beradi.2018-2022-yillarda O‘zbekistonda iqtisodiy o‘sish drayverlari bo‘lgan 506 ta klaster tashkil etildi. Bu esa so‘nggi besh yil ichida mahsulot ishlab chiqarish hajmini 32 barobarga oshirish va 28,7 trln. so‘mga yetkazish imkonini berdi.

Bunday natijaga erishishda 2018-2022-yillarda klasterlarni rivojlantirish uchun yo‘naltirilgan investitsiyalar hajmining 5,2 baravar, sohada band bo‘lganlar sonining 2,5 baravar ortishi yordam berdi. 2019-yilda mamlakatning sanoat mahsulotlari eksportida klasterlarning ulushi 5 foizni tashkil etgan bo‘lsa, 2022-yilda 11,4 foizga yetdi[8].

	Sanoatni tashkil etish shakli	**Afzalliklari**	**Kamchiliklari**	**Faoliyat natijalari**	**Asosiy ishtirokchilar**
1.	Hududiy sanoat kompleksi	- xom ashyo qazib olishdan tayyor mahsulotni sotishgacha bo‘lgan barcha tadbirlarni rejalashtirishning aniq tuzilishi; - bu butun ishlab chiqarish zanjiri	- ilmiy tashkilotlarning mavjudligini nazarda tutmaydi; - past harakatchanlik (qobiliyatsizlik. Bozor holatining o‘zgarishiga tezda javob bering); - innovatsiyalarni rivojlantirishni nazarda tutmaydi	Butun mahulot ishlab chiqarih jarayonida texnologik zanjir	Muayyan mahsulotlarni ishlab chiqaradigan vertikal integratsiyalashgan korxonalar guruhi
2.	Texnopolis	- ilmiy bilimlarni shakllantirishdan tortib to sotiladigan mahsulotlarni sotishgacha bo‘lgan butun innovatsion zanjirni o‘z ichiga oladi	- oddiy, yig‘ish funktsiyalarini bajarishga yo‘naltirish; - akademik tashkilotlar va korxonalar o‘rtasida aloqa o‘rnatishda qiyinchilik; - yirik korporatsiyalar o‘zlarining ilmiy-tadqiqot salohiyatini tarqatish manbasiga aylanmaydilar	Yangi texnologiyalarni ishlab chiqish, shuningdek mavjud innovatsion mahsulotlar texnologiyalari asosida ishlab chiqarish	ilmiy-ta‘lim muassasalari, infratuzilma tashkilotlari, innovatsion mahsulotlar ishlab chiqarishga yo‘naltirilgan ishlab chiqarish korxonalari, madaniy-maishiy infratuzilma
3.	Klaster	- ishlab chiqarish zarurligini hisobga oladigan mobil tuzilma; - resurslarni birlashtirish tufayli tranzaktsion xarajatlarni kamaytirish; - sinergiya effekti paydo bo‘ladi; - innovatsiyalarni qabul qilish	- ixtisoslashuv mintaqaning zaifligini keltirib chiqarishi mumkin; - tizimning yopiq ta‘siri ehtimoli; - ishlab chiqarishning pasayishiga olib keladigan o‘zini o‘zi ta‘minlash sindromi ehtimoli	Ishlab chiqarish va ishlab chiqarishning kompleks tizimi	kichik va yirik korxonalar guruhi, hokimiyat vakillari, ilmiy va o‘quv yurtlari, notijorat tashkilotlar, innovatsion infratuzilma ob‘ektlari

4.	Innovatsion rivojlanish hududi	- fan va ta‘lim rivojlanishning ustuvor vazifalari sifatida tasdiqlangan; - Qonunchilik darajasida innovatsiyalarni ishlab chiqish va amalga oshirishni qo‘llab-quvvatlash	- normativ-huquqiy baza zarur shartlarga javob bermaydi; - yuqori texnologiyali mahsulotlarga sarmoya kiritishning samarali mexanizmlarining yo‘qligi	Innovatsion mahsulotlar ishlab chiqarish	innovatsion mahsulotlar va xizmatlar ishlab chiqaradigan kichik korxonalar

Iqtisodiyotni yanada rivojlantirish, mahsulot ishlab chiqarish hajmi va sur’atini oshirish, tarmoqlararo kooperatsiyani kengaytirish, qayta ishlash sanoatida samaradorlikni oshirish maqsadida tarmoqlar va hududlarda bir qator yangi ishlab chiqarish klasterlarini tashkil etish ko‘zda tutilgan. Xususan:

— yirik sanoat korxonalari negizida 6 ta kimyo-texnologiya klasteri;

— yengil avtomobillar, yuk mashinalari, avtobuslar, qishloq xo‘jaligi texnikasini ishlab chiqaruvchi korxonalarni ham o‘z ichiga olgan mashinasozlik klasterlari;

— Toshkent viloyatida 41 ta sanoat klasteri;

— elektromobillar uchun butlovchi qismlar va materiallar ishlab chiqarishni lokalizatsiya qilish bo‘yicha elektromobil klasteri;

— Sho‘rtan majmuasi doirasida gaz-kimyo klasteri, shuningdek, mamlakatning barcha hududlaridagi boshqa klasterlar.

Mahalliy ishlab chiqaruvchilar va iste’molchilarni qo‘llab-quvvatlash maqsadida tegishli subsidiyalar va imtiyozlar taqdim yetildi. 2023-2024-yillarda qishloq xo‘jaligi texnikasi xaridlarini moliyalashtirish uchun 2,6 trln. so‘m miqdorida mablag‘ yo‘naltirish ko‘zda tutilgan.

Sanoat kompleksini tashkil etishning eng samarali va oqilona shakli rivojlanish uchun yuqori salohiyatga ega bo‘lgan asosiy ishlab chiqarish tarmoqlari asosida klaster tizimlarini shakllantirish bo‘lishi mumkin. Ushbu tanlov klasterning quyidagi asosiy afzalliklari bilan belgilanadi:

Birinchidan, ushbu turdagi birlashmalar hududiy-sanoat komplekslari, texnopolislar, innovatsion rivojlanish hududlari kabi ishlab chiqarish tuzilmalarining xususiyatlarini birlashtiradi. Shunga o‘xshash kombinatsiyaga qaramay, klaster ishlab chiqarish ehtiyojlarining o‘zgarishiga tezda javob bera oladigan mobil tuzilmadir.

Ikkinchidan, klaster mintaqada innovatsion muhitni rivojlantirishning eng samarali usullaridan biridir. Ularning yaratilishi birlashmaning barcha ishtirokchilarining innovatsion faolligini oshirishga yordam beradi. Biroq, shunga qaramay, ishlab chiqarish klasterini tashkil etish majburiy ilmiy-tadqiqot ishlarini nazarda tutmaydi.

Uchinchidan, klaster mintaqada mavjud bo‘lgan ishlab chiqarish salohiyati (texnologik zaxira, resurs va xom ashyo bazasi) asosida tashkil etilishi mumkin.

To‘rtinchidan, mintaqa sanoatini klasterli tashkil etishning muhim afzalligi ishlab chiqarish xarajatlarini tejashdir. Bunga, boshqa narsalar qatori, klaster ishtirokchilari tashkilotlarining bevosita o‘zaro ta‘siri natijasida yuzaga keladigan tranzaktsion xarajatlarni kamaytirish orqali erishish mumkin.

Klaster yondashuvi butun dunyo bo‘ylab mintaqaviy siyosatning eng samarali vositasi sifatida tan olingan. Klaster yondashuvini amalga oshirish bo‘yicha faoliyat klasterlash deb belgilanishi mumkin va korxonalarni klasterlarga birlashtirish va ular o‘rtasida norasmiy munosabatlar va tarmoq hamkorligini o‘rnatish maqsadida davlat va jamoat institutlari tomonidan amalga oshiriladigan tashkiliy-iqtisodiy tadbirlar majmui hisoblanadi. Ishlab chiqarish hududiy klasterlarini shakllantirish murakkab va uzoq jarayon bo‘lib, sanoat faoliyatining ko‘plab subyektlari tomonidan ko‘p harakatlarni o‘z ichiga oladi

Bizning fikrimizcha, klaster loyihasini ishlab chiqish uch bosqichni o‘z ichiga oladi: tayyorgarlik, asosiy va yakuniy. Mavjud tajribani o‘rganish shuni ko‘rsatdiki, sanoat majmuasida klasterlar yaratish uchun quyidagi shartlarga rioya qilish kerak:

— kooperativ hamkorlikka ega, jadal rivojlanishdan manfaatdor bo‘lgan kompaniyalar;

— muayyan ishlarni autsorsingga qabul qila oladigan tor ixtisoslashgan kichik biznesning mavjudligi;

— ilmiy baza hududida, shuningdek ishchi kuchi, tegishli vakolat va boshqa ishlab chiqarish resurslarining mavjudligi;

— ishlab chiqarish va innovatsion infratuzilma: texnoparklar, biznes-inkubatorlar, klasterlarni rivojlantirish markazlari;

— jamoat tashkilotlarining mavjudligi (JT, uyushmalar va boshqalar.);

— sanoat kompleksini rivojlantirish bo‘yicha strategik rejalarning mavjudligi.

Klasterlarning shakllanishi tabiiy jarayondir. Shunga ko‘ra, davlat ularning mustaqil paydo bo‘lishi uchun qulay shart-sharoitlarni yaratishi kerak.

Turli mamlakatlarning tajribasi klasterlarni yaratish, rivojlantirish va rag‘batlantirishning yagona mexanizmlari yo‘qligidan dalolat beradi. Binobarin, ushbu yondashuv asosida mintaqa iqtisodiyotini modernizatsiya qilish uchun zamonaviy ijtimoiy-iqtisodiy sharoitlar sanoat kompleksi vakillarining tashabbuslarini qo‘llab-quvvatlaydigan.

Klasterni shakllantirish juda uzoq jarayon bo‘lib (Silikon vodiysi XX-asrning 40-yillarida klaster sifatida shakllana boshlagan), bu sanoat majmuasi, hokimiyat va boshqaruv organlari, shuningdek, kichik va o‘rta biznes vakillarining ko‘plab sa‘y-harakatlarini o‘z ichiga oladi.

Klasterlarni shakllantirishning xalqaro tajribasi (masalan, Xitoyning avtomobil klasterlarini shakllantirish tajribasi) shuni ko‘rsatadiki, mintaqa birinchi navbatda bir yoki bir nechta yirik korxonalardan tashkil topgan sanoat zonalarini tashkil qiladi. Bu infratuzilmani va boshqa yordamchi ishlab chiqarishni rivojlantirish uchun ma‘lum bir to‘siq yaratadi. Yangi mahsulotni ishlab chiqishdan tortib uni bozorga chiqarishgacha bo‘lgan to‘liq ishlab chiqarish tsiklini yo‘lga qo‘yadigan yuqori malakali kadrlarni jalb qilish orqali kadrlar salohiyatini rivojlantirish muhim ahamiyatga ega.

Yaratilgan sharoitlar, o‘z navbatida, mintaqaga yirik va o‘rta biznesni jalb qiladi, yangi kompaniyalar yaratish va kichik biznesni rivojlantirish faoliyatini faollashtiradi. Sanoat-iqtisodiy kompleks yaratilgandan so‘ng, Klaster tizimlarini yaratish dasturini ishlab chiqish zarur, uning vazifasi mintaqadagi sanoat faoliyatini faollashtirish va shu bilan sanoat kompleksining samaradorligini oshirishdir.

Mamlakatimizda klaster yondashuvi haqida nisbatan yaqinda keng muhokamalar olib borilmoqda. Shu sababli, bugungi kunda mintaqaviy darajada klaster tizimlarini shakllantirish

to‘g‘risidagi ma‘lumotlar va misollar juda cheklangan miqdorda mavjud. Uzoq vaqt davomida mamlakatda klasterlar faqat mahalliy hokimiyat tashabbusi bilan rivojlandi, garchi jahon tajribasi shuni ko‘rsatadiki, samarali ishlaydigan klaster tizimlari mintaqa hukumati va boshqaruvi tomonidan bevosita qo‘llab-quvvatlanadigan biznes tashabbusi asosida qurilgan

Bugungi kunda O‘zbekistonda ishlab chiqarish klasterlarini tashkil etish va ularning asosiy faoliyatini tartibga soluvchi bir qator hujjatlar qabul qilindi. Bunday hujjatlar birinchi navbatda:

O‘zbekiston Respublikasining 2020 yil 24 iyuldagi 630-sonli “Innovatsion faoliyat to‘g‘risida”gi Qonuni;

O‘zbekiston Respublikasi Prezidentining 2022-yil 28-yanvardagi “2022-2026-yillarga mo‘ljallangan Yangi O‘zbekistonning Taraqqiiyot strategiyasi to‘g‘risida”gi PF№60-sonli Farmoni;

O‘zbekiston Respublikasi Prezidentining “Qoraqalpog‘iston Respublikasida “Nukus texnoparki” maxsus sanoat zonasini tashkil etish chora-tadbirlari to‘g‘risida”gi 2022-yil 6-iyuldagi PQ-306-son;

O‘zbekiston Respublikasi Prezidentining 2023-yil 11-sentyabrdagi «“O‘ZBEKISTON — 2030” strategiyasi to‘g‘risida» gi Farmoni, PF-158-son;

O‘zbekiston Respublikasi Prezidentining qarori, 2019-yil 12-fevraldagi “To‘qimachilik va tikuv-trikotaj sanoatini isloh qilishni yanada chuqurlashtirish va uning eksport salohiyatini kengaytirish chora-tadbirlari to‘g‘risida” gi Qarori PQ-4186-son;

O‘zbekiston Respublikasi Prezidentining 2019-yil 20-fevraldagi “Qurilish materiallari sanoatini tubdan takomillashtirish va kompleks rivojlantirish chora-tadbirlari to‘g‘risida” gi Qarori PQ-4198-son;

O‘zbekiston Respublikasi Prezidentining qarori, 2019-yil 16-sentyabrdagi “Yengil sanoatni yanada rivojlantirish va tayyor mahsulotlar ishlab chiqarishni rag‘batlantirish chora-tadbirlari to‘g‘risida”gi Qarori PQ-4453-son;

O‘zbekiston Respublikasi Vazirlar Mahkamasining 2021-yil 27-avgustdagi “Ilmiy va innovatsion faoliyatni boshqarish tizimini tashkil etish chora-tadbirlari to‘g‘risida”gi Qarori PQ 545-son;

O‘zbekiston Respublikasi Prezidentining Farmoni, 2022-yil 6-iyuldagi “2022 — 2026-yillarda O‘zbekiston Respublikasining innovatsion rivojlanish strategiyasini tasdiqlash to‘g‘risida” gi PF-165-son;

Vazirlar Mahkamasining “O‘zbekiston Respublikasida “Klaster” va “Klaster siyosati”ning yagona konsepsiyasi to‘g‘risida”gi qarori.

Tavsiya va xulosalar. Sanoat klasterlarini shakllantirishning xorijiy tajribasini tahlil qilish O‘zbekiston Respublikasida klasterlar yaratishda ham qo‘llanilishi mumkin bo‘lgan universal mexanizmlarni ajratib ko‘rsatishga imkon berdi.

Birinchidan, aksariyat hollarda ishlab chiqarish klasterlarini yaratish sanoatni yoki aniq tarmoqlarni rivojlantirishning uzoq muddatli strategiyalarini ishlab chiqish va amalga oshirish natijasida yuzaga keldi, ularning asosiy vazifasi sanoatni qo‘llab-quvvatlash yedi.

Ikkinchidan, klasterlar faqat ishlab chiqarish zanjirining har bir bosqichida barcha zarur ishlab chiqarish jarayonini ta‘minlay oladigan kuchli resurs bazasiga ega bo‘lgan mintaqalarda yaratilgan

Uchinchidan, mintaqada klasterlarning shakllanishi va rivojlanishini ta‘minlash uchun hududni, shu jumladan ishlab chiqarish infratuzilmasini kompleks rivojlantirish zarur.

To‘rtinchidan, mintaqada moliya-kredit institutlari tizimini rivojlantirish zarur. Investitsion faoliyatni faollashtiradigan va qo‘shimcha mablag‘larni jalb qiladigan qulay iqlimni yaratish juda muhimdir.

Amaliyot shuni ko‘rsatadiki, klasterlar, texnoparklar va boshqalar kabi murakkab iqtisodiy tizimlarni shakllantirish davlat hokimiyati va boshqaruvi organlari tomonidan muvofiqlashtirishni faol qo‘llab-quvvatlamasdan mumkin emas. Mamlakat iqtisodiyotini qo‘llab-quvvatlashning asosiy yo‘nalishlari va funktsiyalari ko‘pincha davlat va mintaqaviy darajadagi strategik hujjatlarda aks yetadi.

Annotatsiya. *Maqolada O‘zbekistonda iqtisodiy o‘sishning yashil omili xususiyatlari, muammolari va istiqbollari, yashil iqtisodiyotga o‘tishning xalqaro tajribasi tahlil qilindi, shuningdek, O‘zbekiston Respublikasida yashil iqtisodiyotni rivojlantirishning asosiy yo‘nalishlari bayon qilindi.*
Kalit so‘zlar: *yashil omil, yashil iqtisodiyot, yashil investitsiyalar, yashil texnologiyalar.*
Abstract. *The article examines the features, problems and prospects of the green factor of economic growth in Uzbekistan, analyzes the international experience of transition to a green economy, and describes the main directions of development of the green economy in the Republic of Uzbekistan.*
Keywords: *green factor, green economy, green investments, green technologies.*

Muqaddima

Ushbu maqolaning metodologiyasida kuzatish, umumlashtirish, guruhlash, qiyosiy tahlil va nazariy izohlash usullari qo‘llaniladi. Bundan tashqari, maqolaning ilmiy asosini xalqaro standartlar va me’yoriy hujjatlar, olimlarning mamlakatimiz va xorijiy ilmiy nashrlardagi tadqiqotlari ma’lumotlari tashkil etadi.

21-asr boshining o‘ziga xos belgilaridan biri bu to‘rtinchi sanoat inqilobi bo‘lib, u yangi avlod axborot texnologiyalari asosida ishlab chiqarish sohasida tub o‘zgarishlarni nazarda tutadi. Biroq, yangi sanoat inqilobining oldingilaridan muhim xarakteristikasi va sezilarli farqi bu ekologik va iqlim muammolari dolzarbligining tez o‘sishi bo‘lib, uni haqli ravishda jahon iqtisodiyoti rivojlanishining "yashil" omili deb hisoblash mumkin.

Tahlil va natijalar

Iqlim o‘zgarishi va uning oqibatlari jahon iqtisodiyotining global barqaror rivojlanishi va dunyo aholisi farovonligi uchun ustuvor muammolar va tahdidlardir. Bu muammo iqtisodiyotning qishloq xo‘jaligi, energetika, infratuzilma va sog‘liqni saqlash kabi muhim tarmoqlariga ta’sir ko‘rsatib, o‘z navbatida yalpi ichki mahsulot ishlab chiqarishning o‘sish sur’atlariga, iqtisodiyotni modernizatsiya qilishga, pirovardida, mamlakatning ekologik va milliy xavfsizligiga salbiy ta’sir ko‘rsatmoqda [3]. Swiss Re Institute hisobotiga ko‘ra, kelgusi 30 yil ichida jahon iqtisodiyoti 18 foizga qisqarishi mumkin. Xususan, 3,2°C harorat ko‘tarilishining eng yomon stsenariysi ostida Xitoy asrning o‘rtalariga kelib YaIMning deyarli chorak qismini (24%) yo‘qotishi mumkin. AQSh, Kanada va Buyuk Britaniyada yo‘qotishlar 10% atrofida bo‘ladi. Evropa biroz ko‘proq (11%) ta'sir qiladi, Finlyandiya yoki Shveytsariya kabi mamlakatlar esa, masalan, Frantsiya yoki Gretsiyaga (13%) qaraganda kamroq xavf ostida (6%).

Yashil va barqaror iqtisodiy o‘sishga erishish uchun jahon hamjamiyati iqlim o‘zgarishi va uning salbiy oqibatlariga qarshi kurashish bo‘yicha strategiya va chora-tadbirlarni faol amalga oshirmoqda.

1. Parij kelishuvi. 2015-yil 12-dekabrda Parijda bo‘lib o‘tgan BMTning Iqlim o‘zgarishi bo‘yicha doiraviy konventsiyasiga a’zo davlatlar konferensiyasining 21-sessiyasida 196 ta davlat iqlim o‘zgarishi bo‘yicha kelishuvni qabul qilgan bo‘lib, undan ko‘zlangan maqsad global o‘rtacha haroratni Selsiy bo‘yicha 1,5 darajagacha oshirishdan iborat. Shartnoma 2016 yil 4 noyabrda kuchga kirdi.

2. Barqaror rivojlanish uchun 2030 kun tartibi. 2015-yilda barcha mamlakatlarning jahon yetakchilari Birlashgan Millatlar Tashkiloti tomonidan taklif etilgan 2030-yilgacha bo‘lgan davr uchun Barqaror rivojlanishning 17 ta maqsadini qabul qildi. Dastur qashshoqlikni bartaraf etish, tengsizlikni kamaytirish va sayyoramizni himoya qilishga qaratilgan 17 ta maqsad, 169 ta maqsad va 230 ta ko‘rsatkichni o‘z ichiga oladi [5]. Dastur uchta asosiy element prizmasi orqali ko‘rib chiqiladi: ijtimoiy integratsiya, iqtisodiy o‘sish va atrof-muhitni muhofaza qilish; va beshta muhim o‘lchovga asoslanadi: odamlar, farovonlik, sayyora, hamkorlik va tinchlik, 5Ps deb ham ataladi.

Dunyoning aksariyat davlatlari asta-sekin yashil iqtisodiyotga o‘tishmoqda, bu erda ekologiya taraqqiyotning harakatlantiruvchi kuchi hisoblanadi. Yashil iqtisodiyot kontseptsiyasi so‘nggi yigirma yil ichida paydo bo‘ldi va barqaror rivojlanish konsepsiyasi bilan chambarchas bog'liq. Amaliyot shuni ko‘rsatadiki, barqaror iqtisodiy o‘sish daromadni oshirishning yagona manbai va shunga mos ravishda to‘plangan ekologik zararni bartaraf etish uchun investitsiyalar, ishlab chiqarishni "yashil" modernizatsiya qilish, bu birlamchi resurslar unumdorligini oshirishga va natijada iqtisodiyotning resurs zichligi va atrof-muhitning hayotni qo‘llab-quvvatlovchi ekotizimlariga yukni kamaytirishga yordam beradi [6]. “Yashil iqtisodiyot” atamasi birinchi marta 1989 yilda ilmiy muomalaga kiritilgan. Yashil iqtisodiyotning yagona ta’rifi mavjud bo‘lmasa-da, u inson farovonligi va ijtimoiy tengligini yaxshilaydigan, ekologik xavflarni va ekologik resurslarning taqchilligini sezilarli darajada kamaytiradigan, atrof-muhit degradatsiyasisiz barqaror rivojlanishga yo‘naltirilgan iqtisodiyotni anglatadi, degan umumiy tushuncha mavjud [7].

2019 yil oxirida Yevropa Ittifoqi 2050 yilgacha uglerod neytralligiga erishishni maqsad qilgan Yevropa yashil kelishuvini ishga tushirdi. Ushbu maqsadga erishish uchun Yevropa Ittifoqi iqtisodiyotining barcha tarmoqlaridan kelishilgan harakatlar talab etiladi, jumladan [8]:

- ekologik toza texnologiyalarga sarmoya kiritish
- innovatsiyalarni joriy etishda sanoatni qo‘llab-quvvatlash
- xususiy va jamoat transportining toza, arzon va sog'lom shakllarini joriy etish
- energetika sohasini karbonsizlantirish
- binolarning energiya samaradorligini oshirish
- global ekologik standartlarni yaxshilash uchun xalqaro hamkorlar bilan ishlash.

Yevropa Yashil bitimi shuningdek, 2030 yilga kelib issiqxona gazlari emissiyasini 40% dan kamida 55% gacha (1990 yil darajasiga nisbatan) kamaytirish bo‘yicha oraliq maqsadni ham o‘z ichiga oladi [8].

Shu maqsadda “Yo‘l xaritasi” – Yevropa Ittifoqining iqlim betarafligiga o‘tish bo‘yicha asosiy yo‘nalishlari va harakatlarini belgilovchi asosiy hujjat qabul qilindi. U zarur investitsiyalar va mavjud moliyalashtirish vositalarini tavsiflaydi hamda yashil iqtisodiyotga o‘tishdan eng ko‘p jabrlanganlarga yordam berish uchun adolatli va inklyuziv o‘tishni qanday ta’minlash kerakligini tushuntiradi. Yashil kurs iqtisodiyotning barcha tarmoqlarini, xususan, transport, energetika, qishloq xo‘jaligi va qurilishni qamrab oladi.

Xitoy Xalq Respublikasi dunyoning qudratli davlatlaridan biri sifatida atrof-muhitni muhofaza qilish masalalarida ham sezilarli yutuqlarga erishdi. So‘nggi yillarda Xitoy bir qator

qonunchilik, siyosiy, tartibga solish va iqtisodiy tashabbuslarni ishlab chiqqan davlat uchun atrof-muhit masalalarini ustuvor vazifa qilib qo‘ydi.

Xitoy raisi Si Tszinpin BMT Bosh Assambleyasining 75-sessiyasidagi nutqida Xitoy “2030 yilgacha CO2 emissiyasining eng yuqori cho‘qqisiga chiqish va 2060 yilgacha uglerod neytralligiga erishish” niyatida ekanini aytdi. Shuni ta'kidlash kerakki, bugungi kunda Xitoy dunyodagi eng yirik energiya iste'molchisi bo‘lib, har yili barcha uglerod chiqindilarining chorak qismidan ko‘prog'ini ishlab chiqaradi va bu mamlakatni dunyodagi etakchi ifloslantiruvchi davlatlardan biriga aylantiradi. Biroq, Xitoyning karbonat angidrid emissiyasi intensivligi 2020 yilda 2015 yilga nisbatan 18,8 foizga va 2005 yilga nisbatan 48,4 foizga kamaydi. Shuningdek, 2021-yil oktabr oyi oxiriga kelib Xitoyda qayta tiklanadigan energiya manbalarining o‘rnatilgan quvvati ming gigavattga – bir teravattga yetdi. Bu 2015-yil oxiriga nisbatan ikki barobar ko‘pdir. Milliy energiya ishlab chiqarish tuzilmasida qayta tiklanadigan energiya manbalarining ulushi 2015 yil oxiriga nisbatan 10,2 foizga oshib, 43,5 foizga yetdi [9].

O‘zbekiston iqlim o‘zgarishiga eng zaif davlatlar qatoriga kiradi. Yaqin kelajakda butun mamlakat bo‘ylab, ayniqsa uning g‘arbiy qismida havo haroratining oshishi va qurg‘oqchilikning boshlanishi tezlashishi kutilmoqda. Mamlakatimizda ham “yashil iqtisodiyot”ni rivojlantirish bo‘yicha kompleks chora-tadbirlar amalga oshirilmoqda, ular iqtisodiyotning bazaviy tarmoqlarini modernizatsiya va diversifikatsiya qilish, muvozanatli ijtimoiy-iqtisodiy hududlarni rivojlantirish. Bu yo‘nalishdagi ishlar 2020-yil boshida, 2019-yil oktabr oyida “2019-2030-yillarda O‘zbekiston Respublikasining yashil iqtisodiyotga o‘tish strategiyasi” tasdiqlanganidan keyin boshlangan. Strategiyani ishlab chiqish jarayonida mamlakatni barqaror rivojlantirish sohasida maqsad va vazifalarga erishishga to‘sqinlik qilayotgan quyidagi muammolar aniqlandi[1]:

1. Tezlashtirilgan sanoatlashtirish va aholi sonining o‘sishi iqtisodiyotning resurslarga bo‘lgan ehtiyojini sezilarli darajada oshiradi, shuningdek, atrof-muhitga salbiy antropogen ta'sirni va issiqxona gazlari chiqindilarining o‘sishini oshiradi;
2. Iqtisodiyotning energiya samaradorligining past darajasi;
3. Tabiiy resurslardan noratsional foydalanish;
4. Texnologiyaning sekin yangilanishi;
5. “yashil” iqtisodiyotni rivojlantirish bo‘yicha innovatsion yechimlarni joriy etishda kichik biznes sub’yektlarining sust ishtiroki.

Strategiyada O‘zbekiston Respublikasini “yashil” iqtisodiyotga o‘tishning asosiy vazifalari belgilab berildi:

• texnologik modernizatsiya va moliyaviy mexanizmlarni rivojlantirish orqali iqtisodiyotning energiya samaradorligini oshirish va tabiiy resurslardan oqilona foydalanish;

• davlat investitsiyalari va xarajatlarining ustuvor yo‘nalishlariga ilg‘or xalqaro standartlarga asoslangan “yashil” mezonlarni kiritish;

• o‘tish hududlarida pilot loyihalarni amalga oshirishga ko‘maklashish

davlat rag‘batlantirish mexanizmlarini rivojlantirish, davlat-xususiy sheriklik va xalqaro moliya institutlari bilan hamkorlikni kengaytirish orqali “yashil” iqtisodiyot;

• ta’limga investitsiyalarni rag‘batlantirish, yetakchi xorijiy ta’lim muassasalari va ilmiy markazlari bilan hamkorlikni kuchaytirish orqali “yashil” iqtisodiyotda mehnat bozori bilan bog‘liq kadrlarni tayyorlash va qayta tayyorlash tizimini rivojlantirish;

• Orolbo‘yi mintaqasida ekologik inqirozning salbiy ta'sirini yumshatish choralarini ko‘rish;

• yashil iqtisodiyot sohasida xalqaro hamkorlikni, shu jumladan ikki tomonlama va ko‘p tomonlama shartnomalar tuzish orqali mustahkamlash.

Strategiyani amalga oshirishning maqsadli ko‘rsatkichlari orasida quyidagilarni ajratib ko‘rsatish mumkin [2]:

• yalpi ichki mahsulot birligiga to‘g'ri keladigan issiqxona gazlarining solishtirma chiqindilarini 2010 yil darajasidan 10 foizga kamaytirish;

• energiya samaradorligi indeksini ikki baravar oshirish va yalpi ichki mahsulotning uglerod intensivligini pasaytirish;

• qayta tiklanuvchi energiya manbalarini yanada rivojlantirish, ularning ulushini elektr energiyasi ishlab chiqarishning umumiy hajmida 25 foizdan ortiqroqqa oshirish;

• aholi va iqtisodiyot tarmoqlarining 100% gacha zamonaviy, arzon va ishonchli energiya ta'minotidan foydalanishini ta'minlash;

• sanoat korxonalari infratuzilmasini modernizatsiya qilish, energiya samaradorligini kamida 20 foizga oshirish orqali ularning barqarorligini ta’minlash va toza va ekologik toza texnologiyalar va sanoat jarayonlaridan kengroq foydalanish.

2021-yil mart oyida O‘zbekiston Respublikasining yashil iqtisodiyotga o‘tish mexanizmlarini belgilab bergan “Yangi imkoniyatlar sari: O‘zbekistonning COVID-19 koronavirus pandemiyasidan keyin yashil tiklanishi” xalqaro onlayn-forumi bo‘lib o‘tdi. Forumda Birlashgan Millatlar Tashkiloti Taraqqiyot dasturi tomonidan tayyorlangan “Yashil tiklanish va O‘zbekistonning yashil iqtisodiyotga o‘tishi” nomli tahliliy notaning qisqacha sharhi taqdim etildi. Hujjatda yashil rivojlanishning ustuvor tarmoqlari, ularning imkoniyatlari va muammolari aniqlandi va tahlil qilindi. Shuningdek, “Yashil iqtisodiyot” milliy strategiyasini amaliy amalga oshirishga hissa qo‘shishi mumkin bo‘lgan ustuvor yashil strategiyalar, chora-tadbirlar va amaliyotlar ro‘yxati taqdim etildi.

Xulosa va takliflar

O‘zbekiston Respublikasida yashil iqtisodiyotni rivojlantirishning birinchi navbatda e’tibor talab qiladigan asosiy yo‘nalishlari qatorida quyidagilarni ajratib ko‘rsatishimiz mumkin:

1. “Yashil” iqtisodiyot sohasida qonunchilik bazasini yaratish. Bugungi kunda O‘zbekistonda yashil iqtisodiyot sohasida aniq qonunchilik bazasi mavjud emas. Barqaror rivojlanishga o‘tishda ekologik qonunchilikni yanada rivojlantirish va atrof-muhit masalalarida ilg‘or tajribalarni qo‘llash muhim ahamiyatga ega.

2. Toza texnologiyalarni joriy etish. "Toza texnologiyalar" tushunchasi beshta texnologiya guruhini o‘z ichiga oladi:

• qayta tiklanadigan energiya manbalari (fotovoltaiklar, shamol energiyasi, biomassa, bioyoqilg'i, biogaz, quyosh issiqlik energiyasi) va muqobil energiya;

• ekologik toza transport (muqobil yoqilg'ilar, gibridlar va elektromobillar);

• elektr energiyasini boshqarish tizimlari (energiya tejash, aqlli energiya tizimlari, energiya samaradorligi);

• chiqindilar, chiqindilar, tashish, yig'ish, chiqindilarni utilizatsiya qilish va qayta ishlashni boshqarish;

• innovatsion zamonaviy materiallar va texnologiyalar (biologik texnologiyalar, nanotexnologiyalar, ekologik toza materiallar) [10].

Energiya, suv va yerdan foydalanishda arzon, arzon yashil texnologiyalardan foydalanish yashil iqtisodiyotni yaratish yo‘lidagi dolzarb vazifadir. Yashil texnologiyalarning keng tarqalishi

suv resurslaridan barqaror foydalanish bo‘yicha davlat dasturlarini sezilarli darajada soddalashtiradi, tabiiy ekotizimlar yukini kamaytiradi, uy xo‘jaliklari xarajatlarini kamaytiradi va aholi turmush sifatini oshiradi.

3. Yashil investitsiyalarni qo‘llash. Moliya bozori segmenti sifatida “yashil” moliyalashtirish hali boshlang‘ich bosqichida bo‘lishiga qaramay, “yashil” kreditlar, “yashil” obligatsiyalar, fondlar kabi moliyaviy vositalar

“Yashil” investitsiyalar va “yashil” fond indekslari jadal rivojlanmoqda. Ekspertlarning hisob-kitoblariga ko‘ra, 2030 yilga borib dunyo "yashil" loyihalarni amalga oshirishi uchun taxminan 93 trillion dollar ajratiladi [11], bu tegishli moliyaviy vositalardan keng foydalanishni talab qiladi.

DOES FOREIGN OWNERSHIP IMPROVE THE CREDIT RISK MANAGEMENT?

Isakov Olmas Kuchkarovich
Affiliation: Westminster International University in Tashkent
Position: Lecturer and PhD candidate
https://doi.org/10.5281/zenodo.14842622

Abstract. *This paper examines the main determinants of non-performing loans (NPL) in commercial banks of Uzbekistan using dynamic panel approach. The research includes the quarterly banking data for the period 2020 – 2023 and investigates whether foreign ownership improves the credit risk management while controlling for other bank-specific and macroeconomic factors. According to the findings, there is a negative association between being foreign-owned and NPL. The econometric results indicate that on average NPL rate is 0.12% lower in foreign banks compared to local ones, while holding other variables constant. These findings suggest implementing the best practices of foreign-owned banks in the field of credit risk management to the local commercial banks.*

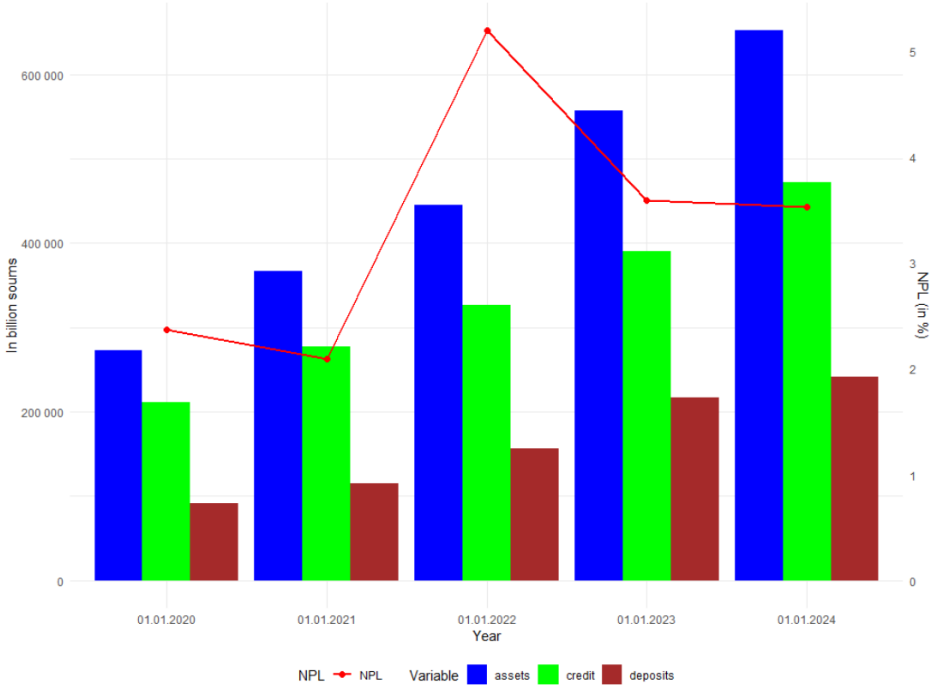
Keywords: *credit risk, non-performing loans, loan delinquency, Uzbekistan*

Introduction

Banking system of a country is one of the integral parts of the economic development. It serves as a backbone in facilitating the flow of capital and money between various stakeholders of the economy. By providing financial resources in the form of loans and credits the commercial banks expose themselves to the risk of default by the borrowers. If the banks do not take a comprehensive and prudent approach in mitigating these risks, then the consequences of not repaying the loans might have detrimental effect to the financial health of the banking system. Therefore, the banks need to take very careful approach in extending loan activities. Consequently, commercial banks take bold steps in credit risk management which is largely directed at reducing the likelihood that borrowers will default on loan repayments, especially to the extent of creating nonperforming loans (NPL). NPL is a loan that is on the brink of default due to the fact that the borrower has not made the scheduled payments for a specified period. According to banks for international settlements, a default or non-performing loan is deemed to have happened for a specific borrower if any bank credit to any financial institution is past due for more than 90 days.

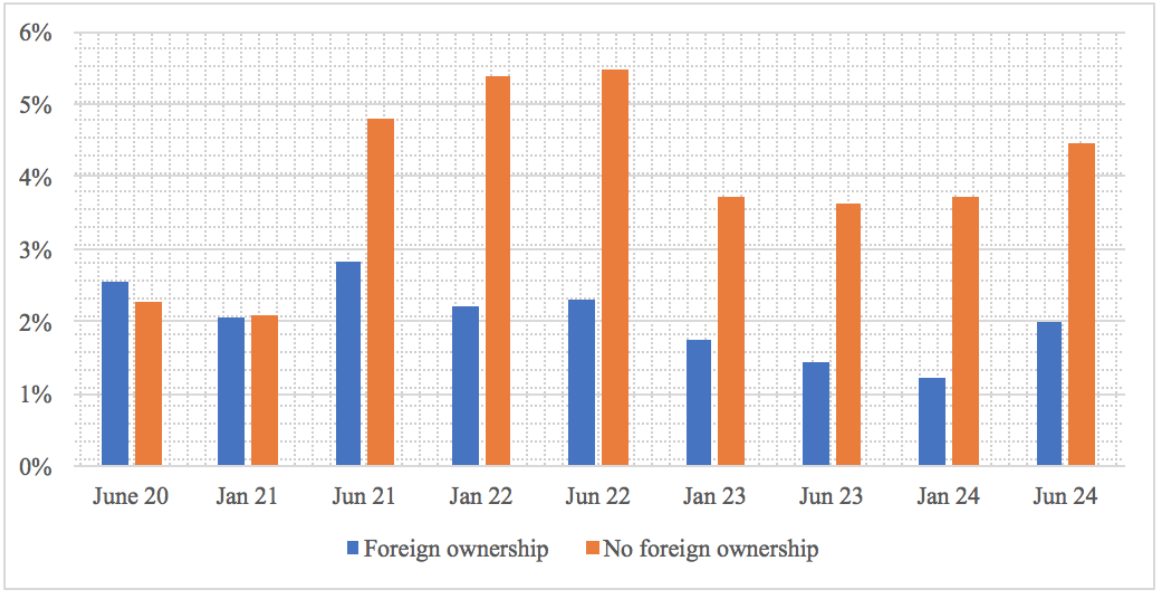
During the last 5 years, a significant growth in total outstanding credit has been observed in the banking system of Uzbekistan. As of January 1st, 2020, total credit portfolio of commercial banks amounted to 212 trillion soums which comprised of approximately 78% of their total assets. As of January 1st, 2024, total credit was grown 2.4 times and amounted to 471 trillion soums (72% of total assets). Even though the rate of growth has slowed down slightly compared to asset growth, the gap between total credit and total deposits has been widening (see Picture 1). This trend is worrisome because the loan-to-deposit ratio (LDR), which is derived by dividing total loans to total deposits, is a key indicator of a bank's liquidity and lending capacity. It measures the proportion of loans funded by deposits, and is an important factor in determining a bank's ability to meet its obligations and manage risk. If the ratio is too high, it means that the bank may not have enough liquidity to cover any unforeseen fund requirements and it suggests that a bank is over-leveraging its deposits, which can increase the risk of default, especially during economic

downturns. On the other hand, if the ratio is too low, the bank may not be earning as much as it could be. It might indicate inefficient use of deposits. But in all cases, it is safe to have this ratio under 1.



Picture 1. Comparative financial indicators of commercial banks in Uzbekistan.

The relationship between LDR and NPL has been the subject of much debate in the literature, with some studies finding a positive relationship and others finding a negative relationship. For example, a study by Demirgüç-Kunt and Huizinga (1999) found that higher LDRs were associated with higher levels of NPL in a sample of 80 countries. On the other hand, Berger and DeYoung (1997) found that higher LDRs were associated with lower levels of NPL in a sample of US banks.



Picture 2. Comparison of NPL ratios for foreign-owned and non-foreign-owned banks in Uzbekistan.

Another factor which might plays important role in explaining the growth of non-performing loans is the ownership type of the commercial banks. Several authors have reported negative association between NPL rate and having foreign ownership of the bank. The Picture 2 illustrates the comparison of NPL ratios of commercial banks with foreign ownership to banks with no foreign ownership. According to the clustered bar graph, NPL ratios have been approximately the same until January 2021 (around 2% for both types of banks).
However, this ratio has increased dramatically for banks with no foreign ownership, while the rate has been steady for foreign-owned banks. This can be explained by the following factors:

- *Enhanced risk management.* Foreign ownership can bring in international expertise and best practices in risk management, leading to improved loan underwriting standards and risk assessment processes. International banks have already gained experience in adopting best credit risk management practices and they are more cautious in lending and better equipped in identifying potential non-payment risks. They often operate under stricter governance and transparency standards imposed by their home country regulators.
- *Access to capital and liquidity.* Commercial banks with foreign ownership have broader access to capital and liquidity from overseas markets. This additional funding can strengthen the bank's balance sheet and provide a cushion to absorb potential loan losses, thus reducing the NPL ratio.

Data and Methodology

This study examines the main factors affecting the non-performing loans of commercial banks, both bank-specific factors, such as leverage, size, loan-to-deposit ratio, ownership type, as well as macroeconomic factors, such as annual GDP growth rate and exchange rate. Using panel data of 35 commercial banks of Uzbekistan on quarterly basis over the period 2019-2023, I estimate the impact of aforementioned variables on NPL.

The formula to calculate NPL can be expressed as follows:

$$NPL = \frac{Total\ non-performing\ loans}{Total\ loans} * 100\% \qquad (1)$$

NPL is taken as a dependent variable in this research and the list of independent variables along with their description is provided in Table 1.

By consolidating the quarterly data of bank-specific factors, exchange rate and annual GDP growth rates of Uzbekistan, the following descriptive statistics (see Table 2) were obtained for dependent and independent variables. This research covered the period from January 2020 to December 2023 because the Central Bank of Uzbekistan (CBU) has started releasing NPL data since 2020. According to the given summary statistics, NPL ratio has ranged from 0% to a maximum of 96% with a weighted average of 7%. The highest NPL ratios correspond to High-Tech, Turkiston and Uzagroexport banks. Since October 2022, High-Tech and Turkiston banks have ceased their operations. According to the same statistics, approximately 36% of commercial banks are state-owned and about 26% of them are operating with foreign ownership.

This research paper covers the quarterly data of all commercial banks for the period from January 2020 to December 2023. All bank-specific data and historical exchange rates were obtained from the official website of the Central Bank of Uzbekistan (https://cbu.uz/oz/statistics/bankstats) and GDP growth data were obtained from the World Bank

data (https://data.worldbank.org/country/UZ). These data were validated using other third party sources such as World Bank, IMF, Moody's BankFocus, etc.

Table 1. The description of variables being used for the analysis.

Variable	Description	Expected Sign
Dependent variable		
Non-performing loans (NPL)	Troubled loans/Total loans	
Independent variables		
Bank-specific		
Loan-deposit ratio (LDR)	Total loans/ Total deposits	Negative/Positive
Size	Natural logarithm of total assets	Negative/Positive
Leverage	Total liabilities/Total assets	Negative/Positive
State-ownership	= 1 if state ownership, 0 otherwise	Positive
Foreign-ownership	= 1 if foreign ownership, 0 otherwise	Negative
Macroeconomic		
Exchange rate	Change in UZS/USD exchange rate, %	Negative
GDP growth rate	Annual GDP growth rate, %	Negative

Considering a dynamic panel data analysis in this study helps us to examine the relationship between variables over time while taking into account individual-specific effects and potential endogeneity issues. It also allows for the inclusion of multiple time periods and considers the dynamic nature of the data, capturing both the cross-sectional and time-series dimensions. This technique became more prominent with the introduction of the Generalized Method of Moments (GMM) estimators by Arellano and Bond in 1991. They introduced a GMM estimator for dynamic panel data models, addressing issues like autocorrelation, heteroskedasticity, and the presence of lagged dependent variables. Later, Blundell and Bond (1998) proposed a system GMM estimator, which combines equations in levels and first differences to improve efficiency, especially in cases with persistent data.

Table 2. Descriptive statistics of variables used in the model. Source: Author's calculations.

Variable	*Obs*	*Mean*	*SD*	*Min*	*Max*	*Source*
NPL	493	0.07	0.15	0.00	0.96	Central Bank of Uzbekistan
LDR	493	2.06	2.83	0.00	33.49	Central Bank of Uzbekistan
Size	493	8.41	1.84	3.36	11.76	Central Bank of Uzbekistan
Leverage	493	0.74	0.23	0.00	1.00	Central Bank of Uzbekistan
State_ownership	493	0.36	0.48	0.00	1.00	Central Bank of Uzbekistan
Foreign_ownership	493	0.26	0.44	0.00	1.00	Central Bank of Uzbekistan
Exchange rate	493	0.02	0.02	-0.02	0.06	Central Bank of Uzbekistan
GDP growth	493	0.05	0.02	0.02	0.07	World Bank

The specified regression model used in the study is as follows:

$$NPL_{i,t} = \beta_0 NPL_{i,t-1} + \beta'_i X_{i,t} + \varepsilon_{i,t} \quad (2)$$

with $\varepsilon_{i,t} = \eta_i + \nu_{i,t}$

here the subscript i denotes the cross-sectional (banks) and t denotes time dimension of the panel sample. $NPL_{i,t}$ is non-performing loan ratio, $NPL_{i,t-1}$ is its lagged value, β'_i is a 1xk vector of parameters, $X_{i,t}$ is a vector of independent variables including their lagged values and $\varepsilon_{i,t}$ is the error term. $\varepsilon_{i,t}$ has two orthogonal components: η_i are the unobserved individual effects and $\nu_{i,t}$ are the observed specific errors.

I included the first order difference as proposed by Arellano and Bond (1991) to avoid the correlation between unobserved individual effects (ηi) and lagged variable (NPLt-1). Therefore, difference GMM estimations took the following equation:

$$\Delta NPLit = \beta 0 \Delta NPLit\text{-}1 + \beta' \Delta Xi,t + \Delta \varepsilon it, \quad (3)$$

where Δ is the first difference operator.

The estimation results are given on the first column of Table 3. The second column of the dataset was provided for system GMM estimations as proposed by Blundell and Bond (1998). Both models are used to address the issue of endogeneity in dynamic panel models. They are particularly useful when dealing with panel data that has a large number of cross-sectional units (e.g., banks) and relatively few time periods.

Results and Discussion

According to the STATA results in Table 3, the regression coefficient and standard errors are very similar in both models. The coefficients are approximately 0.7194 and 0.7473 for difference GMM and system GMM, respectively. While the standard errors are 0.0318 and 0.0299 in the same respect. The positive and significant coefficients in both models indicate that past values of NPL significantly influence current values of NPL. Specifically, a 1% increase in the previous period's NPL is associated with a 0.7194% (Difference GMM) and 0.7473% (System GMM) increase in the current period's NPL.

Table 3. Estimation results using difference and system GMM. Source: Author's calculations.

	Difference GMM		System GMM	
Variable	Coefficient	Std. Error	Coefficient	Std. Error
$NPL_{(i-1)}$	0.7194***	0.0318	0.7473***	0.0299
LDR	0.0017	0.0022	0.0003	0.0019
Size	-0.0027	0.0129	-0.0146	0.0117
Leverage	0.0429	0.0577	0.0664	0.0531

State-own	-	-	0.0648	0.0704
Foreign-own	-	-	-0.1222***	0.0391
Constant	-0.0533	0.101	0.0343	0.0594
Obs	421		454	
Wald Chi Square	787.67***		1145.56***	

*, **, *** indicate significance at 10%, 5% and 1%, respectively.

GDP growth rate is also found to be statistically significant in both models. Difference GMM produced a coefficient of 0.9079, while system GMM has a coefficient of 0.9225. The

positive and significant coefficients indicate that higher GDP growth is associated with higher NPL. A 1% increase in GDP growth is associated with approximately a 0.908% (Difference GMM) and 0.923% (System GMM) increase in NPL. This is counterintuitive result and in contradiction to the previous findings for other countries and periods. Chaibi and Ftiti (2015) have found negative relationship for commercial banks in Germany and France, Louzis et. al (2012) found similar relationship for Greek banks.

However, Radivojević et al (2019) have also found positive relationship between GDP growth and NPL rate for emerging economies in Latin America. The positive association between GDP growth and NPL ratio could suggest that economic growth may lead to more aggressive lending and risk-taking by banks, potentially increasing NPL. Similar theory was reported in Beck et al (2015) who studied the NPL ratios across 75 countries for over 10 years. According to their results, NPL rate was negatively correlated with real GDP growth, but positively correlated with the lagged version of GDP growth. They explain this finding with a theory that bank asset quality deteriorates with a lag in response to positive growth due to loose credit standards applied during the boom period.

According to the results in Table 3, the dummy variable for foreign ownership produced a coefficient of -0.1222 with a standard error of 0.0391. This negative and statistically significant (at 1%) coefficient indicates that foreign-owned banks tend to have lower NPL compared to commercial banks with no foreign ownership. Being a foreign-owned bank is associated with a 0.1222% decrease, on average, in NPL rate, while holding other variables constant. Several authors have reported similar negative association between these two factors and this can be understood through several key factors that highlight the strengths of foreign-owned banks in credit risk management.

This relationship is often observed in empirical research and can be attributed to various aspects of bank management, regulatory environment, and operational strategy. First of all, foreign-owned banks typically bring with them superior risk management frameworks and technological resources. The foreign-owned banks often have more advanced and sophisticated risk assessment tools developed in their home countries, where banking regulations might be stricter. They also implement cutting-edge technologies for monitoring and managing loan performance. Many studies indicate that these institutions capitalize on their international expertise to implement effective risk management practices in host countries, which helps to reduce the likelihood of loan defaults and NPL (De Haas & Van Lelyveld, 2006; Cull & Peria, 2013). Second, foreign-owned banks benefit from diversified loan portfolios, which spread risk across different sectors and regions.

This diversification reduces the impact of sector-specific economic downturns on the overall quality of the loan portfolio. Consequently, a diversified portfolio is less likely to experience high NPL ratios compared to a more concentrated portfolio (Mian, 2006). In contrast, historically, local commercial banks in Uzbekistan were established to serve a certain industry such as foreign trade, agriculture, mortgage loans, microcredits etc. This policy forced these banks to concentrate their loans into specific industry and left them exposed to higher credit risk. Even though this policy has been abandoned, the local banks still suffer from narrow concentration of their loan portfolio. Third, foreign banks usually adhere to stringent credit assessment and underwriting standards.

These banks are generally more cautious in their lending practices, ensuring that loans are granted to borrowers with lower risk profiles. This approach minimizes the probability of loans becoming non-performing. Research suggests that foreign banks' rigorous credit assessments contribute significantly to lower NPL ratios (Claessens & Horen, 2014). Finally, foreign banks often bring international management expertise and stronger corporate governance structures. These elements enhance the overall efficiency and effectiveness of the bank's operations, leading to better credit risk management and lower incidences of NPLs. High standards of corporate governance ensure that decisions are made with a long-term perspective, avoiding risky lending practices that could lead to an increase in NPLs (Micco, Panizza, & Yañez, 2007).

Other variables were not statistically significant at 10% when the dynamic econometric model was applied.

Conclusion

The research results of this dissertation allow us to provide the following conclusions:

The positive growing trend of the share of non-performing loans in the credit portfolio at lending institutions of Uzbekistan is of a concern to the financial professionals and policymakers. In order to mitigate this risk, they have to take proactive measures. One of the important aspects in tackling this issue is the implementation of a robust credit risk management system that ensures the stability and health of the lending sector.

The developed economies have been widely adopting the Basel standards. These standards provide a wide range of frameworks to mitigate the risk. Integrating them into our credit risk management practices would enhance the resilience and credibility of our financial system. Some of the BASEL regulatory frameworks that are relevant in credit risk management are risk-based capital requirements, calculation of risk-weighted assets (RWA) and set standards for financial ratios. By adopting BASEL standards, our financial institutions can improve in managing credit risk, transform into more transparent organizations, and ensure a more stable and secure banking environment. This adoption will not only strengthen our domestic financial system but also foster greater confidence among international investors and stakeholders.

The growing gap between total loans and total deposits in our financial system is increasingly concerning. In comparison, Western banks typically maintain an average loan-to-deposit ratio of around 70-80%, which is considered a healthy balance. When this ratio rises excessively, it can signal that banks are overextending themselves by lending more than they can sustain through their deposits. This can lead to liquidity issues, increased funding costs, and ultimately, a higher risk of default. For commercial banks, maintaining a balanced loan-to-deposit ratio is crucial for ensuring financial stability, managing liquidity effectively, and safeguarding their overall financial performance. There are several policies which can help to reduce this gap in our banking sector. To increase the supply of deposits from the population the following strategies can be implemented:

- *Building customer trust.* According to the Global Findex survey conducted by World Bank in 2021, approximately 9% of the adults with no banking account do not trust the banking system. It is very important that the banking customers trust in the financial system of our country. To build and maintain this customer trust, the financial institutions must provide reliable and high-quality services to the population through transparent and excellent cybersecurity measures.

- *Attractive interest rates and personalized banking solutions.* Offering competitive interest rates on savings accounts and time deposits can attract more customers to deposit their money in the bank. Different terms can be offered to accommodate the savers based on their financial needs. In addition, offering personalized banking solutions and advisory services can cater to the specific needs of customers, making them more likely to choose the bank for their deposits.
- *Innovative products.* Developing innovative savings products tailored to different customer segments, such as youth savings accounts, retirement savings plans, and high-yield savings options, can attract diverse groups of depositors. According to the financial inclusion survey. Approximately, 2% of the respondents in the Global Findex survey of 2021 have stated that they do not have a financial account because of religious reasons. Offering products based on Islamic financing can attract new customer base.
- *Financial literacy programs.* Educating the public about the importance of formal savings and financial planning through workshops, seminars, and online resources can encourage more people to deposit their money in banks. According to the same Global Findex survey data, less than 3% of the respondents have saved in a formal financial institution, but approximately 15% have saved using informal savings clubs. These numbers indicate that there is much work to do explaining the importance of saving in legally established institutions and not falling into scammers traps with hard-earned wealth.

Annotatsiya. *Ushbu maqolada boshqaruv xizmatlarini yanada rivojlantirish xususiyatlari, tendensiyalari va yo‘llari, raqamli iqtisodiyotning hozirgi holati va global tendensiyalari tahlil qilindi va O‘zbekistonda uni yanada rivojlantirish chora-tadbirlari taklif etildi. Shuningdek, maqolada innovatsion ekotizim xizmatlarini boshqarish bo‘yicha innovatsion infratuzilma obyektlariga nisbatan tadqiqotlar ko‘rib chiqildi. Belgilangan maqsadga erishish uchun quyidagi vazifalar hal etildi: boshqaruvga xizmat sifatida tavsif berish, uning an’anaviy menejmentdan farqlarini aniqlash va asosiy tamoyillarni belgilash; iqtisodiyotni transformatsiya qilish drayverlari bo‘lgan raqamli texnologiyalarni tahlil qilish; boshqaruv xizmati va raqamli servislar tushunchalarini bir-biriga bog‘lash, iqtisodiyotni raqamlashtirish sharoitida ularning simbiozining afzalliklarini aniqlash. Shu asosda raqamli texnologiyalarning imkoniyatlari va afzalliklari o‘rganilib, innovatsion ekotizimning raqamli boshqaruv xizmati xususiyatlari aniqlandi.*

Kalit so‘zlar: *boshqaruv xizmatlari, servis, raqamli iqtisodiyot, raqamli texnologiyalar, innovatsion ekotizim, menejment, intellektual xizmat.*

Kirish. Raqamli texnologiyalarning jadal rivojlanishi nafaqat iqtisodiyotda, balki jamiyatning o‘zida ham tub o‘zgarishlarga olib kelmoqda. Masalan, axborot xarajatlarining qisqarishi tufayli raqamli texnologiyalar davlat, kompaniyalar va jismoniy shaxslar uchun iqtisodiy va ijtimoiy tranzaksiyalar qiymatini sezilarli darajada pasaytiradi, tranzaksiya xarajatlari deyarli nolga aylanadigan innovatsiyalarga yordam beradi, shuningdek, samaradorlikni keskin oshiradi: mavjud faoliyat va xizmatlar arzonlashadi, tezroq yoki qulayroq bo‘ladi. Jumladan, raqamli texnologiyalar integratsiyaga yordam beradi: odamlar ilgari mavjud bo‘lmagan xizmatlardan foydalanish imkoniyatiga ega bo‘lishadi [15]. Shu bilan birga, iste’molchilar, ishlab chiqaruvchilar va vositachilar o‘rtasida axborot mahsulotlarini oldi-sotdi va ayirboshlash sohasida shakllanayotgan ijtimoiy, huquqiy va iqtisodiy munosabatlar puli sifatida tavsiflanadigan axborot bozori shakllantirilmoqda. Ushbu yondashuv bir qator mamlakatlar iqtisodiyotida axborot sanoatining ustunligini kuchaytiradi, ishlab chiqarish va xizmat ko‘rsatish sohasi tobora ilm-fanni talab qiladigan va innovatsion [16] bo‘lib bormoqda. Raqamli iqtisodiyotni rivojlantirish sharoitlari muqarrar ravishda jamiyat hayotining barcha sohalarini o‘zgartirishga olib kelmoqda. Birinchidan, yangi axborot va raqamli texnologiyalarning paydo bo‘lishi tufayli aholining ijtimoiy-maishiy xizmatlardan foydalanishi soddalashtirilmoqda, ikkinchidan, mamlakat rahbariyati va hududlar o‘rtasida tezkor tahlil va axborot almashish imkoniyatlari paydo bo‘lmoqda, uchinchidan, raqobat kuchaymoqda, innovatsiyalarga investitsiyalarni rag‘batlantirish ko‘paymoqda va hokazo. Shu tariqa ishlab chiqarishning raqamli turi va ularni iste’mol qilishning raqamli usuli shakllantirilishini ko‘rishimiz mumkin. Zamonamizning yangi tahdidlari iqtisodiy, ijtimoiy, ekologik tusdagi muammolarni hal etishning yangi usullarini ishlab chiqishni talab

qilgani bois menejment ham chetda qolmaydi. Bugungi kunda u xizmatga aylanmoqda, ammo xizmat oddiy emas, balki intellektual va raqamli xizmatga aylanmoqda. “Ijodkorlik foydasiga standartlashtirishdan, individuallashtirilgan tovar foydasiga ommaviy tovardan, jarayonlarni xilma-xilligi foydasiga unifikatsiyalashdan voz kechish shartlarida xodimlarning vakolatlariga yanada yuqori talablar qo‘yiladi va ularning bilimlari mehnat vositasi sifatida namoyon bo‘ladi” [3]. Intellektual faoliyat, noyob kompetensiyalar, axborot va kommunikatsiyalar raqobatbardoshlik va iqtisodiyotni rivojlantirishning asosiy omillariga aylanmoqda. Shuning uchun, “agar mehnat yanada ijodiy bo‘lsa, mehnat qurollari va vositalari yanada xilma - xil, ya’ni intellektual bo‘lishi kerak” [3].

Mavzu bo‘yicha adabiyotlar sharhi

Shuni alohida ta’kidlash kerakki, boshqaruv o‘zining an’anaviy tushunchasida hech kimga ta’sir sifatida raqamli iqtisodiyot talab qiladigan vazifalarni hal etishga qodir emas. Masalan, innovatsion soha ijodiy shaxslar, g‘oyalar generatorlari, innovatsion ekotizimlar (IES) va noierarxik va noan’anaviy tuzilmalarga ega bo‘lgan infratuzilmalardan iborat bo‘lib, ularga alohida yurish, “yumshoq” ta’sir, ularning faoliyatini muvofiqlashtirish va hokazo zarur. Masalan, V.V. Yermolenkoning ta’kidlashicha, “bir guruh shaxslarning intellektual inson kapitaliga oid bilimlarini jamlash boshqaruv mazmunini tubdan o‘zgartiradi. Boshqaruv faqat servis faoliyati sifatida intellektual inson kapitalini tashuvchilar tomonidan talab qilinadi” [4]. Shu asosda U. Eshbining: “Agar boshqaruv obyektidan xilma-xil xulq-atvor talab qilinsa, uni boshqarish yanada xilma-xil bo‘lishi kerak”, degan so‘zlarini eslash o‘rinlidir [3,4]. Alohida turdagi IES tizimlarining qiyofasi o‘zgarib, ular boshqa tashkiliy platformalarga (tarmoqni ochish, ochiq innovatsiyalar, g‘oyalar oqimining erkin harakati, vaqtinchalik ijodiy guruhlar, innovatsion loyihalar) o‘tmoqda - bularning barchasi innovatsion ekotizimlarning yangi xususiyatlarini keltirib chiqaradi. Shu bois biz zamonaviy trendlar - raqamli boshqaruv intellektual xizmatini hisobga olgan holda yangi sifatli menejmentga o‘tish zarurligi haqida gapiramiz.

V.I. Muxopad va L.N. Ustinova haqli ravishda ta’kidlaydilar: “Raqamli texnologiyalar bilimlarni boshqarishning muhim tarkibiy qismidir, ularni qo‘llash ilmiy-tadqiqot faoliyatining butun tizimini boshqarishga umumsistemaviy yondashuvning bir qismi bo‘lishi muhimdir” [10].

A.R. Mannapov “yangiliklarni uzluksiz yaratish, ularni joriy etish, bozorga chiqarish va keng targ‘ib qilish uchun tizimli tashkil etilgan innovatsion faoliyatni tashkil etish zarurligini ta’kidlaydi, bu esa professional yo‘lga qo‘yilgan innovatsion menejment mavjudligini nazarda tutadi” [9].

I.L. Avdeeva, T.A. Golovina va L.V. Paraxina kabi mualliflarning fikricha, “davlatlar, biznes va fuqarolik jamiyati uchun kelgusi xavf-xatarlar va muammolarga tezkor javob berish va modellashtirish imkonini beruvchi texnologiyalar va ma’lumotlarni boshqarishning yangi modellari raqamli iqtisodiyotda muvaffaqiyatning asosiy omiliga aylanmoqda” [1].

N.Y. Kaufmanning ta’kidlashicha, “raqamli iqtisodiyotni shakllantirish sharoitida bilimlarni samarali boshqarish zarur bo‘lib, bu inson shaxsining bilim tashuvchisi va generatori sifatidagi ijodiy salohiyatini yuksak darajada rivojlantirish bilan tavsiflanadi” [6].

Shunday qilib, iqtisodiyotni innovatsion sohada raqobatbardosh pozitsiyada ushlab turish va zamonaviy tendensiyalarga amal qilish maqsadida boshqaruv moslashuvchan, yakuniy natijaga qaratilgan, aniq ishlab chiquvchiga qaratilishi va zamonaviy raqamli texnologiyalar yutuqlaridan foydalangan holda yumshoq va nozik shaklda uning talablarini qondirishi kerak.

Tadqiqotlar metodologiyasi. Empirik tadqiqotlar, tizimli va qiyosiy tahlil, statistik guruhlash va ekspert baholash usullaridan foydalanildi.

Tahlil va natijalar

Shu asosda ushbu moddaning maqsadi boshqaruv va raqamli texnologiyalarning integratsiyasini hisobga olgan holda iqtisodiyotni raqamlashtirish doirasida innovatsion infratuzilma uchun innovatsion ekotizim xizmatlari sifatida boshqaruvni tahlil qilish hisoblanadi.

Belgilangan maqsadga erishish uchun quyidagi vazifalarni hal etish zarur:

-boshqaruvni xizmat sifatida tavsiflash, uning an'anaviy menejmentdan farqlarini aniqlash va asosiy prinsiplarni belgilash;

-iqtisodiyotni transformatsiya qilish drayverlari bo'lgan raqamli texnologiyalarni tahlil qilish;

-boshqaruv xizmati va raqamli servislar tushunchalarini muvofiqlashtirish, iqtisodiyotni raqamlashtirish sharoitida ularning simbiozining afzalliklarini aniqlash.

Innovatsion ekotizim innovatsiyalar bozorida talab yuqori bo'lgan "intellektual faoliyat natijalarini innovatsion tovarga (yoki) xizmatlarga aylantirishni ta'minlash uchun shart-sharoitlar yaratadi". Qoidaga ko'ra, uning infratuzilmasi tarkibiga 30 ga yaqin turdagi obyektlar kiradi, ularning faoliyati g'oyalar yaratishga, yangiliklarni o'zlashtirishga, innovatsiyalar marketingiga, tijoratlashtirishga va shu kabilarga yo'naltirilgan. "Xolistik yondashuvda innovatsion ekotizim infratuzilmasi quyidagi asosiy xususiyatlarga xos bo'lgan tuzilmaviy tizimdan iborat: sifat omillari miqdoriy omillardan ustunlik qiladi, qabul qilinayotgan qarorlarning muqobillarini baholash mezonlari, qoida tariqasida, subyektiv xususiyatga ega (innovatsiyalar bozori tomonidan ham, innovatsion tizimning o'zida ham)" [5]. Biroq bunday tizimni qanday boshqarish masalasi dolzarb bo'lib qolmoqda? Tizim noierarxik va noan'anaviy bo'lsa, menejmentning qanday usullarini qo'llash kerak? Ma'lumki, boshqaruv o'zining an'anaviy ko'rinishida obyektga yo'naltirilishi, maqsadli o'rnatilishi va xodimlarga ta'sir ko'rsatish shakli (bevosita yoki bilvosita) bilan tavsiflanadi. Bunda hokimiyat, intizom, tartibga solish, mas'uliyat, qandaydir qoidalarni shakllantirish, bajarish muddatlarini belgilash va shu kabilar. Biroq, ushbu turdagi menejmentni innovatsion ekotizimga qo'llash mumkin emas, birinchidan, unda aniq tuzilma yo'qligi sababli, ikkinchidan, infratuzilmaning xilma-xilligi boshqaruvning aniq mezonlarini shakllantirish imkonini bermayapti, uchinchidan, ijod erkinligi boshqaruv obyektining keyingi harakatlarini, to'rtinchidan, tizimning jadalligi va beqarorligini oldindan bilish imkonini bermaydi. Ko'rsatib o'tilgan xususiyatlarni inobatga olgan holda, innovatsion ekotizim infratuzilmasini boshqarish ma'muriy ta'sirlarsiz, "yumshoq" bo'lishi kerakligini ta'kidlash lozim. Bu yerda biz boshqaruvni xizmatga aylantirish haqida gaplashmoqdamiz, chunki iqtisodiyotni rivojlantirishning hozirgi bosqichida "servitizatsiya" jarayonlari tobora ommalashib bormoqda va ko'plab iqtisodiy munosabatlarni, shu jumladan innovatsion munosabatlarni tartibga solishning samarali usuli hisoblanadi"[11].

Demak, xizmat deganda "... har qanday asosiy xizmatni iste'molchi uchun alohida jozibadorlik beradigan shakllar, turlar va tashkilotlar bo'yicha tarqatilgan qo'shimcha xizmatlarni kuzatib borish tizimi"[7]. Ta'kidlash joizki, sifatli xizmat ko'rsatish sherikning hal etilayotgan muammolariga o'z vaqtida va katta e'tibor bilan ko'rsatilishi kerak. Innovatsion ekotizim sharoitida ijodiy, ilmiy va intellektual faoliyat davomida nomoddiy aktivlar ishlab chiqaradigan nodavlat kapital mijoz sifatida namoyon bo'ladi. Boshqaruv obyekti ko'p jihatdan "doimiy", "nomuvofiq" bo'lganligi sababli, boshqaruvning o'zi ham to'g'ridan-to'g'ri, qat'iy va ma'muriy

bo‘lishi mumkin emas. Shuning uchun an’anaviy menejmentdan farqli o‘laroq, xizmatning asosi tezkorlik, ommaboplik, do‘stona munosabat, bilim va professionallik hisoblanadi. O‘z navbatida, boshqaruv xizmati sifatli boshqaruv xizmati ko‘rsatish va ijodiy shaxslarni muvofiqlashtirish, shuningdek, aqliy mehnat xodimlarining o‘zaro tarmoq hamkorligi orqali innovatsion faoliyatni amalga oshirish uchun qulay shart-sharoitlar yaratishdan iborat. Masalan, G.N.Konstantinov yangi menejmentning asosiy vazifasini odamlarni “rivojlantirish uchun makon yaratish va qo‘llab-quvvatlash” deb biladi. Yangi dunyoda bilim oqimini boshqarib, tashkiliy yetuklikni oshirishga intilish kerak. “Bu vazifalarni muvaffaqiyatli hal etish uchun menejment nafaqat professional, savodli, samarali bo‘lishi kerak. Menejment dono bo‘lishi kerak” [8]. Innovatsion ekotizim faoliyati doirasida boshqaruv xizmati intellektual mehnat xodimlari faoliyatini malakali va kasbiy jihatdan muvofiqlashtirish, rejalashtirishning nostandart vazifalarini tahlil qilish, ijodiy faoliyatni, xodimlarning bilimlarini rag‘batlantirishni ta’minlash, ularning intellektual faoliyati samaradorligi va natijadorligi ko‘rsatkichlarini aniqlash kabi vazifalarni hal etishi kerak. Menejmentning servis xususiyati ichki tashkiliy va tashkilotlararo munosabatlarni rivojlantirishga qaratilgan, butunlay tadqiqotchiga, yakuniy natijaga qaratilgan, innovatsion quyi tizim xodimlari tomonidan bajariladigan funksiyalar va bozor tartib-taomillariga e’tibor qaratadi. Shuni ta’kidlash kerakki, “eng muhimi inson ongi bo‘lgan noaniq tizimlarni boshqarish o‘zini o‘zi tashkil etishga tayanmasdan, ya’ni tizim ichida rivojlanish manbaini topmasdan mumkin emas” [13]. Shunday qilib, boshqaruv xizmatining asosiy belgilari orasida quyidagilarni aniqlash mumkin: obyektga bevosita ta’sir ko‘rsatish; vaqtni uzaytirish; xushmuomalalik; obyekt bilan batafsil hamkorlik qilish; vositalarning xilma-xilligi, ommaviy ongga ta’sir ko‘rsatish imkoniyati; xodimlarning alohida fazilatlarini rivojlantirish hamda yashirin qobiliyat va iste’dodlarini aniqlash; aqliy mehnat uchun qulay muhit yaratish.

Shuni ta’kidlamoqchimanki, boshqaruv metodologiyasi qat’iy usullardan o‘tmishga borib taqaladi. Yumshoq boshqaruv usullariga o‘tish ilmiy metodologiyaning o‘zgarishi sharoitida sodir bo‘ladi, bunda sinergetika tobora og‘irlashib bormoqda [13]. Xizmatning barcha belgilariga ega bunday boshqaruv intellektual, raqamli iqtisodiyot sharoitida esa raqamli texnologiyalar bilan to‘ldirilib, pirovardida uning sifatini oshiradi.

Raqamli transformatsiyaning asosiy sababi raqamli insonning o‘z vaqtida, ommaboplik, sifat va shaxsiylashtirishga intilishi bilan belgilanadi, bunda raqamli paradigma uchun “hamma narsa xizmat sifatida, bundan tashqari ma’lumotlarga va axborot resurslaridan birgalikda foydalanishga yo‘naltirilgan xizmat” tamoyili asosiy hisoblanadi [2]. Raqamli iqtisodiyotning jadal rivojlanishi ushbu xizmat ishlab chiqarish jarayonining to‘laqonli elementiga aylanishiga xizmat qilmoqda.

Uning asosiy afzalligi iste’molchiga ijobiy ta’sir ko‘rsatadigan faoliyat uchun shart-sharoitlarni ta’minlashdan iborat. Shu bois raqamli xizmatlar va aqlli makonlarni rivojlantirishga zamonaviy yondashuv inson turmush sharoitini yanada qulaylashtiradi. “Aqlli makon odamlar va texnologik tizimlar bog‘liq va muvofiqlashtirilgan intellektual ekotizimlarda ochiq o‘zaro hamkorlik qiladigan raqamli muhitdir” [14]. Ta’kidlash joizki, innovatsion infratuzilma uchun bu muhim jihatdir, chunki barcha obyektlar o‘rtasida aniq kooperatsiya va tezkor axborot almashinuvisiz innovatsiyalarni yaratish jarayoni tegishli darajada, ma’lumotlarni kechiktirmasdan va buzib ko‘rsatmasdan amalga oshirilishi mumkin emas. Biroq, innovatsion ekotizim faoliyatiga raqamli xizmatning mohiyatini tushunish va joriy etish yetarli emas, chunki barcha biznes-modellarni to‘liq o‘zgartirish, boshqaruv, qadriyatlarni qayta baholash, shuningdek

xodimlarning yangi ko‘nikma va vakolatlarini rivojlantirish, kundalik hayotda yangi raqamli texnologiyalardan foydalanishga tayyorligini tushunish zarur. Chunki yaqin kelajakda raqamli texnologiyalardan samarali foydalanish yuqori texnologiyali mahsulotlar va xizmatlarni yaratishga ko‘maklashadigan raqamlashtirish uchun infratuzilma va huquqiy muhitni shakllantiruvchi barcha faoliyat subyektlarining xalqaro raqobatbardoshligini belgilaydi [14].

Shunday qilib, raqamli texnologiyalar deganda elektron shakldagi ma’lumotlarga ega bo‘lgan texnologiyalar tushuniladi, ular “iqtisodiyotning barcha sektorlarida talab qilinadigan, yangi bozorlarni yaratadigan va biznes jarayonlarini o‘zgartiradigan dasturiy va apparat vositalari va tizimlariga asoslangan” [14]. Ular jamiyatni tubdan o‘zgartirishga xizmat qiladi, innovatsion sohada ilm-fan, texnologiyalar va innovatsiyalar sohasida samarali kommunikatsiya tizimini yaratish, axborotni qayta ishlash va boshqaruv qarorlarini qabul qilish jarayonlarini jadallashtirish, ilm-fanni talab qiladigan biznesni rivojlantirish uchun barcha zarur sharoitlarni yaratish orqali iqtisodiyot va fuqarolarning innovatsiyalarga moyilligini oshirishni ta’minlash imkonini beradi. Bugungi kunda to‘qqizta raqamli texnologiya ajratilgan bo‘lsa-da, ularning aksariyati bir nechta subtexnologiyalarga bo‘linadi. Biz o‘nta raqamli texnologiya va bitta subtexnologiyani tahlil qildik [12,14] va ularni iqtisodiyot va innovatsion ekotizimga joriy etishning afzalliklarini aniqladik (1-jadval).

Ta’kidlash joizki, raqamli texnologiyalar tufayli muayyan xizmatlar ko‘rsatish ancha soddalashtirilmoqda. Masalan, innovatsion sohada blokcheyn texnologiyasi juda foydali bo‘lib, u axborotni ishonchli qayd etish va uning xavfsizligini ta’minlashga, yagona ma’lumotlar bazasi esa tadqiqotlarni izlash, monitoring qilish va tizimlashtirish, ishlanmalarni taqqoslash tezkorligini ta’minlashga qodir. Simsiz aloqa texnologiyalari vaziyatni uzoq masofadan tahlil qilish, tezkor axborot almashish, onlayn konferensiyalar, innovatsion loyihalar ko‘rgazmalari va shu kabilarni tashkil etish imkonini beradi.

Shunday qilib, raqamli xizmat innovatsion ekotizim uchun muhim sifatlarga ega: foydalanish imkoniyati, mijozga yo‘naltirish, harakatchanlik va tezlik, foydalanish imkoniyati va qulayligi, chunki innovatsion soha o‘z faoliyatini tashkil etishga alohida talabchan va sezgir. Xizmat ko‘rsatish sohasining o‘sishi boshqaruvning an’anaviy g‘oyalarini o‘zgartirmoqda, chunki u ham o‘zgarishga va yangi usullarni jalb qilishga majbur. Innovatsion ekotizim uchun bu ayniqsa muhim, chunki g‘oyalarni ishlab chiquvchilar aniq ko‘rsatmalar, vaqtinchalik cheklovlar, byurokratik sharoitlar yoki qat’iy ketma-ketlikda tadqiqotlar bilan shug‘ullana olmaydi. Ularga infratuzilma tomonidan to‘siqsiz hamkorlik qilish, tajriba almashish, ijodkorlik uchun qulay innovatsion muhit yaratish, har bir ishlab chiquvchining talablarini qondirish, faoliyatni muvofiqlashtirish, resurslar bilan ta’minlash va shu kabilar uchun yaxshi va sifatli xizmat ko‘rsatish zarur. Bu yerda biz boshqaruvning xizmat sifatida faoliyat ko‘rsatishi, buning uchun barcha zarur sharoitlarni yaratib berishi, ob’ektlardan talab qilinadigan xulq-atvorni bajarishni ta’minlamasligi haqida gapiramiz. Biroq, raqamlashtirish va raqamli xizmatlarni rivojlantirish tufayli boshqaruv xizmatlarining funksionalligi va imkoniyatlari sezilarli darajada oshib bormoqda. Masalan, ishlab chiquvchilar jahon bilim ma’lumotlari bazasidan foydalanish imkoniyatiga ega bo‘lib, ilg‘or ilmiy-texnologik jarayonlarga qo‘shiladi, turli mamlakatlardagi hamkasblari, xalqaro sheriklar bilan muloqot qilish imkoniyatiga ega bo‘ladi, shuningdek, raqamli texnologiyalarni qo‘llash rivojlanishning istiqbolli yo‘nalishlarini aniqlash, investitsiya loyihalari asoslarini shakllantirish, bozor xatti-harakatlarini prognozlash, ishlanmalarni tizimlashtirish va intellektual mulk obyektlarini ishonchli himoya qilish imkonini beradi.

Xulosa va tavsiyalar

Xulosa qilib aytganda, raqamli texnologiyalarni rivojlantirish biznesga, iqtisodiyotga an'anaviy yondashuvlarni o'zgartiradi, boshqaruv tizimiga, mijozlarga xizmat ko'rsatishga va hokazolarga bevosita ta'sir ko'rsatadi. Innovatsion ekotizimda ham xuddi shunday bo'ladi. Agar innovatsiyalarni yaratish ilg'or texnologiyalar yordamida amalga oshirilayotgan bo'lsa, bu jarayonlarni boshqarish ham zamonaviy va texnologik bo'lishi kerak. Shu asosda quyidagi xulosalarni chiqarish mumkin:

- ta'sir qiluvchi omil sifatida shakllangan an'anaviy menejmentdan farqli o'laroq, boshqaruv xizmat sifatida butunlay boshqacha xususiyatga ega - harakat qilishga undash emas, balki unga faol ko'maklashish;

- raqamli texnologiyalar tufayli o'zaro hamkorlik qilish, ma'lumotlarni ishlab chiqarish, saqlash, qayta ishlash va uzatish, onlayn xizmatlar ko'rsatish va shu kabilar uchun yangi imkoniyatlar paydo bo'lmoqda. Bunda innovatsion ekotizim nafaqat tadqiqotlar o'tkazish, balki ularni qayd etish sohasida ham katta ustunliklarga ega bo'ladi;

- raqamli texnologiyalar asosida boshqaruv xizmati va raqamli servis simbiozi innovatsiyalar yaratish, ularni tijoratlashtirish, patent tadqiqotlarini o'tkazish, hisobot va tahliliy faoliyat jarayonlarini optimallashtirish imkonini beradi.

VIRTUAL TEXNOLOGIYALAR VA INSON PSIXIKASIGA IJTIMOIY-PSIXOLOGIK TA'SIRI

Boboqulov Sherzod Sherqulovich
Samarqand Davlat Chet Tillar Instituti Narpay Xorijiy Tillar Fakulteti o'qituvchisi
https://doi.org/10.5281/zenodo.14754376

Kirish

Virtual texnologiyalar zamonaviy hayotning ajralmas qismiga aylanib, turli sohalarda ulkan o'zgarishlarni keltirib chiqarmoqda. Ushbu texnologiyalar shaxslar o'rtasidagi muloqotdan tortib, ta'lim va sog'liqni saqlash tizimigacha bo'lgan jarayonlarga jiddiy ta'sir ko'rsatmoqda. Bugungi kunda insonlar virtual muhit orqali masofaviy ishlash, bilim olish va turli ijtimoiy faoliyatlarda qatnashish imkoniyatiga ega bo'lmoqda. Shu bilan birga, virtual texnologiyalarning inson psixikasiga ta'sirini o'rganish dolzarb masala sifatida e'tirof etilmoqda.

Ushbu maqola virtual texnologiyalarning inson psixikasiga bo'lgan ijtimoiy-psixologik ta'sirini chuqur tahlil qilishga qaratilgan. Tadqiqotning asosiy maqsadi virtual muhitning ijobiy va salbiy ta'sirlarini o'rganish, shuningdek, ushbu texnologiyalarni oqilona va samarali qo'llash bo'yicha tavsiyalar ishlab chiqishdir. Ushbu tadqiqot bugungi kunda texnologiyalarning ta'sir doirasi tobora kengayib borayotgan bir sharoitda o'z dolzarbligini saqlab qolmoqda.

Nazariy ma'lumotlar

Virtual texnologiyalarning inson psixologiyasiga ta'sirini tushunish uchun avvalo ularning asosiy jihatlarini ko'rib chiqish lozim. Virtual texnologiyalar keng doiradagi platformalarni, jumladan, virtual haqiqat (VR), kengaytirilgan haqiqat (AR), onlayn tarmoqlar va sun'iy intellekt tizimlarini qamrab oladi. Ushbu texnologiyalar insonlarning fikrlash, hissiyotlar va xatti-harakatlariga turlicha ta'sir ko'rsatadi.

Virtual texnologiyalar shaxslararo muloqotni yangi bosqichga olib chiqdi. Masalan, onlayn aloqa vositalari orqali insonlar masofaviy tarzda bir-birlari bilan bog'lanish imkoniyatiga ega bo'ldi. Bu, bir tomondan, muloqotning qulayligi va tezkorligini ta'minlasa, boshqa tomondan, yuzma-yuz muloqotning kamayishi sababli ijtimoiy izolyatsiyani kuchaytirishi mumkin. Ba'zi tadqiqotlar virtual texnologiyalarning hissiy salomatlikka ta'sirini o'rganib, ular orqali stress darajasini kamaytirish va depressiyadan chiqishda yordam beruvchi dasturlarni ishlab chiqishga yo'naltirilgan [1, 45].

Virtual muhitning ijobiy ta'sirlaridan biri shundaki, u insonlarning yangi bilimlarni tezroq va samaraliroq o'zlashtirishlariga yordam beradi. Misol uchun, ta'lim sohasida virtual laboratoriyalar va o'quv platformalari yordamida talabalar amaliy mashg'ulotlarni masofadan turib amalga oshirish imkoniyatiga ega bo'lmoqda [2, 78]. Shu bilan birga, virtual texnologiyalarning haddan tashqari ko'p qo'llanilishi inson psixologiyasiga salbiy ta'sir ko'rsatishi, jumladan, e'tibor va diqqatni jamlash qobiliyatini pasaytirishi mumkin [1, 46].

Adabiyotlar tahlili

Virtual texnologiyalarning ijtimoiy-psixologik ta'siri masalasi ko'plab olimlar tomonidan o'rganilgan. Jumladan, Xudoyberganov (2022) o'z tadqiqotida virtual haqiqatning inson hissiyotlariga bo'lgan ta'sirini o'rganib, undan ta'lim va terapiya sohalarida foydalanishning afzalliklarini yoritib berdi [1, 34–38]. Ismoilova (2021) esa virtual texnologiyalarning stressni kamaytiruvchi vosita sifatidagi imkoniyatlarini batafsil tahlil qildi [2, 54–58]. Ushbu adabiyotlar

asosida virtual texnologiyalarning ijtimoiy va psixologik ta’sirini baholashga doir muhim nazariy asoslar shakllantirildi. Shuningdek, ushbu izlanishlar texnologiyalarning salbiy oqibatlarini minimallashtirish bo‘yicha qimmatli tavsiyalarni taqdim etdi.

Tadqiqot metodi

Tadqiqotda quyidagi metodlardan foydalanildi:

1. **Nazariy tahlil**: Virtual texnologiyalar va inson psixikasiga oid ilmiy maqolalar va kitoblar o‘rganildi.
2. **So‘rovnoma**: Virtual muhitdan faol foydalanayotgan respondentlar o‘rtasida psixologik ta’sirini aniqlash maqsadida so‘rovnoma o‘tkazildi.
3. **Eksperiment**: Virtual muhitda uzoq vaqt davomida ishlash inson psixologiyasiga qanday o‘zgarishlar keltirib chiqarishini o‘rganish uchun eksperimental tadqiqot o‘tkazildi.

Natijalar

Tadqiqot natijalari shuni ko‘rsatdiki, virtual texnologiyalar inson psixologiyasiga turli xil ta’sir ko‘rsatadi. Respondentlarning aksariyati virtual muhitdan foydalanish natijasida stress darajasining kamayganini ta’kidladi. Shu bilan birga, so‘rov ishtirokchilarining 30 foizi virtual texnologiyalardan haddan tashqari foydalanish ruhiy charchoq va ijtimoiy izolyatsiyani keltirib chiqarganini qayd etdi.

Eksperiment natijalari shuni ko‘rsatdiki, virtual muhitda uzoq vaqt ishlash diqqatni jamlash qobiliyatini pasaytirishi va hissiy barqarorlikni buzishi mumkin. Biroq, maqsadli va me’yorida foydalanilganda, virtual texnologiyalar inson salomatligini yaxshilash va psixologik barqarorlikni ta’minlashda ijobiy natijalar beradi. Ushbu natijalar virtual muhitning inson psixologiyasiga ta’sirini baholashda muhim manba bo‘lib xizmat qiladi.

Umumiy tahlil

Virtual texnologiyalarning inson psixologiyasiga ijtimoiy-psixologik ta’siri murakkab va ko‘p qirrali masala hisoblanadi. Ushbu texnologiyalar, bir tomondan, insonlarning kundalik hayotini yengillashtirib, ularga yangi imkoniyatlar yaratib beradi. Masalan, masofaviy ta’lim platformalari orqali talabalar yangi bilimlarni o‘zlashtirishi, tibbiyot sohasida esa murakkab jarrohlik amaliyotlarini mashq qilish imkoniyatlari yaratilmoqda. Shu bilan birga, virtual muhitga haddan tashqari qaramlik insonlar o‘rtasidagi real muloqotning kamayishi va ijtimoiy aloqalarning zaiflashishiga olib kelishi mumkin.

Psixologik nuqtai nazardan qaraganda, virtual texnologiyalardan oqilona foydalanish psixik salomatlikni yaxshilashda muhim ahamiyatga ega. Buning uchun, birinchi navbatda, texnologiyalarning inson hayotiga bo‘lgan salbiy ta’sirlarini minimallashtirish choralarini ko‘rish lozim. Masalan, virtual muhitda ishlash vaqtini cheklash, texnologiyalarni maqsadli va samarali foydalanish uchun treninglar tashkil qilish zarur. Bundan tashqari, virtual texnologiyalardan foydalanish madaniyatini shakllantirish va ular orqali ijtimoiy muloqotni rivojlantirish muhimdir.

Kelgusida ushbu masalaga oid tadqiqotlarni davom ettirish, xususan, virtual muhitning hissiy salomatlikka uzoq muddatli ta’sirini o‘rganish dolzarb hisoblanadi. Shuningdek, ushbu texnologiyalar yordamida stressni kamaytirish va psixologik barqarorlikni mustahkamlash usullarini yanada takomillashtirish talab etiladi. Bu jarayonda davlat va xususiy sektorning hamkorligi, ta’lim muassasalarining faol ishtiroki muhim o‘rin tutadi. Virtual texnologiyalar jamiyat hayotida yangi istiqbollar ochib, ularning ta’sir doirasi tobora kengayib borayotgani sababli, bu mavzu yuzasidan tadqiqotlarni muntazam davom ettirish lozim.

Xulosa

Virtual texnologiyalar zamonaviy hayotning ajralmas qismiga aylangan bo‘lib, ularning inson psixikasiga bo‘lgan ta’siri ko‘plab omillarga bog‘liq. Ushbu maqolada virtual texnologiyalarning ijobiy va salbiy ta’sirlari nazariy va amaliy jihatdan chuqur tahlil qilindi. Tadqiqot natijalari shuni ko‘rsatdiki, virtual texnologiyalar oqilona foydalanilganda stressni kamaytirish, hissiy barqarorlikni oshirish va ijtimoiy aloqalarni mustahkamlashda muhim vosita bo‘lishi mumkin. Biroq, ulardan me’yordan ortiq foydalanish salbiy oqibatlarga olib kelishi ehtimoli mavjud.

Virtual texnologiyalarning inson psixologiyasiga ta’sirini yanada chuqurroq o‘rganish, shuningdek, ularning salbiy oqibatlarini minimallashtirish bo‘yicha yangi strategiyalar ishlab chiqish zarur. Shu bilan birga, ushbu texnologiyalarni ijtimoiy-psixologik jihatdan samarali qo‘llash bo‘yicha amaliy tavsiyalarni ishlab chiqish dolzarb vazifa bo‘lib qoladi. Ushbu texnologiyalar jamiyat hayotining barcha sohalariga ta’sir o‘tkazayotganini hisobga olgan holda, ularni inson salomatligi va farovonligi uchun samarali yo‘naltirish muhimdir. Ushbu maqsadga erishish uchun davlat siyosati, xalqaro tajriba va ilmiy-tadqiqot natijalariga asoslanish talab etiladi.

Biznes va turizmni rivojlantirish bo‘limi menejeri, Toshkentdagi Singapur Menejmentni Rivojlantirish Instituti

https://doi.org/10.5281/zenodo.14736087

Innovations in advanced data transmission pathways, security protocols, physiological understanding, and software enhancements are always underway. Various processes and conceptual frameworks are required to protect information based on the methods of data transmission. As high-speed Internet access technologies evolve, essential business elements are transitioning to online platforms. Bank-client systems, corporate websites, e-commerce platforms, news outlets, entertainment services, trading platforms, blogs, and government portals are fundamental to the internet. Web applications are susceptible to attacks because of their accessibility, hence increasing the need for web application security solutions. Security necessitates data protection, since certain assets are tangible and possess monetary value, while others are intangible but nevertheless significant. Safeguarding tangible assets, such as the company's property register, user, customer, and employee information, as well as electronic currency, is vital. Nonetheless, intangible assets such as a company's image must be safeguarded. The protection of personal data is the foremost challenge and responsibility in information security globally and inside a business. Given that the majority of persons engage in online purchasing, e-commerce presents a unique challenge regarding the privacy of personal data on the internet. When executing these acts, meticulously assess the location from where the things are procured for legal conformity. Job search websites and portals providing customised services to the public may potentially jeopardise personal data. This program aims to determine the most effective methods for safeguarding Internet-exposed personal information. This article discusses personal data protection, breaches, and unauthorised third-party use resulting from their actions. Theft, distortion, manipulation, media deletion, and unauthorised access are examples. First, delineate the purpose of personal data prior to its protection. These measures limit businesses’ unauthorised use and processing of personal data and mitigate the risk of breaches. This statute characterises personal data as any identifiable information pertaining to corporate clients and employees. Name, identification number, IP address, etc. This study examines general and sensitive personal data. Personal data such as employment, income, education, phone number, and identification number may identify an individual. The protection of personal data entails the establishment of local laws for managing personal data and the implementation of organisational and technical means to safeguard it. An automated solution cannot comprehensively delineate the personal data protection protocol inside an e-commerce firm, considering its specific context. Establishing personal data security protocols requires considerable time and effort. A competent institutional employee or third-party expert is required, resulting in additional expenses. Enhanced copying and dissemination technologies need the protection of personal data. Information technology has advanced to a point where the self-protection of information rights is no longer feasible in the face of privacy intrusions. Contemporary folks can no longer evade the extensive array of technological devices that collect and evaluate data on them. This research examines the selection of organisational and technical strategies for personal data processing. They inhibit illegal access,

deletion, modification, obstruction, and replication of personal data. The objective of these measures is to avert personal data breaches and related offences. This document examines the intricacies of information system software development and the safeguarding of personal data. This research aims to assess techniques for preventing Internet fraud. This work addresses contemporary cyberbullying prevention strategies, including antivirus software capable of identifying and categorising dubious messages as spam. The research investigates the economic challenges confronting people and businesses as a result of cybercrime. The primary emphasis will be a retrospective assessment of current situations. The paper analysed the criteria and measures required to safeguard the data of e-commerce web services. The website security system, a component of the web service, was examined independently. The most vulnerable and attractive targets for hackers, as well as areas of most concern, are under investigation. Instances of vulnerabilities, their consequences, attack pathways, and defensive strategies are presented (Laptiev et al., 2021). The primary types of assaults are analysed, with particular focus on resource-compromising attacks. A comprehensive analysis of the most pragmatic cybersecurity solutions and concepts for an integrated approach in software development is presented. This paper advocates for the use of technical and organisational protective measures. This document monitors software development and ongoing projects. Fabiano (2019) advocates for a source code security audit to scrutinise each line of code for vulnerabilities. A penetration test is sometimes referenced to identify flaws related to business logic, access differentiation, authentication, and session management. The auditor must circumvent all application security protocols to access sensitive data. The development dynamics of contemporary Internet projects, together with frequent modifications such as new functionalities, code revisions, and infrastructure enhancements, generate untested areas that may be susceptible to vulnerabilities. Consequently, the research advocates for yearly assessments and log surveillance of security incidents. Additionally, it incorporates Web Application Firewalls (WAFs) and vulnerability scanners as components of a comprehensive plan to defend against various attacks. Supplementary tools are evaluated. If security protections are testable and the actual IP address is disclosed, the tool is deemed untrustworthy (Deng, 2019). The initiative also gathers information on software testing service enhancements, dangerous configurations, open ports, and exposed vulnerabilities that might jeopardise user data. In conclusion, the study aims to identify the optimal personal data protection strategy for online trading processes. Project Significance: Despite the pandemic's disruption and unpredictability, individuals recognised that they were expected, and at times mandated, to provide personal information to combat COVID-19. Transitioning the majority of essential processes to the Internet in standard mode may take over a year. Extensive advancements that have transformed communication and engagement in the digital realm have created challenges in privacy protection for businesses aiming to adhere to legal standards and mitigate the crisis while safeguarding individual rights. Consumers and the public are increasingly apprehensive about the use of personal data. Data privacy is emerging as a significant issue for the majority of companies. In 2020, over fifty percent of data professionals from large and medium-sized multinational firms said their organisations needed to implement more data security measures (Clifford et al., 2018). The remote relocation of many employees and illicit activation may need additional safeguards. The pandemic has heightened the significance of privacy and the benefits of enhanced security for enterprises. Senior management and boards get data protection guidance. The company leader decides on privacy enhancements, making their participation essential. Senior management must

prioritise secrecy, since it is a fundamental principle of business. Numerous organisations use their data protection specialists to resolve these problems (Kodapanakkal et al., 2020). Consumers are increasingly apprehensive about data security in technologies used for remote purchases, communication with e-commerce platforms, and payment connections. The drastic workflow alterations and other repercussions of COVID-19 have compromised the integrity of IT infrastructure protection. Inefficient remote access to e-commerce platforms, VPN vulnerabilities, and insufficient personnel to address these issues jeopardise firm data. Consequently, the formulation of innovative personal data security protocols and the routine assessment of outdated technologies are essential. This study and effort in this domain are vital due to the emergence of advanced phishing tactics designed to obfuscate users and complicate the detection of attacks. The Emotet bot employs email interception as a very innovative mass phishing technique (Kuner et al., 2018). The bot utilises data from compromised e-sales services to dispatch fraudulent emails. This data is used in communication, making it persuasive and prompting victims to download malware files. Targeting high-level executives with whaling poses far greater risks. Cybercriminals may use personal information obtained or stolen online to dispatch persuasive fraudulent communications to company email accounts (Kodapanakkal et al., 2020). Simultaneously, hackers use trendy topics to entice victims into opening malicious emails. This may include COVID vaccination data, financial advisories, or political instability. The attitudes of leaders on personal and commercial data security are essential. Study Questions: The primary objective of the study is to address the enquiries, "What are the most common types of credit card fraud, and what are the most effective protective measures against it?" What are the approaches for risk reduction? Do the components of diamond fraud theory apply to internet fraud? » The effect of credit card fraud on companies will also be shown. The impact will be assessed using three methods. The financial losses, the most apparent consequence of fraud on a corporation, will be measured. Secondly, it will be shown how fraud diminishes a company's standing among investors and partners. The paper will also examine "How does credit card fraud distort data?" The inquiry will concentrate on the security of online purchases. Comprehending the mechanisms of credit card theft is essential for combating it. The study will address the question, "What are the causes of contemporary card fraud, the mechanisms involved, and the vulnerabilities in the protection systems that facilitate it?" The two most common forms of card account theft will be explored. The first method excludes cardholders when card data is extracted en masse from banks, online retailers, and online service providers. Typically, organised criminals or cybercriminals are involved. Funds are disbursed when card information is sold on online criminal platforms. The cardholder-assisted fraud methodology will be examined next. Individual fraudsters sometimes use sophisticated social engineering techniques to manipulate human behaviour. They perpetrate theft with techniques that exploit human weak spots. This analysis will explore the mechanisms of prevalent plastic card thefts and the most effective prevention strategies. The analysis will include skimming, shimming, re-debiting from the card, data interception, and data theft facilitated by Trojans and viruses. The subsequent study subject is "What are the solutions for the organisation of intellectual property, particularly software?" Their organisation will focus on the impact of protecting software on cyberattacks and card forgeries that result in payment theft. The evolution and enhancement of fraud techniques will be explored. Historically, skimmers were only located on ATMs, or little cameras were positioned nearby to capture the PIN digits of plastic bank cards. Currently, keyboard pads are the most prevalent, with an integrated keyboard and a top panel that resembles it while allowing for PIN

code entry. The paper must address the future of prominent cyber fraud trends and their impact on the global economy and industry. Conceptual Framework: Any data related, either directly or indirectly, to a legal entity is classified as personal data. Customer data includes identification number, exact address, mobile phone number, and email address, as stated by Yartey et al. (2021). The processing of information systems generates new risks that must be mitigated or eradicated. Threats to information are internal or external factors affecting an automated processing system that might jeopardise data subjects. Morse et al. provide a contextual enumeration of scenarios in which information systems are vulnerable (2020). It transpires when the company's software is antiquated, defective, and susceptible. The likelihood of threats increases if certain system functions, particularly defensive measures, are ineffective or if information operation and storage are challenging. The implementation of specific protective strategies in this research is contingent upon various security levels, as noted by Hou et al. (2019). The criteria delineate protective levels for each category of danger: maximum, high, medium, and low. The characteristics of Wagner affect its selection (Wagner, 2018). The quantity of subjects whose data is processed, together with the classification and value of the processed data, is prioritised. Sun et al. additionally include types of processing and the significance of threats (Sun et al., 2018). Evaluating these attributes facilitates the development of a system capable of addressing data security threats at all anticipated levels. Besides technology, the protective system integrates many methods. Regulatory mandates require businesses to safeguard personal data. Technical and organisational measures are implemented. This paper will delineate cyber fraud as the leakage, loss, distortion, and destruction of customer personal data (Whitty, 2019). Adherence to personal data protection standards necessitates the development, implementation, and maintenance of advanced software systems that execute the following functions (Ivanov et al., 2018): This obstructs both external and internal attackers from gaining access to data. Firewalls, access control systems, encryption, and blocking are used for this purpose. The company autonomously determines all necessary methods to safeguard personal data from breaches, necessitating simply their competencies and certifications, rather than specific software names or types. Pérez-González et al. (2019) assert that the development of a data security system should be executed incrementally. Every project management method implements new tasks incrementally. These include development, testing, implementation, analysis, and modification to rectify deficiencies. The head of the organisation should supervise this array of duties. In this case, a personal data security system will function without modifications. Globalisation, the swift advancement of financial markets and the instruments traded therein, along with the intricacy of economic entities and their business operations, foster conditions conducive to the biased representation of public information, including corporate financial statements. The combination of these factors and the ethical transformation of the modern "homo economicus" engenders novel corporate deceit. They progressively do not align with Cressy's differential association theory, or FTT (Zadereyko et al., 2019). The three-factor FTT model was subsequently augmented to include "abilities." A superior model, The Diamond Fraud Theory (FDT), emerged almost fifty years later. The fraudster needs the capability to more effectively navigate FTT situations. It is necessary to justify and conceal unethical actions concerning the falsification of the company's public information. Project Limitations: The effort is constrained by its incapacity to collect credible cyber fraud statistics, since it can only rely on data breaches reported by regulators. Merely 10–12% of cybercrimes are documented (Ali et al., 2018). Individuals and organisations that have experienced online extortion

are apprehensive about seeking professional help due to the risks associated with disclosing compromised information. Perpetrators continually devise novel methods to illicitly acquire sensitive data, which cannot be overlooked. More than 20 types of software exist that incapacitate networked devices (Harvey, 2018). Hackers continually enhance their techniques and have long used artificial intelligence, complicating threat detection systems. Fraudsters also devise novel techniques for extracting payment information. Client profiles of online shops include identification, address, telephone number, and banking card details. Trends in data security often evolve and cannot be fully comprehended. Artificial intelligence represents a new frontier in the prevention of cyber fraud. AI-driven solutions will gain prominence as businesses transition from data centres to cloud environments. Online retailers may use enhanced security configurations due to ongoing advancements in surveillance and safeguarding. The Data Leak Prevention system is used to detect and avert the unauthorised dissemination of purchasers' private information via both internal and external channels in real time. Users' end devices may also be managed using it. This study is also constrained by the inability to foresee all security failures and internal vulnerabilities. This study only impacts significant trading organisations equipped with comprehensive risk monitoring systems and a wide array of threats. Limited research has gathered and assessed external impact threats for small and medium-sized e-commerce firms. Human error, a significant contributor to data breaches, is another limitation. Employee neglect and noncompliance with essential security protocols may undermine even the most reliable information security measures. Most intentional actions are driven by financial incentives. In large businesses, certain employees may engage in misconduct if they see an opportunity. Regrettably, individuals in the material-valued department are at risk. Both business data (including customer bases, supplier bases, and marketing tactics) and consumer personal data are significant. Certain employees see corporate data as personal, which contributes to its release; departing individuals often believe they may maintain access to it. The diamond fraud theory posits that Internet fraudsters may be driven by data rather than financial gain. An SSL certificate on the website is perhaps the most effective method to protect credit card information. The SSL certificate safeguards client data in online shops, including names, addresses, phone numbers, and bank card information (Wang et al., 2020). Consequently, hackers are unable to access this information and use it to misappropriate funds from a client's card. Furthermore, each edition of the program is presumably more reliable. Developers revise software with each iteration, rectifying vulnerabilities exploited by hackers. Non-updatable plugins, extensions, and applications expose e-commerce sites on independent platforms to hacker vulnerabilities. Regularly updating website and server software with the latest minor security versions may be the most effective and straightforward method to avert an attack. Consequently, obtaining the latest browser update and updating the computer's operating system should prevent data breaches associated with device malfunctions. Mitigating hacking risks involves the constant monitoring of service security warnings and the implementation of security patches. The optimal technique for securing data transmission is expected to align the site with global e-commerce standards. Consistent security scans, reliable backups, and reputable hosting will suffice. Any business that accepts credit or debit cards, whether online or offline, is required to adhere to the guidelines set by the PCI Security Guidelines Council (Wilson et al., 2018). These standards protect corporate financial information. Violations of regulations increase the danger of customer data breaches. Selecting the appropriate hosting provider may protect an e-commerce company. Dedicated servers, due to their enhanced security, are likely to perform optimally. Virtual

services and hosting are the least effective because of their standardised plans, which lack customisation for individual shops. Hosting providers must conduct frequent backups, maintain comprehensive records, and oversee network activities. The warning system for account irregularities and site infections is essential. Technical help should notify of the infringement and provide instructions along with a link to the knowledge base for resolution. The use of plugins and firewall software may also influence the situation. Firewalls also obstruct internet threats such as cross-site scripting and SQL injection (Latchoumi et al., 2020). Implementing two-factor authentication upon login will enhance security. All individuals are required to provide supplementary information that is exclusively known to them. This effectively protects the online store's website against credit card data leaks.DefinitionsAccess control systems organise and limit data access using software and hardware (Hirsch, 2018).Taylor (2020) defines antivirus software as a program that prevents, detects, and eliminates computer infections.According to Becerril (2018), specialised software may stop the transfer of secret information and monitor employee work to identify security vulnerabilities and avoid breaches.During a certain expiry date, a card user has the legal right to use a plastic card for financial transactions (Zadereyko et al., 2019).Maintaining confidentiality is crucial to avoid unauthorised access by other parties (Wang et al., 2019).Fraudulent credit card usage may lead to illicit withdrawal of cash and misuse of personal data (Bertrand et al., 2020).According to Mariani et al. (2021), cryptographic protection involves data change via encryption and/or extension creation.The card may include bank account information such as the owner's name, number, expiry date, and security code (Laptiev et al., 2021).The Diamond fraud hypothesis outlines four factors that fraudsters need to commit theft: opportunity, motive, ability, and justification. 2019 (Zadereyko et al.).Fabiano (2019) defines e-commerce as the distribution, advertising, marketing, and selling of products or services online.An external invader is someone outside the information system during threat implementation (Deng, 2019).A firewall is a computer software that protects against viruses and hacker assaults (Clifford et al., 2018).Internet fraud known as fishing involves obtaining user identity data (Kodapanakkal et al., 2020).Kuner et al. (2018) define identity theft as the fraudulent exploitation of personal data to steal money or get advantages.Yartey et al. (2021) define information security vulnerabilities as deficiencies in an asset or control and management system that attackers may exploit.Information storage involves storing source data to provide timely data supply upon user request (Morse et al., 2020).An insider is an invader in the information system during a threat implementation (Hou et al., 2019).Information leakage over a technical channel refers to the uncontrolled transfer of protected information from a carrier to a technological interceptor (Wagner, 2018).Sun et al. (2018) define level of protection as the effect of technological and organisational measures on information safety and security.According to Whitty (2019), personal data refers to any information that may identify an individual.According to Ivanov et al. (2018), re-debiting involves withdrawing money from a bank card twice for the same transaction.Shimming is an advanced kind of skimming that involves reading a bank customer's card information at an ATM using a thin device (Pérez-González et al., 2019).Skimming is a sort of bank card fraud that involves skimming information from the magnetic stripe using a tech device or skimmer (Ali et al., 2018).According to Wang et al. (2020), a Trojan is a harmful software used by attackers to steal information, damage computers, disrupt performance, or misuse resources.Wilson et al. (2018) define unauthorised access/actions as violating established rights and norms for accessing or using information.A virus is a tiny software that infects executable files, file allocation blocks, or the boot sector of media and

documents prepared with office programs (Latchoumi et al., 2020).SummaryThe Internet symbolises globalisation, which was explained in the first chapter. The globalisation of Internet users is increasing the popularity of online shops. As a communication hub, it orchestrates network commerce elements. The advantages of the Internet extend beyond international trade. Globalisation has resulted in data breaches, which are elucidated. It is transpiring at an unparalleled velocity, and e-commerce experts may encounter it at any moment. Recent statistics indicate many data breaches that undermine brand confidence. The project's objective is to delineate stages of cyber fraud prevention, prevalent causes, and the effectiveness of preventative remedies. The research must include a method for attributing data related to different types of credit card theft. The project's contribution to the popularisation of online shopping during the COVID-19 pandemic and retail mall closures is also acknowledged. In response to the increasing prevalence of online consumers, new fraudulent schemes have surfaced, necessitating enhanced security protocols. This study will examine these issues. Initially, it is essential to identify the most prevalent types of credit card theft, evaluate the efficacy of various protective measures, and explore strategies to mitigate risk. The theories and terminology pertinent to this study align with the research questions. This section of the first chapter comprises robust arguments and credible comments from scientists. These theoretical sources illuminate credit card data security. Subsequently, the project's limitations are addressed, primarily owing to the rapid escalation of cybercrime and emerging fraud tactics. Owing to ongoing breakthroughs in protective measures, there are an excessive number to address in a single volume. Assumptions include those related to the greatest and least effective protective techniques. The list of effective measures is extensive and encompasses several technology methods. Ineffective methods are sometimes associated with a too broad and non-tailored protection strategy. The first chapter concludes with a list of definitions. The semantic domains include "Types of credit card fraud," "Methods of personal data protection," "Confidentiality," and "Electronic commerce." Ultimately, a conclusion encapsulates the first chapter and preceding content. Procedures and Method Introduction The empirical aspect of the research entails using authors' expertise to identify deficiencies, weaknesses, and threats to information and software system security and protective measures. The expertise derived from certification and state examinations, case studies, and security audits of over 500 information security tools, products, portals, and systems in the secure execution by prominent international and American developers (Eslamkhah et al., 2019) underscores the necessity and hyper-complexity of assessing IT product information security compliance amidst the significant escalation in the complexity and dynamism of IT products. Software system security persists as an unresolved issue despite the commendable efforts of esteemed engineers (Baldassarre et al., 2020). Critical vulnerabilities persist, making code analysis a challenging task that must be addressed continuously throughout the software system's life cycle. Information security systems are mostly governed via tool certification. Professionals at testing laboratories and certifying bodies must coordinate and deliberate to implement practical solutions. This study aims to utilise appropriate procedures, measurements, and methodological approaches, which may prove highly valuable. The significant societal interest in this topic in America over recent years necessitates consideration of technical development, encompassing various social phenomena. In light of the inevitability of personal data regulation, all legal entities in the country have modified their strategies for safeguarding private information and its implications (Walters et al., 2018). Manufacturers of security products must adhere to certification rules in the American computer

security industry owing to competitive certification practices. This paper delineates conformity assessment via the use of international standards in the practical section. It encompasses the assessment of information security compliance. The certification of information security tools and their associated legal and regulatory framework are delineated below. Practical work entails using mathematical models and procedures to substantiate test results and facilitate task planning (Mamonova et al., 2020). It also provides formalised testing and information protection protocols in accordance with both traditional and contemporary regulatory standards. The practical component of this article will evaluate security protection compliance to ascertain if the requirements for products, processes, and systems are met. Kurpayanidi (2019) characterises conformity assessment as the processes of testing, control, certification, and accreditation. This chapter will use several conformity assessment methodologies. Conformity assessment operations in information security include certification of information systems, testing, and control in accordance with established standards. Software, information systems, and information security management systems may undergo audits to evaluate information security. The most effective conformity assessment techniques for technological means and protection systems include testing, certification, auditing, and risk analysis, along with the certification of information security tools. Testing is an evaluative procedure for conformity evaluation. Experiments are used to ascertain the quantitative or qualitative characteristics of the test object throughout its operation, modelling, or effects. Certification authenticates the data processing capabilities of informatisation facilities. Certification exams, which meticulously evaluate the safeguarded information, constitute its fundamental essence. This transpires in real operational contexts to ascertain that the enacted procedures and protective strategies comply with information security requirements. Certification assessments confirm that the informatisation object satisfies program efficacy criteria. It first safeguards data against unwanted access, including computer viruses. Specialised devices incorporated into information technology products inhibit leakage and exposure (Kamalieva et al., 2020). Software testing identifies issues and deficiencies in the implementation of software properties. Contemporary software development incorporates testing inside the software quality management system across the whole life cycle. International standards define testing as a technical procedure that assesses one or more attributes of a product, process, or service using an authorised method. In the practical segment, the synthesis of the specified approaches for demonstrating the effectiveness of information security instruments will be used. Project Design for Research: Initially, choose the most critical testing areas from the comprehensive list to implement the project. The methodology for assessing software security vulnerabilities must be established. Consequently, it will be possible to discern a vulnerable blind spot for further data expropriation. The enforcement of access control regulations must be verified. It intercepts both explicit and implicit requests, precisely distinguishing between permitted and unauthorised requests based on specific and mandatory criteria. Note that vulnerability testing differs from manual testing. Vulnerability testing detects flaws, whereas manual testing rectifies them. Manual penetration testing (pentests) safely infiltrates the online store's infrastructure to assess its security (Ghanem et al., 2019). This may occur via operating system, service, or application vulnerabilities, improper configurations, or negligent user conduct. The organisation is under assault to see whether hackers can infiltrate them. The test results indicate the extent of potential infiltration by an attacker and the volume of data they may extract or exploit. A series of measures is required to monitor and identify system and software vulnerabilities in the event of illicit third-party

interference, unauthorised access, and data replication. This is an examination of data privacy. Consequently, many complimentary verification techniques should be used (Panchekha et al., 2019). Security testing will concentrate on mitigating risks to the integrity of systems, software, and personal data. Security measures include assessing the resilience of applications and programs against viruses, spyware, hacking attempts, and malware. Select the most effective tool for managing payment banking systems in e-commerce platforms. Evaluate the safety of private data using the designated tools. A subsequent requirement is a compilation of programs that restrict third-party user access to certain information. They must also validate data integrity, including application, software, and segment self-recovery after unforeseen failures. The nature of the applications under evaluation dictates the requisite security level; hence, criteria must be defined. White, grey, and black box methodologies may be used to enhance software security (Park, 2019). White box testing presupposes that the user is familiar with the system's functionalities and idiosyncrasies. Grey boxes exhibit limited awareness, but black boxes do not possess any awareness. Each method has distinct results and effectiveness. Criteria must be set to determine the most suitable solution for a certain circumstance. Code static analysis, vulnerability and bug searches, and product certification readiness evaluations must be conducted consistently. Sampling procedures are established, and the optimal Internet data protection solutions from four categories are selected. This includes antivirus software, firewalls, network intrusion prevention and alert systems, and vulnerability assessment tools. Classic, proactive, and integrated antivirus software is available. Traditional antivirus systems use signatures to detect recognised pathogens. Proactive virus prevention systems defend the system against infection; integrated programs use both methods. This analysis examines linked programs, since they constitute the bulk of the market. Corporate programs may deploy updates for several users from an internal server, in contrast to personal programs. Consequently, in the selection of antivirus software, real-time virus and Internet threat prevention using cloud technologies, as well as a module for Internet payment security, were taken into account. The use of antivirus packages was influenced by the availability of platforms (Windows, Android, Mac OS) (Shah et al., 2021). The malware and adware detection speed of the site and major apps was evaluated. The sample was assembled using several criteria, since firewalls prevent computer threats, in contrast to antiviruses. The simplicity of setup and the presence of a training mode are the key prerequisites for a firewall. Applications must promptly terminate network attacks, oversee traffic from installed applications, detect viruses and malware, and obstruct advertisements during payment transactions. The specified firewalls were required to protect the store's webpages from attacks, viruses, and malicious code while addressing various vulnerabilities that could jeopardise client security (Kaplan et al., 2019). The designated utility must also oversee the incoming and outgoing traffic of other applications. The Internet connection will be immediately blocked if the process seems dubious. Programs should have many major modules or components to tailor protection according to use. These firewalls offered adaptable network traffic regulation, rule formulation, and password-secured configurations. Subsequently, a prototype of Data Loss Prevention (DLP) systems (software or hardware-software integrations) was developed to prevent unauthorised disclosure of confidential information outside the corporate network. The sample focused on the effectiveness of business and external data flow analysis. The response rate was evaluated based on whether a pre-established regulation or policy governed the transfer of sensitive information. The system obstructed transfers or notified security personnel at a certain moment. The control subsystem architecture dictates the kind of DLP system: network,

agency, or hybrid (Guzairov et al., 2018). Network solutions use centralised data traffic monitoring by transmitting mirrored copies to specialist servers for analysis in accordance with security protocols. Analysing just network traffic complicates the comprehension of user management of private information. Analysts indicate that encrypted data constituted over 60% of worldwide web traffic in 2019, with the increasing use of messengers, cloud services, and other specialist information exchange apps complicating leak protection in the absence of workplace oversight (Dmitriev, 2020). Consequently, only hybrid software complexes were selected. The most recently developed sample includes vulnerability scanners. The global vulnerability scanner business is expanding. These tools currently serve as project-orientated vulnerability management solutions. Ultimately, vulnerability monitoring initiatives include several departments. We used contemporary scanners integrated with risk management, patch management, incident management platforms, and secure development protocols for our inquiry. Data Sources: Without a comprehensive analysis of all components of the specified instruments' activities, the protection of e-commerce processes cannot be validated. Extensive quantities of hand-obtained primary data may be erroneous. Erroneous data used for decision-making may jeopardise the protective mechanism. The volume of primary data also influences the comprehensiveness and precision of the protection strategy. Automated data collection and processing techniques are used due to their speed, accuracy, and reduced labour requirements. Numerous tools serve as preset information sources for these automated processes. Initially, these sensors monitor the program's response time to system anomalies. These devices assess system issues. The majority of data was obtained during static testing. Malware scanning on demand is implemented. A static test was conducted on several malware files to get pertinent information. The tests used samples from the preceding six months and assessed hard disc on-demand results. Products were examined across many domains for certification, including the identification of all viruses on the list that might jeopardise customers' financial information (Noeiaghdam, 2019). The program must detect and eliminate viruses from the system. Statistical observation was used to document facts and their indicators characterising the efficacy of Internet security measures against bank data breaches, following a singularly planned program. In the first observation, a monitoring program was established, including a catalogue of data-gathering sites along with relevant indications and indicators. The performance criteria from the Sampling Procedure section were integrated. The form also included viral detection status, heuristic analysis, false positive rates, and treatment for current infections. The ratio of harmful objects to analysed files established the detection threshold. Heuristic analysis facilitated the identification of signatures and the detection of updated viruses even when the signature does not completely align with the characteristics of an unknown program, provided that there are broader indicators of a virus present in the suspicious program (Sing et al., 2021). This method may elevate false positives; hence, newer applications use it judiciously. The ratio of false positives was evaluated for collections including several non-malicious files. The quantity of false positives and their proportion relative to the overall file count were then calculated. A blank monitoring program was used to enter primary data and technical specifications of the studies. Instructions detailing the tests and the parameters under investigation at this step were crucial for completing the form. Consequently, a statistical aggregate was compiled as a set of indicators for information data security technologies, sharing a similar qualitative foundation (program objective) while possessing unique characteristics. Consequently, homogeneous, dynamic, independent data units were acquired. Reaction rate data was gathered from minute samples, in

contrast to static testing. In a specific kind of response rate testing, larger, however still small, test sets were used to illustrate the general indicators of each antivirus provider. Furthermore, specific malware discoveries were not disclosed. In a separate assessment, each sample was evaluated individually. Dynamic testing sought to replicate the genuine user environment for the evaluated security system using all available methodologies. The properties of the new security tool, which are inapplicable in a typical testing environment, make its need more apparent. The closest test to real-world conditions indicated that the malware detection efficacy of some solutions was inferior to their detection rates while analysing infected files on demand. The dynamic testing findings were validated for dependability and completeness as primary statistical data. Electronic commerce information security practitioners were interviewed for the practical aspect of the study. During the interview, they examined their preferred security protocols for specific businesses and their strategies to prevent bank data breaches. The interview questions addressed information risk analysis techniques and the challenges associated with the installation, configuration, and maintenance of technical information security measures. Every online trading company employs IT personnel. They perform various positions based on a company's operations, specialism, and responsibilities. The respondents included computer security experts from many fields. Security engineers provide comprehensive security throughout the organisation. They provide security training and recommendations for internal employee groups, assess security solutions, assist in personnel selection, and conduct information security management. A cybersecurity specialist verifies the efficacy of the company's software security measures. A seasoned cloud security engineer safeguards databases inside digital cloud infrastructures. Information security auditors specialise in assessing susceptible systems. The optimal structure for banking information security and data processing was investigated with operational security personnel. Network and Internet security specialists addressed enquiries on safeguarding all business computers from viruses and malware. Application security professionals were sought after for their expertise in mobile app resilience. An interview with recovery specialists, who assist post-attack, was essential. They preferred rapid data security techniques to mitigate espionage, prevent data breaches, and eliminate viruses. The extensive interview segment was designed for all electronic commerce information security specialists to identify their preferred hacking tools. Defining the workplace's direction and specifics was also necessary. The frequency of use of certified and licensed programs was subsequently revealed. Motivations and factors were evaluated while choosing a client data protection solution. The interview included leading questions on browser client deficiencies and web application vulnerabilities. The third segment of the discussion with e-commerce information security experts addressed the mitigation of real-world threats. The first component addressed undesirable content: information-accessing products and instruments. These technologies include malware and perilous connections. Enquiries ensued about combating hackers, intercepting communications, and preventing data theft. A fraudster's hacking and a victim's inadvertent provision of access may both result in unauthorised entry. The most significant aspect was the experience with fraud, particularly with the use of technology to embezzle funds. This segment included the acquisition of personal data, usernames, passwords, and credit card information, as well as the use of surveys and questionnaires. Currently, online retailers are integral to commercial enterprises. Iavich et al. indicate that hundreds of attacks transpire daily on small corporate websites, with over 40% of hacking incidents occurring in this context (2019). In light of rapid expansion and a competitive landscape, several organisations prioritise security. Following

interviews with information security professionals, surveys were conducted with corporate executives to gather data. This survey determined the least effective security measures, which should be excluded from the final evaluation (Torten et al., 2018). The management was interrogated over the adequacy of the online store's security protocols. Online store proprietors were also enquired about their readiness for the escalating instruments of assailants and their apprehensions about potential future assaults. Their experiences in gathering confidential information, especially personal data, and infiltrating their company's information systems were scrutinised. Research was conducted on hacker attacks targeting business web and mobile applications. The adverse impacts of security vulnerabilities on e-commerce sector executives were assessed. The website was deemed unreachable after the installation of a malicious script by attackers that altered the page content. A foreign text is shown instead of the product catalogue. The survey revealed that customers abandoned purchases and shifted to competitors while the team rehabilitated the site after a hacking incident. Upon the infiltration of security information into the network, it disseminates rapidly; hence, the exodus of the audience was also analysed. Regaining brand trust is challenging after a certain duration (Wilis et al., 2020). Online consumers will only make purchases if they have confidence in the enterprise. Upon the reporting of security concerns, some users transfer to competitors. The poll assessed the level of confidence the target audience has in the respondents' stores. Additionally, the survey results identified the requisite pricing and quality for information security managers. To elucidate this figure, it was determined who is responsible for information security inside the business (Norbekov, 2020). A dedicated, full-time structural unit inside an information security organisation was proposed as the preliminary option. The second answer came from an individual or many personnel external to the information security section. Managers of electronic stores with security provided by a third-party information protection service were required to choose the third option. The poll excluded managers from firms that do not safeguard data. Subsequently, managers selected the professional qualifications of their information security personnel from the provided list. Proposals were made for the automation of security information analysis, computer system and network security, and the protection of automated system information. Identifying, averting, and eradicating cyberattacks, together with the technological safeguarding of information, technologies, and labour organisation, were viable alternatives, as were economic, geopolitical, and social transformations. If respondents replied affirmatively, they were prompted to forecast new information security positions inside the business. Subsequently, management needed to choose if they would replace equipment in the next year. A list of potential positions was included to streamline the task, including analysts in extensive data security, intricate cyberattack detection, and system security. Experts in information security specialising in data analysis for fraud detection, artificial intelligence, distributed ledger technology security, and computer incident response were also viable responses. The research enquired of managers on their desired protective measures, emphasising the significance of robust indicators. Document analysis data was examined by Liu et al. via penetration testing and an information security assessment (Liu et al., 2021). He demonstrated that shortcomings in web application protection remain a significant information security concern. Attackers often use web application vulnerabilities to steal information and infiltrate commercial information systems. Nirmal's data indicate that XSS attacks, SQL injections, anomalous circumstances, CSRF forgeries, and malware infections pose the greatest threats to web application security (Nirmal et al., 2021). The subsequent literature source demonstrates that web application protection must

account for specific factors intrinsically linked to its functionality (Kim et al., 2021). Consequently, users, customers, and partners must have round-the-clock access to the online store's website and web applications, including payment functionalities. Abideen et al. (2019) assert that firewalls and SSL do not safeguard online applications against attacks. The site must remain accessible from external networks. Manual discovery and remediation of vulnerabilities in applications, websites, or online portals often proves ineffective, as noted by Li et al. (2020). Developers may identify and fix several vulnerabilities, while an attacker needs just a single weakness to prevail. The document analysis indicates that primary security for the online store's website must be included throughout the design and payment application development phases. Timely updates during operation are essential. Bavel et al. provide a web application security strategy based on an online store model, examining its functionality, vulnerabilities, and principal threats (Bavel et al., 2019). Every online shop is a web application linked to an e-commerce system; thus, the secure online store model must protect against fraud and unauthorised access to customers' financial information. This necessitates fraud prevention, payment data security, and online vulnerability safeguards. The subsequent research included two tests (Zeng et al., 2020). The first experiment investigated the impact of an assailant introducing malicious JavaScript code using a CSS attack to get the online store administrator's cookie. The second experiment of this article included modelling user registration and payment data to evaluate the efficacy of the payment data protection module. Each experiment started with the protection modules disabled, followed by a repetition with them enabled. The second experiment simulated online store user registration and payment data input into the database to evaluate the efficacy of the payment data protection module. When the payment data security module was disabled, the payment information of online shop customers was stored in the database unencrypted. Consequently, if an assailant acquires unauthorised access to the database, they will be able to seize the payment information of the online store's clientele. With the payment data protection module activated, the payment information of the online store's clients is kept in the database in an encrypted format. Consequently, if an assailant has unauthorised access to the online store's database (for instance, by exploiting server weaknesses), they will possess consumers' payment information in encrypted format. They will be unable to utilise them for their own objectives without employing cryptanalysis tools.

Focus Groups. The focus groups comprised five of the most prominent security applications within each category emphasised in the Sampling Procedure chapter.

Antivirus Software. The antivirus software market is currently vast, yet certain programs have solidified their presence in the market. Avast antivirus has consistently ranked among the top free malware protection software for numerous years (Nurhayati, 2019). It offers robust security, including an integrated VPN and gaming mode, can generate boot copies, and evaluates the risk of Wi-Fi networks. Antivirus Plus is among the most renowned antivirus solutions globally, created by the Romanian firm Bitdefender (Shedid et al., 2019). The arsenal includes a comprehensive array of capabilities to thwart any viral assaults. A specialised software core concurrently reduces CPU load, so averting performance decline during operation. Dr. Web CureIt operates swiftly and effectively, capable of detecting infections that standard antivirus programs would overlook (Uchenna et al., 2018). The tool will swiftly examine any disc, partition, or directory, enabling the user to selectively choose items for inspection. Kaspersky Lab frequently achieves top results in antivirus evaluations. This research analyses Kaspersky Security Cloud, which the business claims

represents a novel advancement in security, integrating two decades of accomplishments from Kaspersky Studio (Tchernykha et al., 2018). Given the proliferation of diverse malware in recent years compared to other threat categories, MalwareBytes is one of the most effective tools for combating it (Pisula, 2019). It enables the simultaneous scanning of the system for different viruses and their removal without disrupting site operations. Firewalls: According to the study by Movahedi et al., Windows is the most susceptible operating system, therefore justifying the need for built-in security (Movahedi et al., 2019). Alongside its renowned antivirus, Avast also offers a firewall, which is part of the premium suite of Avast Premium Security applications (McIntosh et al., 2019). It includes an antivirus, an anti-spam module, a wireless network protection module, and other capabilities. PeerBlock differs somewhat from the other firewall applications mentioned in the document. Rather than obstructing applications, PeerBlock restricts a compilation of IP addresses associated with certain categories (Abdi et al., 2020). For instance, it may download and obstruct a compilation of IP addresses identified as business suppliers, advertisers, spyware, etc. pfSense is a premier network firewall with commercial-grade features. It is an open-source security solution based on FreeBSD (Wada et al., 2021). Sophos is an emerging leader in the cybersecurity sector, and their software is an excellent choice for safeguarding enterprises. The XG Firewall Business Edition security technology is far more sophisticated than conventional firewall software (Stoynov et al., 2021). ZoneAlarm is a reputable firewall with a user-friendly interface (Muzammil et al., 2019). The user-friendly interface conceals numerous functions, including the selection of protection levels tailored to meet diverse business requirements. Tools for Preventing Network Attacks In the realm of intrusion prevention solutions, the product from Positive Technologies is featured (Arefin et al., 2020). The application executes all operations in real time without impacting the business's network activities. The next-generation firewall is an advancement above conventional firewalls, with the capability to oversee the state of connections. The primary producer of NGFW solutions used in this study is UserGate (Anlei et al., 2020). The document further introduces a proxy server equipped with information security capabilities, sometimes referred to as a web filter. Smart-Soft is engineered and refined to adhere to the company's online security protocols and regulate user access to websites (Mimura et al., 2018). To mitigate attacks aimed at vulnerabilities without established protection, there exists a category of network security solutions. Consequently, Cisco's primary responsibility is to examine the file sent across the network device for malicious code (Alfarsi et al., 2019). The InfoWatch data leak prevention system is the last in this focus group. It is intended to identify and avert possible breaches of data confidentiality and personal information, such as credit card numbers (Shabalin et al., 2020). Vulnerability scanning tools are essential instruments within information security departments, as new vulnerabilities emerge daily, creating potential risks for the organisation. The OpenVAS Vulnerability Scanner is a sophisticated tool for vulnerability analysis, enabling the scanning of servers and network devices (Dissanayaka et al., 2020). This scanner identifies an IP address and examines open services by probing open ports, misconfigurations, and vulnerabilities in existing entities. F-Secure Radar is a product of F-Secure, a firm engaged in the antiviral sector (Karantzas et al., 2021). Radar is a cloud-based solution that functions as both a vulnerability scanner and a platform for vulnerability and asset management. Astra is a comprehensive cloud-based VAPT tool specifically designed for e-commerce (Sodhi, 2020). It includes a suite of programs, malware, and network assessments to evaluate the security of a web application for processing payment orders. W3Scan is a complimentary console vulnerability scanner including over 1200 integrated plugins

(Muliński, 2020). They can identify fingerprints of web pages, assess port configurations, analyse website architecture, detect numerous prevalent vulnerabilities, and check for SQL Injection. Sn1per is a robust framework for automated target security assessment (Li et al., 2021). This project will include extensions such as Findsploit (for rapid identification of exploits related to vulnerabilities) and PrivEsc (for the detection of local issues). Observations: The test was executed on a specifically configured platform using VMware Workstation. A pristine virtual computer with the Microsoft Windows XP SP2 operating system was replicated for each antivirus product (Singh et al., 2018). All activities indicated by the antivirus product, including system reboot and updates, were executed during installation. The antivirus settings were unchanged and stayed at their default configuration. A distinct clean virtual computer was designated for each antivirus product. The compilation stored on an external hard drive was examined. The scanning of a directory containing virus samples designed to exfiltrate banking information was initiated on request in each evaluated antivirus program. The five chosen antivirus programs exhibited the following malware detection rates: Avast: 95.52%; Plus: 78.27%; Dr.Web CureIt: 89.46%; Kaspersky Security Cloud: 96.49%; MalwareBytes: 56.02%. Subsequently, a firewall assessment was performed, wherein a security testing application was initiated to evaluate the efficacy of the firewall software. The firewall test included the examination of a series of rules, namely the evaluation of manual rules inside a firewall. During testing, the software attempted to exploit ports using certain network protocols to access financial data. Upon completion of the software, a report was produced detailing the susceptible ports and protocols inside the network. The Hypertext Transfer Protocol (HTTP), File Transfer Protocol (FTP), and Money Transfer Protocol (MTP) were evaluated (Akanji et al., 2012). This procedure was created to thoroughly examine all open ports on the network, perhaps numbering in the thousands. The quantity of used ports inspected by each firewall was recorded as follows: Avast: 863; PeerBlock: 874; pfSense: 812; XG Firewall Business: 844; ZoneAlarm: 930. The last phase included evaluating solutions to mitigate network threats. During the examination, controlled penetrations were conducted to ascertain the thoroughness and accuracy of the intrusion report. The detectors gathered event data and used several metrics to ascertain that the analysed activity diverged from the usual. Ten controlled assaults were executed using five distinct methodologies used in attacks on remote banking payment systems. Each tool recorded the quantity of unauthorised login attempts. The frequency with which the tools successfully disrupted access to mobile banking was estimated out of 10 attempts. The following findings were recorded: Positive Technologies: 9; UserGate: 7; Smart-Soft: 7; Cisco: 9; InfoWatch: 8. In the concluding phase of the observation stage, a testing method was conducted to evaluate the performance of vulnerability scanners for e-commerce sites. The previously generated test material for functional verification of all technical requirements contains many vulnerabilities. The whole class of comparable vulnerabilities identified on the test site was regarded as a single vulnerability. Scanners with the specified configurations were deployed on the evaluated site, and a series of functional tests was conducted. Subsequently, the web objects identified by the scanner (distinct links, vulnerabilities, attack paths, etc.) were quantified and categorised. Observations yielded the following data on discovered vulnerabilities: OpenVAS Vulnerability Scanner: 75, 20%; F-Secure Radar: 79, 27%; Astra: 94, 24%; W9scan: 88, 46%; Sn1per: 90, 14%. Data analysis indicates that all chosen tools demonstrated a commendable degree of protection. Kaspersky Security Cloud and ZoneAlarm occupy the top place in the ranking, with scores of 96.49% and 930, respectively. The second place in the ranking is held by both Avast products, which have shown exceptional

performance. MalwareBytes antivirus software and OpenVAS Vulnerability Scanner ranked last and had the lowest efficacy, with results failing to surpass 80%. Consequently, four levels of control were delineated, and the programs and instruments pertinent to the investigation were allocated accordingly. Three primary layers of protection may be identified, focusing on software and hardware. The first-level technologies effectively identify and eliminate recognised viruses. Second-level programs effectively identify and eliminate unknown viruses, while the third level of protection includes a built-in function for blocking virus manifestations. The scanning method is most effective for detecting and eradicating known viruses. It involves identifying computer viruses using their distinctive segments of program code (signature, program strain). F-Secure Radar, Astra, W9scan, and Sn1per have effectively developed a scanning database including code fragments of recognised computer viruses. They conducted virus detection by comparing the data in the computer's memory with the established codes of the scanning database. Astra and Sn1per excelled at detecting and deciphering the coding of the new malware. They included the most quantity of viral signatures into the scanning database. The distinctive feature of F-Secure Radar was its capability to accurately repair and disinfect compromised segments of the electronic payment system. It is important to note that W9scan does not keep the signatures themselves; rather, it retains checksums or signature extensions. The deficiencies of the primary tools, particularly scanners, were ascribed to their capability to identify viruses that have already infiltrated computer systems, which have been analysed and for which a signature has been established. To ensure successful functioning, the scanning database must be regularly replenished. The detection and eradication of undiscovered viruses are essential to safeguard against those overlooked by the first tier of antivirus protection. The most efficient approach is system integrity monitoring (change detection), which is used by the majority of the tools examined in this research. Both antivirus software and firewalls effectively assessed and contrasted the present characteristics of the computer system with the reference parameters indicative of its uninfected condition. 80% of the examined tools effectively safeguarded the information resource against unauthorised alteration and destruction due to different forms of illicit interference, as well as system and environmental failures. Consequently, all tools for preventing network assaults (Positive Technologies, UserGate, Smart-Soft, Cisco, and InfoWatch) performed their functions at a comparable level, warranting their classification as second-tier solutions. Moreover, all antivirus programs and brandmasters uniformly succeeded in addressing the aforementioned second-level tasks. The highest tier of protection, which entails obstructing virus manifestations and safeguarding against harmful actions and replication of computer viruses that have surpassed the initial two levels of defence, can be ascribed to over fifty percent of the analysed antivirus solutions and firewalls. The techniques used by Avast, Dr.Web CureIt, and Kaspersky Security Cloud antiviruses, together with Avast, PeerBlock, XG Firewall Business, and ZoneAlarm firewalls, rely on the interception of virus-specific functionalities. Dr.Web CureIt and XG Firewall Business operate on the basis of program filtering, making them somewhat less effective than other products that function as hardware controls. In the context of worldwide public networks, particularly regarding consumer payments, third-level security systems conducted antivirus monitoring of all transmitted traffic. It may be executed via many methods: by deploying an antivirus proxy server or by including an antivirus module with a firewall. The drawbacks of these controllers include the absence of an autoconfiguration mechanism. Consequently, there exists a potential for conflicts with other system programs, including additional safety protection measures. Summary: The

chapter on methods and methodology started with an introduction delineating the research's stated aim. The context of the intricate procedures is established during which the functionality of technologies designed to safeguard the confidentiality of personal data for both the client and the seller will be evaluated and assessed. Subsequent to the introduction, the design of the research study was provided. This section provides a description of the research methodologies and algorithms used to address the objectives outlined in the study. Furthermore, it encompasses a delineation of the organisation and content of the study, including research procedures and criteria for assessing the study's outcomes. Subsequently, it provides a description of the sampling procedures essential for evaluating the quality of research subjects and ascertaining their characteristics through reliability metrics. The chosen samples will comprehensively represent the analysed composition indicators for the current timeframe. Furthermore, the principal criteria for sampling used in the composition of the work are discussed. Following the exposition of the sampling technique, the sources of data collection are delineated. This study employs a statistical technique, and the recommended procedure of direct observation is presented. The measuring and counting procedures used for the registration of the researched units are elucidated. This section includes details of a recorded observation that included gathering information via a literature study, followed by a description of a structured interview using open-ended questions performed with security experts in the e-commerce domain. The obligatory interview strategy, including the order of questions and their phrasing in an open format, was delineated. The response choices and the criteria for categorising the interviews into groups were standardised. Alongside interviews, a survey of e-commerce company executives was used as a tool for gathering primary information. It allowed for a written appeal to a designated group of individuals (respondents) using information security features in their application or on their website. The methodology for statistical processing and interpretation of the collected replies was established. The subsequent section of the third chapter included the compilation of theoretical material on data protection phenomena and processes using documentary sources. Data from the documents was retrieved and documented, thereafter used to investigate the research topic. The analysis of the documents examined characteristics and properties of security content in electronic commerce, serving as primary criteria for evaluating the protection level of bank data. The study includes four focus groups, with the first being antivirus software. The five most prevalent antivirus software solutions for securing IT infrastructure in the corporate e-commerce industry are delineated. Subsequently, a focus group of five firewalls is identified during the interview as the most effective tools for traffic regulation. This article delineates the primary functions performed by the firewalls discussed. The strategies and benefits of each of the five software applications are delineated. The significance of using tools to avert network assaults in business environments has been recognised for an extended period, so five analogous programs are included in the third focus group. The article identifies the manufacturers deemed most successful by the interview participants. The interview participants affirmed that data leaking occurred more often than monetary theft. This illustrates that the diamond fraud theory alters the motivational factors for offline fraudsters. It includes minor information on how a specific application addresses bypass technique and offers a concise overview of attack protection mechanisms. The identification of possible threats is a crucial phase in guaranteeing information security. Consequently, based on the feedback from the questioned IT professionals, a focus group including five prospective vulnerability scanners was assembled. A concise synopsis of each network scanner has been compiled, detailing the specific duties they are

designed to address. Additional insights about the evaluation of the chosen programs were provided. The procedure for evaluating each focus group is outlined, and the resulting indications are presented. This section provides the statistical data obtained from the analysis of the four categories of protection. The concluding section of the third chapter presents an analysis of the data acquired during the observation of the testing. Although some chosen applications demonstrated a high, third degree of data security protection, none proved to be entirely successful. Consequently, it may be inferred that the most dependable approach is to integrate many bank data security solutions simultaneously.

сиёсий фанлар бўйича фалсафа доктори (PhD)
https://doi.org/10.5281/zenodo.14736095

Аннотация. *Ушбу мақолада жамиятда кенг тарқалган коррупциянинг турлари ва уларнинг салбий оқибатлари, содир этилиш усуллари изоҳланган бўлиб, сўнгги йилларда аниқланган коррупциявий жиноятларнинг тавсифи асосида божхона органларида коррупцияга қарши курашишнинг долзарблиги, ушбу тизимда кенг тарқалган коррупция турлари ва қарши курашишни такомиллаштиришга қаратилган таклифлар илгари сурилган. Мақола аниқ статистик маълумотлар ва тадқиқотчиларнинг фикр-мулоҳазалари билан асослантирилган.*

Калит сўзлар: *коррупция, кронизм, непотизм, фаворитизм, порахўрлик, лоббизм, протекционизм, патронаж, клиентилизм, Transparency International, Trace Matrix, Open data inventory*

Аннотация. *В данной статье описываются виды коррупции, распространенные в обществе, их негативные последствия, способы совершения. На основе описания коррупционных преступлений, выявленных в последние годы, обоснована актуальность борьбы с коррупцией в таможенных органах, рассмотрены виды коррупции, распространенные в данной сфере. системы, а также выдвигаются предложения, направленные на совершенствование борьбы с ней. Статья основана на точных статистических данных и мнениях исследователей.*

Ключевые слова: *коррупция, кумовство, непотизм, фаворитизм, взяточничество, лоббирование, протекционизм, покровительство, клиентелизм, Transparency International, Trace Matrix, Open data inventory*

Abstract. *This article describes the types of corruption, common in society, their negative consequences, and ways of committing them. On Based on the description of corruption offences revealed in recent years, The article substantiates the urgency of the fight against corruption in customs authorities and considers the types of corruption common in this area. types of corruption prevalent in this sphere. of the system, as well as the proposals aimed at improving the fight against corruption in customs authorities are put forward. proposals aimed at improving the fight against it. The article is based on accurate statistical data and opinions of researchers.*

Keywords: *corruption, nepotism, nepotism, favouritism, bribery, lobbying, protectionism, patronage, clientelism, Transparency International, Trace Matrix, Open data inventory*

КИРИШ

Коррупцияга қарши курашиш масаласи Янги Ўзбекистон ўз олдига қўйган мақсадларга эришишдаги танлаган муҳим вазифаларидан бири ҳисобланади. Ўзбекистон Республикаси Президенти Ш.М. Мирзиёев томонидан мамлакатда барча соҳалардаги

коррупцияга қарши курашиш борасида амалга оширилаётган кенг кўламли ва тизимли ислоҳотлар дунё ҳамжамияти томонидан юксак баҳоланмоқда.

Хусусан, 2023 йил 19 декабрь куни Ўзбекистонда коррупцияга қарши кураш бўйича халқаро мукофотни топшириш маросими ўтказилганлиги юқоридаги фикр исботи ҳисобланади. Шунингдек, Тошкент шаҳрида қўл кўринишида коррупцияга қарши курашишни англатувчи монумент ўрнатилди[1].

Эътиборлиси шундаки, давлат раҳбари ушбу иллатга қарши курашиш қанчалик долзарб эканлигини жахон ҳамжамиятига қуйидагича изоҳлаб берди: “коррупциянинг дунё миқёсидаги зарари 3 триллион долларга яқин миқдорни ташкил қилиши, аммо бу рақамлар ҳақиқий ҳолатни ва коррупция натижасида кўрилаётган реал зарарнинг аниқ ҳажмини тўлиқ ифода эта олмайди”[2].

Мамлакатда коррупцияга қарши курашишда амалга оширилаётган ислоҳотлар шу жумладан божхона органларида ҳам кескин тус олмоқда. Ўз ўрнида, Янги Ўзбекистоннинг рақамли божхона хизматини коррупциядан ҳоли тизимга айлантириш ғояси асосида соҳада тизимли ишлар йўлга қўйилган.

Ушбу мақолада, коррупциянинг кенг тарқалган турлари ва сўнгги йилларда божхона органларида амалга оширилган чора-тадбирлар натижасида аниқланган коррупцион ҳолатларни келтириб чиқарган сабаб ва омиллар таҳлили бўйича илмий асослантирилган мулоҳазалар келтирилган.

МАВЗУГА ОИД АДАБИЁТЛАР ТАҲЛИЛИ

Коррупцияга қарши курашиш масалалари барча илмий мактабларнинг кўплаб мунозараларига сабабчи бўлган долзарб муаммолардан бири ҳисобланади. Айрим тадқиқотчилар сиёсий-ижтимоий жиҳатдан коррупциянинг фақат зиён келтирувчи жиҳатларини ўрганган бўлса, иқтисодчилар, шунингдек, жамиятшунослар томонидан коррупция натижасида “ривожланиши” мумкин бўлган соҳалар ҳам тадқиқ қилинган. Шунингдек, коррупцияни турларга бўлиш бўйича ҳам кўплаб илмий тадқиқотлар ўтказилган.

Жумладан, украиналик олим ва профессор В.Погрибна порани коррупциянинг “чақирув қоғози” деб таъриф берган [1]. Ушбу фикрга тўлиқ қўшилган ҳолда, коррупцияни ижобий ва салбий томонларини ўзаро солиштирган америкалик тадқиқотчи Р.Теобалднинг фикрларини асосли деб ҳисоблаймиз. Унинг фикрига кўра, коррупцияни иқтисодий ўсиш ва сиёсий ривожланишга ижобий таъсири мавжуд [2].

Шу ўринда таъкидлаш жоизки, шифокорга кўрсатилган тиббий ёрдам учун, шунингдек, ўқитувчига берилган билим учун одат тусига кирган “раҳмат” белгиси сифатида пул тақдим этилишини маиший коррупция деб қаралиши ёки қаралмаслиги бўйича турли ёндашувлар мавжуд. Хусусан, Е.Епифанова томонидан ушбу холатлар мансабга доир жиноят сифатида баҳоланади, касбга оид эмас ва инсонларда “чой пули” билан тиббиёт ходимларининг хизматларига миннатдорчилик билдириш мумкин деган тушунчани шаклланишига олиб келган [3]. Лекин, америкалик олим Г.Джеймснинг таъкидлашича, ўқитувчи ва шифокор томонидан кўрсатилган хизматлар учун миннатдорчилик билдирилиши лозим бўлмагани ҳолида “раҳмат” пулини тақдим этилиши ижтимоий хавфни

[1] https://www.gazeta.uz/uz/2023/12/19/monument/
[2] https://www.gazeta.uz/uz/2023/12/19/halollik-vaksinasi/

келтириб чиқармаганлиги учун ушбу ҳолатга коррупция призмаси остида баҳо бериш ноўрин деб ҳисобланади [4].

Ушбу ўринда Г.Джеймснинг фикрлари асосли деб ҳисоблаш мумкин. Чунки, коррупцияга қарши курашишда майда коррупциядан йирик коррупцияга қараб юрилиши оддий аҳолининг норозилигига сабаб бўлиши мумкин. Шу сабабли, фуқароларда коррупцияга қарши муросасиз ҳуқуқий онг шакллантириш бўйича чора-тадбирлар ўз самарасини кўрсатиши билан "раҳмат" пули тушунчаси ўз-ўзидан жамиятда йўқолиб кетади деб ҳисоблаймиз.

ТАДҚИҚОТ МЕТОДОЛОГИЯСИ

Мазкур мақолада мавзуга доир маҳаллий ва хорижий олимларнинг номзодлик диссертациялари, мақолаларини таҳлил қилиш ҳамда ёндашув ва қарашларини тадқиқ этиш, уларга нисбатан муаллифлик муносабатини билдириш, шунингдек омилли, қиёсий ва статистик таҳлилдан фойдаланилди.

ТАҲЛИЛ ВА НАТИЖАЛАР

а) Коррупциянинг турлари ва уларнинг ўзига ҳослиги

Янги Ўзбекистон учун коррупция асосий таҳдидлардан бири эканлигини яна бир изоҳи унга қарши курашиш масалалари референдум йўли билан 2023 йил 30 апрель куни қабул қилинган Янги конституцияда 4 ўринда "коррупция"га оид бандлар киритилганлиги билан исботланади. Хусусан, Янги конституциянинг 93-моддасида ҳар йили президент томонидан коррупцияга қарши курашиш йўналишида миллий маърузани эшитиш белгилаб қўйилган[3].

Шунингдек, коррупцияни олдини олишнинг институционал асосларини яратиш мақсадида ҳозирда 114 та давлат органлари ва ташкилотлари, шунингдек банкларда 1477 нафар штат бирлигидан иборат коррупцияга қарши ички назорат тузилмаларининг фаолияти йўлга қўйилди. Ушбу тузилмалар томонидан ўтказилган 4349 та назорат тадбирларида 342,6 млрд сўмлик маблағларнинг талон-торож қилиниши ва 928,9 млрд сўмлик молиявий қонунбузилиш ҳолатлари аниқланган[4].

Кўрилаётган чоралар натижасида Ўзбекистоннинг "Transparency International" коррупцияни қабул қилиш индексидаги ўрни 14 поғона, "Жаҳон одил судлов лойиҳаси" халқаро ноҳукумат ташкилотининг ҳуқуқ устуворлиги индексининг "коррупциянинг мавжуд эмаслиги" индикаторидаги ўрни 4 поғона, Жаҳон Бошқарув сифати индикаторлари (WGI)нинг "коррупцияни тийиб туриш" индикаторидаги ўрни 15 поғона, "Trace Matrix" порахўрлик матрицасидаги ўрни 16 поғона, Ҳукумат очиқлиги бўйича "Open data inventory" рейтингидаги ўрни 5 поғона кўтарилишига эришилди[5].

Лекин, жамиятда коррупция деганда унинг фақатгина порахўрлик кўринишидаги шаклинини жавобгарликка тортиш учун асос бўлади деган нотўғри тушунчалар ҳалигача сақланиб қолмоқда. Бунга сабаб, Ўзбекистон Республикаси Жиноят кодексининг 210, 211 ва 212 моддаларида порахўрликнинг 3 шакли пора олиш, пора бериш ва пора олиш-беришда воситачилик қилиш учун белгиланган жавобгарликнинг мавжудлиги ҳисобланади.

[5] Коррупцияга қарши курашиш тўғрисидаги иккинчи миллий маъруза Сенатга тақдим қилинди | Anticorruption.uz

Ваҳоланки, коррупциянинг бошқа турлари ҳам ижтимоий хавфлилик даражасига кўра жамиятга порахўрликдан кам зиён етказмаслиги асосланган ҳолда, сўнгги қабул қилинаётган норматив ҳужжатларда раҳбарларнинг жавобгарлик масалаларига алоҳида тўхтанилган ҳолда, улар томонидан содир этилган қариндош-уруғчилик, таниш-билишчилик каби хатти-ҳаракатлар учун ҳам жавобгарлик белгиланганлиги алоҳида кўрсатиб ўтилмоқда.

Хусусан, Ўзбекистон Республикаси Вазирлар Маҳкамасининг 14.10.2022 йилдаги “Давлат фуқаролик хизматчилари томонидан одоб-ахлоқ қоидаларига риоя этилишини таъминлаш бўйича қўшимча чора-тадбирлар тўғрисида”ги 595-сон қарори билан тасдиқланган “Давлат фуқаролик хизматчилари одоб-ахлоқининг намунавий қоидалари”нинг 10-бандида раҳбарларга кадрларни маҳаллийчилик, уруғ-аймоқчилик, таниш-билишчилик ёки шахсий садоқат белгилари бўйича танлаш, тайинлаш ёки тавсия этишга йўл қўймаслик мажбурияти юклатилган.

Таъкидлаш жоизки, кўп ҳолларда юқори даражадаги мансабдор шахслар томонидан маҳаллийчилик, уруғ-аймоқчилик, таниш-билишчилик ёки шахсий садоқат белгилари билан кадрларга муносабатда бўлиш коррупциянинг турлари эканлигидан бехабар ҳаракат қилишлари уларнинг ўзлари бошқарувидаги тизимни самарадорлигини пасайиб кетишига олиб келади.

Шунга кўра, барча даражадаги давлат хизматчилари томонидан коррупциянинг турлари ва уларнинг тавсифини билган ҳолда хизмат олиб боришлари мақсадга мувофиқ ҳисобланади.

Тадқиқотлар натижасига кўра, номланиш шаклларига кўра коррупциянинг турлари қуйидагиларни ташкил этади:

1. **Порахўрлик** – коррупциянинг энг кўп тарқалган турларидан бири ҳисобланади. Яъни, жамиятдаги бюрократик тўсиқларни пора орқали тезлик билан четлаб ўтилиши, кўзда тутилган мақсадга тезроқ эришишга имконият яратади.

Порахўрлик Ўзбекистон Республикаси Жиноят кодексига кўра жиноий қилмиш сифатида баҳоланади ва турдош жиноятлар яъни пора олиш (210-модда), пора бериш (211-модда), пора олиш-беришда воситачилик қилиш (212-модда), давлат органининг, давлат иштирокидаги ташкилотнинг ёки фуқаролар ўзини ўзи бошқариш органининг хизматчисини пора эвазига оғдириб олиш (213-модда) билан бирган қатъий тақиб қилинади.

Пора билан боғлиқ жиноятларнинг субъекти хар қандай даражадаги давлат бошқаруви ва органлари ходимлари ҳисобланади. Предмети эса моддий (пул ва қимматликлар), моддий қийматга эга хизмат кўрсатиш (жумладан, паст фоизли кредитлар бериш, текин туристик йўлланмалар бериш, уйни таъмирлаб бериш, қарздан воз кечиш, автотранспорт воситасини вақтинча бошқарувга бериш) ёки мулк ҳуқуқини бериш (уй, автотранспорт воситаси, интелектуал мулк) ҳисобланади.

2. **Таъмагирлик** – кўрсатилган хизмат учун моддий ёки номоддий қимматликларни талаб қилиб олиниши. Ушбу турдаги хатти-ҳаракатлар хизмат кўрсатилишидан олдин ва кейин амалга оширилиши мумкин.

3. **Совға бериш** – мансабдор шахсга у томонидан кўрсатиладиган хизматлар жараёнини тезлаштирилиши ёки доимий “ҳамкорлик”ни ушлаб турилиши учун амалга оширилади.

4. **Непотизм** - қариндош-уруғ ва ошна-оғайничилик алоқаларини ҳисобга олиб, биринчи ўринга қўйиб, камчиликлари ва бошқа хислатларига эътибор бермай сиёсатда ёки тадбиркорликда уларга махсус шароит яратиб бериш, қўллаб-қувватлаш, касбида ва ишида кўтарилиб бойлик орттиришда ёрдам бериш. Ушбу сўз лотинча nepos - уруғ, зот, насл, сулола ва иккинчи nepotis - набира, жиян сўзларидан келиб чиққан.

5. **Фаворитизм** – "юмшоқ" коррупциянинг энг кенг тарқалган турларидан бири бўлиб, мансабдор шахс томонидан ўзининг яқин алоқасидаги шахсларга ресурслар устидан назоратнинг бериб қўйилиши ёки хизмат кўрсатилиши тушунилади.

6. **Қариндош-уруғчилик** (кумовство) – бошқарув тизимини қариндош-уруғчилик алоқалари асосида қурилиши. Бунда, мансабдор шахс лавозимга келганидан сўнг ўзига қариндошлик тармоғига эга шахсларни ўзи раҳбарлик қилаётган тизим ёки тузилмада мавжуд бўш ўринларга ёки ўринларни бўшатиш орқали, кадрларни қабул қилишни шаффофлигини таъминламаган ҳолда ишга олади.

7. **Кронизм** – бошқарув тизимини таниш-билишлик ёки ошна-оғайничилик алоқалари асосида қурилиши. Мансабдор шахснинг ўзи раҳбарлик қилаётган тузилма ва тизим фаолиятига доир раҳбарий ва бошқа турдаги қарорларни қабул қилинишида ўзига алоқадор шахсларга имкониятлар яратиб бериши тушунилади.

8. **Лоббизм** – норасмий шахсларнинг ўзаро учрашиб, расмий қарорлар қабул қилишдаги сиёсий таъсир ўтказилишидаги устунлик. Коррупциянинг ушбу тури ўзининг салбий таъсирини нафақат бир тизим доирасида, балки сиёсий-иқтисодий кенг миқёсда кўрсатганлиги сабабли ижтимоий хавфлилиги юқори ҳисобланади.

9. **Протекционизм** – (французча "protectionnisme" ёки лотинча "protectio" – ҳимоя, раҳнамолик қилиш) – мансабдор шахсларни хизмат лаёқати билан эмас, таниш-билишчилик, раҳнамолик асосида хизматга қабул қилиниши ёки мансабдор шахснинг ўзига алоқадор шахсларни лавозимга тайинланишига кўмаклашиши ҳисобланади.

Протекционизм ва унинг кўринишларининг (қариндош-уруғчилик, тарафкашлик, патронаж) энг катта хавфи шундаки, у нафақат хўжалик соҳасига, балки қонунчилик қабул қилинишидан тортиб, кадрлар сиёсатига ҳам ўз салбий таъсирини ўтказиши мумкин.

10. **Клиентилизм** – лавозимдаги мансабдор шахс ва унга ҳайриҳоҳ бўлган шахсларга раҳнамолик қилиши, у ёки бу соҳада уларнинг манфаатларини кўзлаб фаолият юритиш тушунилади.

11. **Манфаатлар тўқнашуви** – коррупциянинг энг кенг тарқалган ва бошқа турларни содир этилишида юзага келадиган шакли. Шахсий (бевосита ёки билвосита) манфаатдорлик шахснинг мансаб ёки хизмат мажбуриятларини лозим даражада бажаришига таъсир кўрсатаётган ёхуд таъсир кўрсатиши мумкин бўлган ҳамда шахсий манфаатдорлик билан фуқаролар, ташкилотлар, жамият ёки давлатнинг ҳуқуқлари ва қонуний манфаатлари ўртасида қарама-қаршилик юзага келаётган ёки юзага келиши мумкин бўлган вазият.

12. **Рақамли коррупция** – онлайн ёки рақамли платформалар ва воситалардан шахсий манфаатларини кўзлаб ноқонуний фойдаланиш ёки уларни яратиш, масалан, таълим соҳасида имтихон ва синов олиш жараёнларида ёки мавжуд бўлмаган олий таълим муассасасига оид маълумотларни тақдим этишдаги фирибгарлик ҳисобланади.

б) божхона органларида кенг тарқалган коррупция турлари

Ўзбекистон Республикаси Вазирлар Маҳкамасининг 2020 йил 31 декабрдаги 829-сон қарори билан коррупцияга оид жиноятлар таснифи белгилаб

берилиши натижасида содир этилган хатти-ҳаракатларнинг коррупциявий ёки бунга алоқадор эмаслигини таснифлаш бир мунча соддалашди.

Шунга кўра, биргина 2023 йилда республика бўйича судлар томонидан жами 6 535 нафар шахс (2022 йилда 7 414 нафар шахс) коррупцияга оид жиноятлар учун жиноий жавобгарликка тортилди. Ушбу шахслар томонидан давлат манфаатларига жами 1,4 трлн (2022 йилда 2,04 трлн) сўм миқдорида зарар етказилган.

Шунингдек, жиноий жавобгарликка тортилган шахсларнинг 12 нафари (27) республика, 319 нафари (270) вилоят, 5024 нафари (5755) туман-шаҳар миқёсидаги давлат ташкилотларида фаолият кўрсатган ходимлар бўлган. Ушбу шахслардан 566 нафари муқаддам айнан коррупциявий жиноят учун судланган бўлсада, яна мансабдорлик лавозимларига хизмат қабул қилиниб, коррупциявий жиноятни қайта содир қилган[6].

Айнан миллий маъруза маълумотларига эътибор қаратадиган бўлсак, унда Ўзбекистон Республикаси Давлат хавфсизлик хизмати идоралари томонидан 2023 йилда ҳуқуқни муҳофаза қилувчи органлар билан ҳамкорликда 1 290 та пора олиш вақтида жиноят устида қўлга олиш бўйича фаол тадбир ўтказилганлиги, ушбу тадбирларнинг 95 таси божхона қонунчилигини бузиш соҳаларига тўғри келишини кўришимиз мумкин.

Бундан хулоса қилиш мумкинки, божхона органлари фаолияти соҳада амалга оширилаётган ислоҳотларга қарамасдан доимий коррупция жиноятларни содир этилиши учун имконият мавжуд бўлган тизимлигича қолмоқда.

Таъкидлаш жоизки, божхона органларида юзага келадиган коррупция содир этилиш механизмлари ва мотиви билан коррупциянинг бошқа турларидан фарқ қилади. Шу сабабли, халқаро тадқиқотчилар томонидан “божхона органларидаги коррупция” тушунчасини амалиётга киритиш ва уни ўрганишнинг алоҳида методикаларини ишлаб чиқилишини илгари суришади.

Хусусан, Жахон божхона ташкилоти мутахассислари божхона органларидаги коррупция тушунчаси остида божхона органлари мансабдор шахслари томонидан ўз ваколатларини шахсий манфаатларини кўзлаб суиистеъмол қилишлари деб ҳисоблашади [5].

Иқтисодий хавфсизликнинг асосий ҳимоячиларидан бири бўлган божхона органларида коррупцияга қарши кескин кураш 2022 йил 17 февралдан бошланган бўлиб, тизимда коррупцияни олдини олиш, тезкорлик билан аниқлаш ва бартараф этишнинг узлуксиз модели нафақат тезкор-қидирув ва таҳлил усуллари орқали балки сунъий интеллектга асосланган дастурий таъминотлар билан ҳам амалга оширилмоқда.

Шу ўринда, божхона органларида учрайдиган коррупциянинг турларига аҳамият берсак. Таҳлиллар натижасида божхона органлари тўғридан-тўғри пора олиш йўли билан содир этиладиган порахўрликдан ташқари божхона ходимлари мансаб ваколатини суиистеъмол қилиш; мансабга совуққонлик билан қараш; ҳокимият ҳаракатсизлиги ва кронизм, фаворитизм, непотизм, уруғ-аймоқчилик каби унинг турлари учраши аниқланган.

Маълумки, Ўзбекистон Республикаси Жиноят кодексига кўра:

- мансаб ваколатини суиистеъмол қилиш 205-модда билан таъқиб қилиниб, беш йилгача озодликдан маҳрум қилиш билан;

[6] Ўзбекистон Республикасида коррупцияга қарши курашиш тўғрисида миллий маъруза | Anticorruption.uz

- мансабга совуққонлик билан қараш 207-модда билан таъқиб қилиниб, беш йилгача озодликдан маҳрум қилиш билан;

- ҳокимият ҳаракатсизлиги 208-модда билан таъқиб қилиниб, уч йилгача озодликдан маҳрум қилиш билан жазоланиш мумкин.

Божхона қўмитаси маълумотларига кўра, 2013-2023 йиллар давомида Жиноят кодексининг 205-моддаси билан 2 та ҳолатда 2 нафар, 206-моддаси билан 4 та холатда 6 нафар ва 207-моддаси билан 3 та холатда 8 нафар ходим жиноий жавобгарликка тортилган.

Эътиборлиси шундаки, божхона органларида кенг тарқалган кронизм, фаворитизм, непотизм, уруғ-аймоқчилик каби коррупциянинг турлари учун Жиноят кодексида тўғридан-тўғри санкциялар йўқ бўлсада, улар Жиноят кодексининг 205-209-моддаларида кўрсатилган ҳатти-ҳаракатларни юзага келтирувчи манбалар ҳисобланади.

Хусусан, божхона постида хизмат олиб бораётган ходим ўз таниш-билишларига божхона чегараси орқали божсиз олиб ўтиш меъёрларидан ортиқча миқдордаги товарларни олиб ўтишлари учун имкон яратиб бериб, кронизмга йўл қўйса, бунинг учун моддий манфаатдор бўлмаган тақдирда ҳам кўп миқдордаги товар моддий бойликларини мамлакат ҳудудига бож тўловларини тўланмасдан олиб ўтилишига, бу орқали давлат бюджетига тушиши мумкин бўлган тўловларнинг таъминланмаслигига сабабчи бўлади. Айнан ушбу хатти-ҳаракат учун жавобгарлик муқаррар.

Алоҳида таъкидлаш жоизки, раҳбарнинг қўл остидаги ходимларга ўрнак бўлиш ўрнига, уларни коррупциявий жиноятларга тортиши ҳолатларини божхона постларида коррупцияни келтириб чиқарувчи асосий сабаб сифатида кўрсатиш мумкин.

Бу каби салбий ҳолатлар нафақат божхона органларига бўлган фуқароларнинг ишончини камайишига олиб келади, балки хизмат қилаётган ёш ходимларнинг онгига салбий таъсир ўтказади.

Сўнгги йилларда божхона органларида коррупцияга қарши курашиш борасида кўплаб халқаро тажрибаларга асосланган ҳолда янги методикалар жорий қилинди. Шулардан энг самарадорлиги юқориси коррупцияга қарши курашишда ёрдам берган ва бундай салбий иллатлардан ўзини тийган ходимларни рағбатлантиришнинг ҳуқуқий асоси яратилганлиги бўлди деб айтиш мумкин.

ХУЛОСА

Жиноятга қарши курашиш содир этилаётган хатти-ҳаракатнинг жиноят эканлигини жамият аъзорлари томонидан тўлиқ англаб етилгандагина самардорликка эришади. Коррупция ҳам мураккаб феномен сифатида қайси хатти-ҳаракатлар учун айнан ушбу жиноят сифатида баҳоланишини тушуниб етишни талаб этади.

Янги Ўзбекистонни барпо этишда амалга оширилаётган ислоҳотлар коррупция жиноятини содир этаётган ва ўз манфаатларини давлат манфаатларидан устун кўрадиган шахслар томонидан давлат мулкини талон-тарож этиш йўли билан самарасизликка учраши, аҳолида давлат органлари ва идораларига нисбатан ишончсизликнинг ортиб кетишига олиб келиши мумкин. Бу каби холатларни юзага келмаслигида барча ваколатли органлар қаторида божхона органларида ҳам бирдек масъул.

Божхона органларини коррупциясиз соҳага айлантириш борасида Ўзбекистон Республикаси Президенти Ш.М.Мирзиёев томонидан илгари сурилган ғоя асосида тизимни “ҳалоллик вакцинаси” билан эмаланмаган ходимлардан тозалаш ҳамда адолат тамойили асосида хизмат олиб борилишини таъминлашга қаратилган кескин кураш натижадорлигини

ошириш билан божхона органларининг давлат ва жамият олдидаги имижини ошириш мумкин бўлади.

Бунда асосий этиборни барча поғонадаги ходимларни коррупция ва унинг салбий оқибатлари, унинг турлари ва содир этилиш усуллари ҳақида доимий хабардор қилиб бориш муҳим профилактик чоралардан бири ҳисобланади.

ЎЗБЕКИСТОН РЕСПУБЛИКАСИДА БОЖХОНА МЕНЕЖМЕНТИНИ ЮРИТИЛИШ ҲОЛАТИ ВА УНГА ТАЪСИР ЭТУВЧИ ОМИЛЛАР

Мирзахмедова Дилафруз Фархатовна
Ўзбекистон Республикаси Иқтисодиёт ва молия вазирлиги ҳузуридаги Божхона қўмитасининг Тошкент шаҳар бўйича бошқармаси ходими
https://doi.org/10.5281/zenodo.14736117

Аннотация. *Божхона менежментини жорий этилиши божхона органларининг бошқарув фаолиятини халқаро илғор тажрибалар асосида тартибга солиш имконини беради. Лекин, божхона менежменти тушунчаси янги ғоялардан бири бўлганлиги сабабли халигача тўлиқ тадқиқ қилинмаган. Унинг заруратини тўлиқ англаб етилиши менежмент асосларига кўра замонавий тамойилларга таянилган ҳолда жорий этилишига замин яратади. Лекин, бир қатор омиллар божхона менежментини жорий этилиши ва тўғри юритилишига салбий таъсир кўрсатиб, божхона органларининг самарадорлигини пасайишига олиб келиши мумкин. Ушбу мақолада божхона менежментини жорий этиш зарурати ва унга таъсир қилувчи омиллар тўғрисида маълумотлар келтирилган.*

Калит сўзлар: *божхона менежменти, божхона органлари, декларант, бизнес учун божхона, бошқарув тизими, иерархия, интелектуал божхона, Исикава методи, омилли таҳлил*

Аннотация. *Внедрение таможенного менеджмента позволяет регулировать управленческую деятельность таможенных органов на основе передового международного опыта. Однако концепция таможенного управления является одной из новых идей и еще не до конца исследована. Полное понимание ее необходимости закладывает основу для ее внедрения на основе современных принципов управления. Однако ряд факторов может оказать негативное влияние на внедрение и правильное администрирование таможенного управления и привести к снижению эффективности работы таможенных органов. В данной статье представлена информация о необходимости внедрения таможенного управления и факторах, влияющих на него.*

Ключевые слова: *таможенный менеджмент, таможенные органы, декларант, таможня для бизнеса, система управления, иерархия, интеллектуальные обычаи, метод Исикавы, факторный анализ.*

Abstract. *The implementation of customs management allows regulating the management activities of customs authorities based on advanced international experience. However, the concept of customs management is one of the new ideas and has not yet been fully explored. A full understanding of its need lays the foundation for its implementation based on modern management principles. However, a number of factors can have a negative impact on the implementation and proper administration of customs management and lead to a decrease in the efficiency of customs authorities. This article provides information on the need to implement customs management and the factors affecting it.*

Keywords: *customs management, customs authorities, declarant, customs for business, management system, hierarchy, intellectual customs, Ishikawa method, factor analysis.*

КИРИШ

Иқтисодиётни жадал ривожлантириш жараёнлари бевосита божхона органлари фаолияти билан боғлиқ бўлиб, глобаллашув шароитида товар ва транспорт воситаларининг божхона расмийлаштирувидан ўтказилиши учун сарфланган ҳар бир дақиқа тадбиркорлик субъектлари учун қадрли ҳисобланади. Божхона иши ҳуқуқий ва иқтисодий жараён бўлиб, ташқи иқтисодий фаолиятнинг ажралмас қисми ҳисобланади. Шу сабабли, давлатнинг иқтисодий хавфсизлигини таъминлашнинг асосий воситаларидан бири бўлган божхона органлари фаолиятининг доимий такомиллаштириб борилиши долзарб масала.

Божхона тартиботлари тадбиркорлик субъектларининг ташқи иқтисодий фаолиятни амалга ошириш жараёнларидаги йўқотишларини минималлаштириши мумкин бўлган орган ҳисобланади. Товарларни божхона расмийлаштируви жараёнларидаги ҳар қандай тўсиқлар нафақат тадбиркорлик субъекти учун бозор қонуниятлари асосида йўқотилган вақт тўловини балки амалда давлатга ундириладиган божлар миқдорини ҳам ортишига олиб келиши мумкин [1].

Ушбу мақолада божхона органларида менежментни қўллаш асослари ва унга таъсир этувчи асосий омиллар ёритилган бўлиб, соҳа самарадорлигини оширишда ушбу сабаб ва омилларни инобатга олиш бўйича таклиф ва тавсиялар ишлаб чиқилган.

ТАҲЛИЛ ВА НАТИЖАЛАР

а) божхона менежменти ва уни божхона органлари фаолиятида жорий этишнинг аҳамияти

Божхона органлари фаолиятида божхона менежментини тўғри ташкил этилишини аниқ тушуниб етиш учун товарларнинг ҳаракатланиш занжирини 1-расмдаги каби моделлаштириш мақсадга мувофиқ деб ҳисобланади.

Божхона органлари фаолияти бир қатор давлат ва хусусий сектор субъектлари билан узвий боғлиқ бўлиб, улар томонидан кўрсатиладиган хизматлар тадбиркорлик субъектларининг товар ва транспорт воситаларини божхона назорати ва расмийлаштирувидан ўтказишлари учун аҳамиятли ҳисобланади.

1-расм. Ташқи савдо юкларининг ҳаракатланиш занжири[7]

[7] Муаллиф ишланмаси

Ваҳоланки, божхона органларида сўнгги йилларда амалга оширилган ислоҳотлар натижасида яратилган тадбиркорларнинг шахсий кабинетлари орқали товар ва транспорт воситаларини божхона расмийлаштирувидан ўтказиш учун маълумотларни божхона органларига тақдим этишга тўлиқ имкониятлар
мавжуд бўлса-да, хусусий сектор сифатида қаралаётган божхона брокерлари ва божхона расмийлаштируви мутахассислари хизматидан фойдаланиш ҳажми йилдан-йилга ортиб бормоқда.

Бунга қуйидаги сабабларни асос қилиб келтириш мумкин:

- тадбиркорларнинг божхона қонунчилиги билан таниш эмаслиги ёки танишмаганликлари;

- товарларни божхона расмийлаштирувидан ўтказилишида қўлланиладиган ахборот тизимларидан фойдаланиш бўйича тадбиркорлик субъектларида етарлича малаканинг етишмаслиги ёки мавжуд эмаслиги ва бошқалар.

Эътиборлиси шундаки, божхона органлари фаолияти фақатгина товарларни божхона назорати ва расмийлаштирувидан ўтказиш жараёнларидаги иқтисодий-ҳуқуқий вазифаларни амалга оширишдан иборат бўлсада, товарларни божхона расмийлаштирувидан ўтказилиши вақтида кўрсатилган хизматлар сифатини баҳолашда фаолиятида бўйича божхона органлари билан ҳамкор бўлган сертификатловчи ва рухсат берувчи бошқа органлар ва хизмат кўрсатувчи хусусий секторларнинг фаолияти ҳам инобатга олинади. Яъни, божхона органлари қанчалик сифатли ва тез хизмат кўрсатмасин, божхона брокерлари томонидан йўл қўйилган камчиликлар ҳам тизимга нисбатан салбий қарашларни юзага келтирувчи омиллардан ҳисобланади.

Хорижий давлатлар тажрибасига эътибор қаратилса, АҚШ, Европа давлатлари каби ғарб минтақасида юқоридаги факторларни инобатга олган ҳолда божхона органлари фаолиятини бошқариш жараёнлари сифатида ташқи иқтисодий фаолият қатнашчиси ва божхона органлари ўртасидаги муносабатларни бошқариш тушунилишини кўриш мумкин. Шунингдек, МДҲ ва Осиё давлатларининг аксариятида божхона органлари фаолиятини бошқариш айнан божхона тузилмаларида хизмат олиб бориш билан боғлиқ жараёнларни бошқаришни англатиши бўйича хулоса қилиш мумкин бўлади. Шунингдек, ғарб давлатлари тажрибасидаги тадбиркорлик субъектларининг товарларни импорти ёки экспортидаги дастлабки босқичдан эркин муомалага чиқаришгача бўлган барча тартиботларни бошқариш айрим манбаларда логистика менежменти сифатида қаралади [2] ҳамда товарларнинг божхона назоратидан ўтказилиши билан боғлиқ жараёнлар унинг тизим ости элементларидан бири ҳисобланади.

Шу ўринда, рақамлаштириш жараёнлари жадал ривожланиб бораётган ҳозирги даврда Жаҳон божхона ташкилоти томонидан ривожланган давлатларнинг илғор тажрибалари асосида шакллантирилган тавсиялар “Бизнес учун божхона” тамойили асосида божхона органлари фаолиятини бошқариш тадбиркорлик субъектлари учун қулай ва сифатли божхона хизматларини кўрсатишни англатувчи божхона менежменти моделини яратишни англатади.

Бугунги кунда, Ўзбекистон Республикасида амалда бўлган божхона органлари фаолиятидаги бошқарув жараёнларига қуйидаги хусусиятлар тааллуқли:

- божхона органлари фаолиятининг самарадорлиги учун қарорларни қабул қилиш тизими марказлаштирилган ҳолда жорий этилган;

- божхона органларида қарорларни қабул қилиш жараёнлари динамик ўзгарувчан бўлиб, божхона соҳасига оид ўзгаришлар жорий қилингунга қадар бошқарув жараёнлари такомиллашган бўлиши лозим. Шу сабабли, халқаро жараёнлар ва давлат ҳудудидаги барча ривожланаётган тенденцияларга мос равишда божхона органларининг бошқарув соҳаси мослашувчан ҳаракатда бўлиши талаб этилади;

- божхона органларида бошқарув фаолиятини амалга оширувчи инсон ресурсларини ривожлантириш ва бошқариш тизими шаффоф жорий этилмаган.

Шунингдек, миллий божхона тизимида божхона менежментини амалга оширишда бир қатор усулларнинг спектри қўлланилади. Уларга вазиятли ёндашув, тизимли, жараён ва когнитив ёндашувларни мисол келтириш мумкин.

Жумладан, умумий методлар божхона хизматининг стратегик ва ривожланиш жараёнлари билан боғлиқ вазифаларни амалга ошириш, маҳаллий методлар эса вазиятни оператив бошқариш учун қўлланилади.

Шунингдек, ташкилий-тузилмавий ва ҳуқуқий методлар ҳисобланувчи тўғридан-тўғри усуллар давлат бошқаруви билан боғлиқ жараёнларда қўлланилади. Билвосита усулларга ижтимоий-психологик, иқтисодий ва иқтисодий-математик методларни мисол келтириш мумкин.

б) божхона менежментига таъсир этувчи омиллар таҳлили

Божхона органларида бошқарув аппарати томонидан қабул қилинган қарорларни ижро этилиш иерархияси қуйидаги 2-расмда келтирилган бўлиб, унинг фаолияти меҳнат, фуқаролик ва ички қонун ҳужжатлари билан тартибга солинади. Бошқарув фаолиятида юзага келган камчиликлар иқтисодий ва сиёсий хавфсизликка салбий таъсир келтириб чиқаради.

2-расм. Божхона қўмитасида бошқарув тизимининг иерархияси[8]

Божхона органлари фаолияти ҳукумат билан бошқа давлат органлари ўртасидаги бўлгани каби расмий ва норасмий қонун-қоидалар асосида шаклланадиган муносабатларга кўра тартибга солинади. Божхона менежментини иқтисодий-ижтимоий объектлар соҳасига кирувчи бошқарув муаммоларини тадқиқ қилиш, алоҳида хусусиятга эга ташкилот устидан бошқарув тушунчаси сифатида қабул қилиш орқали унга таъсир кўрсатувчи омилларни аниқлаш мумкин бўлади[3].

2022 йил февраль ойидан бошлаб коррупциядан ҳоли тизимга айлантириш мақсадида амалга оширилган ислоҳотлар натижасида божхона тизими тубдан такомиллаштирилди. Божхона органлари фаолиятида амалга оширилган ўзгаришларни хронологик таҳлил қиладиган бўлсак уни 2005 йилгача қўл меҳнатига асосланган божхонадан 2018 йилгача бўлган даврда ярим қоғоз ва ярим автоматлаштирилган хизматга,

[8] Муаллиф ишланмаси

2022 йилгача интерактив хизматлар кўрсатувчи тўлиқ электронлаштирилган тизимга айлантирилганини кўришимиз мумкин. Ҳозирда рақамлаштирилаётган иқтисодий хавфсизликни таъминловчи ҳуқуқни муҳофаза қилувчи божхона органларининг кейинги босқичи **интеллектуал хизмат**га айланиш ҳисобланади. Амалга оширилган барча ислоҳотлардан кўзланган мақсад ташқи иқтисодий фаолият қатнашчилари томонидан божхона тартиботлари учун сарфланаётган вақт сарфини минималлаштириш, божхона органлари бошқарув фаолияти самарадорлигини ошириш ҳисобланади.

Интеллектуал божхона бу сунъий интеллектга асосланган энг сўнгги ахборот-коммуникация технологиялари билан жиҳозланган, товарларнинг келиб чиқишини тасдиқлаш ва сертификатлаштиришнинг халқаро тизимларини қабул қилувчи, рақамли транзит тизимига эга, ўтказиш пунктлари ва хавфни бошқариш тизимининг энг илғор технологиялар асосида такомиллашган шаклига асосланган, бизнесменлар учун узлуксиз интерактив хизмат кўрсатувчи, маъмурий ва божхона қонун бузилиши ҳолатларга қарши курашишнинг юқори натижадорлиги қайд этилувчи божхона органлари шакли ҳисобланади.

Сўнгги йилларда миллий божхона тизимида жорий этилаётган божхона органлари фаолиятини рақамлаштириш шароитида бошқарув жараёнларини ҳам рақамлаштириш асосий муаммоли ҳолатлардан бири ҳисобланади. Сабаби, рақамли маълумотлар билан ишлаш жараёнлари ҳамда қарорларни қабул қилиш тизимидаги ўзгаришлар бошқарув қарорларини қабул қилишни ҳам рақамлаштириш заруратини юзага келтиради. Қарорларни қабул қилиш фаолияти ахборот-технологияларидан кенг фойдаланиш орқали амалга оширилиши субъективликни олдини олади, табиийки божхона органлари фаолиятини ахборотларсиз тасаввур қилиб бўлмайди.

Маълумки, соҳаларга оид муаммоларни келтириб чиқарувчи омилларни таҳлил қилишда турли усуллардан фойдаланиш мумкин. Шулардан бирига эксперт баҳолари мисол бўла олади. Тадқиқот давомида божхона органларида хизмат олиб бораётган 10 та турли йўналиш бўйича етук мутахассислар, Божхона қўмитаси ижрочи раҳбарияти вакиллари, Божхона институти профессор-ўқитувчилари ва Брокерлар ассоциациясидан иборат жамоанинг фикрлари аноним тарзда “Дельфи” методи ёрдамида таҳлил қилиниб, олинган натижалар йўналишларга бўлинган ҳолда Исикава методи ёрдамида қайта ишланди. Ушбу метод “балиқ скелети” ҳам деб номланади ва унда муаммони келтириб чиқарувчи омилларни гуруҳларга бўлган ҳолда таҳлил қилинади.

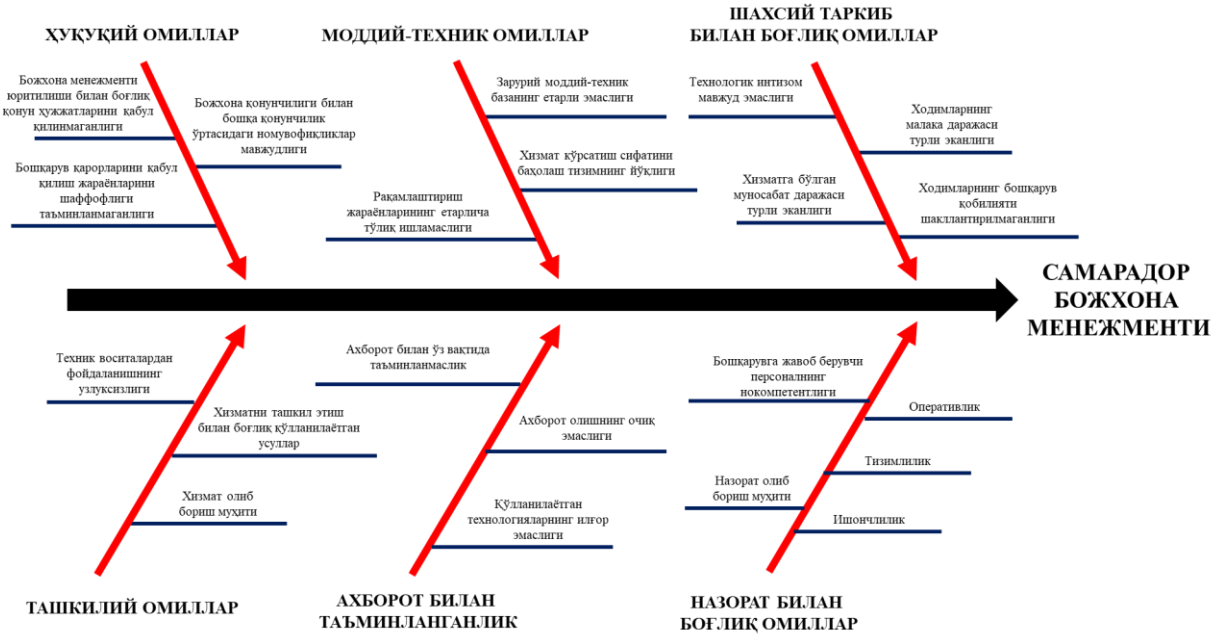
Божхона органларида самарадор божхона менежментини юритишга таъсир этаётган салбий омилларни Исикава методи ёрдамида таҳлил қилинганда қуйидагилар аниқланди (3-расмга қаранг):

1. Ҳуқуқий омиллар:

- **Божхона менежменти юритилиши билан боғлиқ қонун ҳужжатларини қабул қилинмаганлиги** – божхона органлари фаолиятида қўлланилаётган қонун ҳужжатлари картотекаси асосида ўтказилган контент таҳлил натижасида “божхона менежменти” сўзи фақатгина шундай номланувчи ўқув курсларини ташкиллаштиришда қўлланилганлиги ва уни бошқарув билан боғлиқ жараён сифатида ҳеч қаерда қайд этилмаганлиги аниқланди;

- **Божхона қонунчилиги билан бошқа қонунчилик ўртасидаги номувофиқликлар мавжудлиги** – божхона органларида бошқарув фаолиятини тартибга солувчи ҳужжатларга зид бир қатор қарор ва фармонлар мавжуд;

- **Бошқарув қарорларини қабул қилиш жараёнларини шаффофлиги таъминланмаганлиги** – божхона ишини бошқариш жараёнларида қабул қилинадиган қарорлар автоматлаштирилмаган ва шаффофлиги таъминланмаган.



3-расм. Божхона менежменти самарадорлигига салбий таъсир этувчи омилларнинг Исикава методида таҳлили[9]

2. Моддий-техник омиллар:

- **Рақамлаштириш жараёнларининг етарлича тўлиқ ишламаслиги** – божхона ишини тартибга солиш мақсадида 60 дан ортиқ ахборот тизимлари ва 30 дан ортиқ интерактив тизимлар ишга туширилган бўлсада, уларнинг самарадорлик даражаси паст эканлигини кўришимиз мумкин;

- **Зарурий моддий-техник базанинг етарли эмаслиги** – бошқарув жараёнлари билан боғлиқ бўлган моддий-техник база тўлиқ шакллантирилмаган;

- **Хизмат кўрсатиш сифатини баҳолаш тизимнинг йўқлиги** – божхона органлари томонидан тадбиркорларга кўрсатилаётган хизматларни баҳолаш, камчиликларни аниқлаш ва қайта текшириш тизими яратилмаган.

3. Шахсий таркиб билан боғлиқ омиллар:

- **Технологик интизом мавжуд эмаслиги** – жараёнлар рақамлаштирилган бўлсада, рақамли технологиялар билан ишлашда ходимларнинг технологик интизоми тартибга солинмаган;

- **Ходимларнинг малака даражаси турли эканлиги** – айни бир вазифани бажаришда бир хил компетенцияга эга бўлмаган ходимлардан иборат тузилма ва бўлимларда иш ҳажми тақсимоти турлича бўлишини кузатиш мумкин;

- **Хизматга бўлган муносабат даражаси турли эканлиги** – хизматга қабул қилиш жараёнлари тўлиқ шаффоф эмаслиги натижасида ҳалигача қариндош-уруғчилик ва таниш-билишлар орқали хизматга “номақбул” номзодларни қабул қилиниши, улар томонидан кўрсатиладиган божхона хизматларининг сифати паст бўлишига олиб келмоқда;

[9] Муаллиф ишланмаси

- **Ходимларнинг бошқарув қобилияти шакллантирилмаганлиги** – бошқарув кадрларини тайёрлаш жараёнлари етарлича йўлга қўйилмаган.

4. Ташкилий омиллар:

- **Техник воситалардан фойдаланишнинг узлуксизлиги** – божхона постларида мавжуд техник воситаларнинг захираси мавжуд эмас, ходимлар смена тартибида алмашгани билан техник воситаларда бу имконият мавжудмаслиги уларнинг тезда ишдан чиқишига хизмат кўрсатиш тизимини бузилишига олиб келади;

- **Хизматни ташкил этиш билан боғлиқ қўлланилаётган усуллар** – хизматни ташкил этишда ходимларнинг тақсимоти билан боғлиқ шаффофликни таъминланмаганлиги, қўлланилаётган усуллар етарлича самара бермаслигига олиб келмоқда;

- **Хизмат олиб бориш муҳити** – божхона органларида хизмат олиб бориш билан боғлиқ муаммоларнинг сақланиб қолинаётганлиги “ақлларнинг чиқиб кетиши” эффектига олиб келмоқда.

5. Ахборот билан таъминланганлик:

- **ахборот билан ўз вақтида таъминламаслик** – бошқарув жараёнларида барча объектлар ва соҳалар тўғрисида ўз вақтида маълумотга эга бўлмаслик бошқарув қарорларини қабул қилиш жараёнларига салбий таъсир ўтказади;

- **ахборот олишнинг очиқ эмаслиги** – божхона ишини бошқаришда турли манбалар ва соҳаларга оид маълумотларни олишда очиқлик ва шаффофликни таъминланмаслиги “домино эффекти”ни юзага келтириб, бошқа соҳаларни бошқарилишига ҳам салбий таъсир этади;

- **қўлланилаётган технологияларнинг илғор эмаслиги** – божхона органлари фаолияти рақамлаштирилиб, барча жараёнларни интернет маконига кўчирилиши энг қуйи тизимдан тортиб юқоригача илғор технологиялардан фойдаланишни тақозо этади.

6. Назорат билан боғлиқ омиллар:

- **Бошқарувга жавоб берувчи персоналнинг нокомпетентлиги** – бошқарув кадрларини қайси жиҳатлари асосида ушбу лавозимга тайинланаётганлигининг ҳуқуқий асослари мавжуд эмас;

- **Назорат олиб бориш муҳити** – божхона органлари фаолиятини назорат қилиш тизими ташкилий-ҳуқуқий жиҳатдан етарлича шакллантирилмаган;

- **оперативлик** – бошқарув қарорларини тезкор қарор қабул қилиш имконияти мавжуд эмас;

- **тизимлилик** – қайталанувчи назорат функцияларининг кўплиги сабабли божхона органлари фаолиятини назорат қилиш жараёнлари тизимлаштирилмаган;

- **ишончлилик** – божхона органлари фаолиятини назорат қилиш натижаларининг ишончлилиги кафолатлари мавжуд эмас.

Мазкур юқоридаги омиллар экспертлар фикр ва мулоҳазалари асосида шакллантирилган бўлиб, самарадор божхона менежментини юритилишига таъсир этувчи салбий омиллар ҳисобланади. Келгусида божхона менежменти юритилишини ислоҳ қилишда ушбу омилларни инобатга олиш асосида чора-тадбирларни белгиланиши куч ва воситалардан самарали фойдаланишни таъминлайди.

ХУЛОСА

Хулоса қилиб айтганда, кундан-кунга илғор технологиялар ва инновацияларни жалб қилиш орқали такомиллаштирилиб борилаётган божхона органларида “интеллектуал” хизмат кўрсатилишини таъминлаш бошқарув жараёнлари билан боғлиқ бўлиб, бунга малакали мутахассислар ва экспертларнинг қарашлари асосида аниқланиб, Исикава методи ёрдамида шакллантирилган, божхона органларининг хизмат кўрсатиш жараёнларига салбий таъсир этувчи омилларни бартараф этмасдан эришиб бўлмайди.

Шу сабабли, божхона органларини такомиллаштириш билан боғлиқ қарорларни қабул қилиш жараёнларида бошқарув кадрларини тайёрлаш ва божхона менежментини тўғри юритилиши имконини берувчи бандларни киритиш мақсадга мувофиқ деб ҳисобланади.

SCIENCE AND TECHNOLOGY PARKS TO ENHANCE THE PERFORMANCE OF INDUSTRY

Karimov Khojakbar
Independent researcher, Tashkent State University of Economics
https://doi.org/10.5281/zenodo.14736022

Science and technology parks serve as critical ecosystems that facilitate the transfer of technology, foster collaboration between academia and industry, and stimulate industrial growth. New Uzbekistan has made significant steps for the industrial development over the past years, which bring to the status of one of the fastest-growing economies in Central Asia. The industrial sector contributed approximately 33% to the national GDP in 2023 [1], with a gradual increase in industries like textiles, automotive, and chemicals. Particularly, the textile industry accounted for 2 billion USD in exports, driven by government initiatives to decrease raw cotton exports and promote value added finished goods manufacturing. In the automobile industry, under the wise policy of the President Sh. Mirziyoyev the BYD Uzbekistan plant in Jizzakh was established which is BYD's first Factory outside of China. In its first phase, the investment of $160 million and created 1,200 jobs. In this factory process starts from welding and painting to final assembly. In short-term period production capacity is going to be increased 500 thousand cars per year [2]. Furthermore, after the acceptance of "Localization Program" for domestic production of automotive components, dependency of imports reduced by 25% over the last five years [3].

Uzbekistan is on the way of being a member of the World Trade Organization (WTO) which marks a pivotal moment for its industrial policy. Joining the WTO will expose the country's industries to global competition, requiring higher standards in production, innovation, and sustainability. Without increased focus on R&D and innovation, industries risk falling behind in the competitive international market. This highlights the urgency of creating policies and mechanisms to foster innovation and improve industrial resilience.

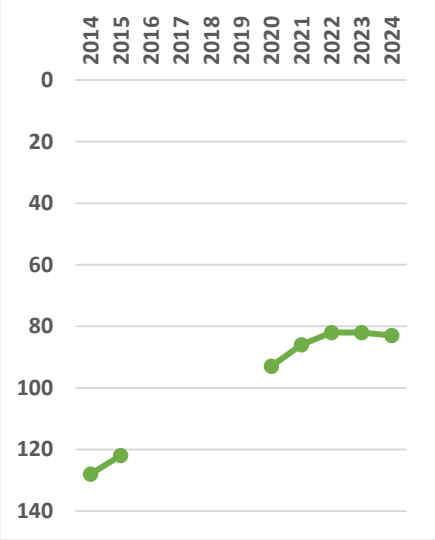
In this context, science and technology parks (STPs) serve as crucial enablers of industrial innovation. These parks provide a platform for collaboration between academia, industry, and government, facilitating the commercialization of research and the adoption of cutting-edge technologies. However, the effectiveness of STPs depends heavily on robust management mechanisms. Establishing clear governance structures, streamlining funding allocation, and encouraging public-private partnerships are essential to maximize their impact. Thus, enhancing the management mechanisms of STPs is critical to ensuring that they fulfill their potential as drivers of industrial growth and innovation.

There has been made enormous steps for the improvement of innovative ecosystem during the recent years in new Uzbekistan. Particularly two laws "On science and scientific activity" and "On innovative activity" [4] were approved which states regulation in innovative ecosystem. The first time in the history of the country terms of innovative infrastructures, venture funds, startups etc. were introduced which resulted in establishing facilities for talented young innovators and scientists. As a result of these efforts, Uzbekistan has seen significant advancements in its innovative capacity, positioning itself as a growing hub for innovation in the region. The country's progress in creating a more inclusive and supportive environment for research and innovation is

evident in the increased activity of startups, the establishment of venture capital funds, and the overall dynamism of its scientific community.

As a result, Uzbekistan has made impressive strides in fostering innovation, and the Global Innovation Index (GII) which is announced annually can be a great example of this progress (graph 1). In 2014, Uzbekistan ranked 128th among 133 countries in the Global Innovation Index, reflecting the challenges it faced in fostering innovation at the time. From 2016 to 2019, the country temporarily dropped out of the rankings due to insufficient data and lack of information sharing. However, significant reforms in the innovation sphere have driven notable progress in recent years. As a result, Uzbekistan has climbed to the 83rd position, marking a substantial improvement. This progress positions the country as a leader in innovation within its region, proving the effectiveness of its policy changes and strategic investments in the innovation ecosystem [5].

To ensure further development, Uzbekistan must focus on expanding and strengthening innovative infrastructures such as science and technology parks, business incubators, and startup accelerators. According to the Strategy of Innovative Development of Uzbekistan for 2022-2026, approved by a Presidential Resolution, the country currently has 55 innovative infrastructures, with plans to increase this number to 75 by 2026. [6] While Uzbekistan has gained valuable experience in constructing such facilities, challenges remain in their effective management. Many of these infrastructures are underperforming due to weak management mechanisms, leading to poor integration between science, education, and production. Addressing these gaps will be crucial for fully realizing the potential of these facilities and ensuring they contribute meaningfully to the country's innovation-driven growth.



Graph 1. Uzbekistan ranking in GII for the last 10 years. Source: WIPO report

Based on international experience, various management models for innovative infrastructures such as technoparks, each tailored to the specific needs and conditions of their regions. The most common models include University Science Parks, Independent Organizations, Corporate Parks, Network Parks, Governmental Parks, and Public-Private Partnership (PPP) Parks. [7].

In Uzbekistan according to the Law on Innovative Activity, most science and technology parks are currently government or university established. While this has provided a foundation, the current management mechanisms are insufficient to achieve optimal performance, leading to weak integration between science, education, and production. Subsequently to attract more capital from the industry or private enterprises to innovative activity and implement more innovation into the manufacturing it is necessary to involve businesspeople to the management of innovative infrastructure. Thus PPP management model is offering to implement for governing technoparks. This model aligns with the country’s Strategy of Innovative Development for 2022-2026, which emphasizes collaboration and sustainability in innovation. The PPP model leverages the strengths of both public and private sectors, enabling diverse funding opportunities, reducing the burden on government financing, and fostering stronger industry ties. Moreover, it offers flexibility to adapt

to the unique needs of Uzbekistan's innovation ecosystem while ensuring accountability and efficiency.

Public-Private Partnership (PPP) Parks combine government financing with private-sector efficiency, creating a balance between public control and private innovation. This model benefits from diverse funding sources and strong industry partnerships. However, it requires careful alignment of public and private interests to avoid conflicts. Technology Park Malaysia exemplifies this model, leveraging collaboration to drive innovation effectively [8].

By transitioning to the PPP model, Uzbekistan can address its current management challenges and ensure that its science and technology parks function as dynamic hubs of innovation. This approach will not only enhance the integration of science, education, and production but also position Uzbekistan as a leader in innovation within the region, driving sustainable economic growth and technological advancement.

The diagram 1 represents the proposed Public-Private Partnership (PPP) management model for technoparks in Uzbekistan, aimed at fostering innovation, commercialization, and economic growth through effective collaboration among stakeholders. At the top level, the Government acts as the primary enabler, providing the necessary policy frameworks, regulations, and funding to establish and support the innovation ecosystem. Alongside, Universities contribute technoparks with academic expertise and research capabilities, whereas research Institutions provide applied and theoretical research to drive technological advancements. On the other hand private enterprises bring market-oriented insights, investments, and operational expertise, bridging the gap between research and commercialization.

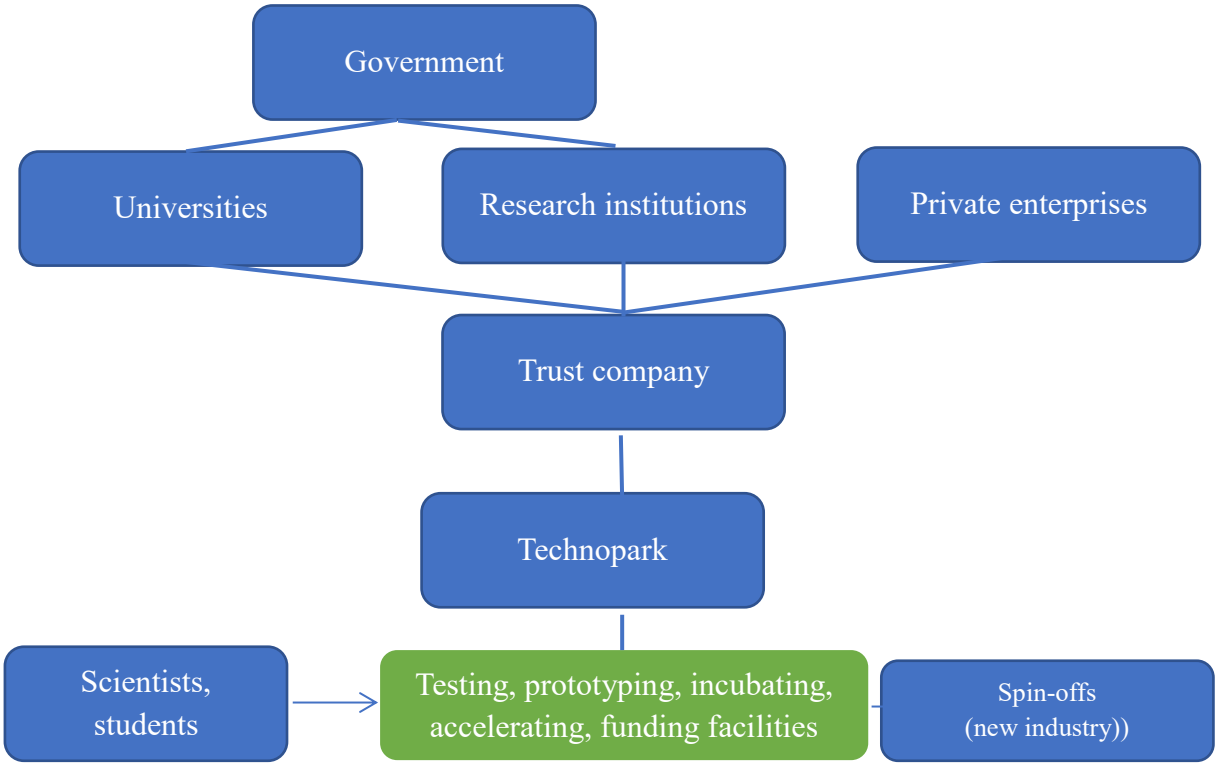


Diagram 1. Proposed Public-Private Partnership (PPP) management model for technoparks in Uzbekistan

Source: Made by the author

The core of this model is the trust company in which the shares are split by half between government and private enterprise, which acts as the coordinating body, ensuring alignment and synergy between these stakeholders. It oversees governance, resource distribution, and project implementation while facilitating cooperation among the government, universities, research institutions, and private enterprises. By centralizing management, the trust company ensures efficient resource allocation, eliminates redundancies, and creates a unified direction for the technopark's activities.

Subsequently, technopark provides essential services such as testing, prototyping, incubating, accelerating, and funding facilities, which are important for developing innovative ideas and guiding them toward commercialization. This stage acts as a catalyst for transferring research and development into production or establishing new industries, offering a platform for scientists, students, and entrepreneurs to refine their ideas and bring them to market readiness. PPP management model enhances performance of technoparks which brings positioning them as key drivers of Uzbekistan's innovation ecosystem, ensuring sustainable economic growth and technological advancement in line with the country's strategic goals.

The findings from this research emphasize the critical role of science and technology parks (STPs) in fostering innovation and industrial growth in Uzbekistan. Despite the significant strides made in establishing innovative infrastructures, challenges in effective management mechanisms persist. These challenges have led to inefficiencies and a lack of integration among science, education, and industry, undermining the potential impact of these infrastructures. The current reliance on government-funded and university-managed technoparks has provided a foundational framework, but it is insufficient to meet the demands of a rapidly evolving global innovation landscape.

To address these challenges, this study proposes transitioning to a Public-Private Partnership (PPP) management model for technoparks. The PPP model leverages the strengths of both public and private sectors, ensuring a balance between government oversight and private-sector efficiency. This approach facilitates diverse funding opportunities, encourages strong industry ties, and allows for more agile and responsive management structures. The proposed model incorporates a trust company as a central coordinating body to streamline governance, align stakeholder interests, and ensure efficient resource allocation. This centralized management structure is vital for enhancing the performance and sustainability of technoparks.

Moreover, the PPP model aligns seamlessly with Uzbekistan's Strategy of Innovative Development for 2022-2026, which emphasizes the importance of collaboration, sustainability, and innovation-driven growth. By adopting this model, Uzbekistan can transform its technoparks into dynamic hubs of innovation, capable of fostering successful startups, supporting research commercialization, and driving the creation of new industries. The focus on testing, prototyping, incubation, and acceleration within the technoparks will provide critical support to scientists, students, and entrepreneurs, ensuring a steady flow of innovative products and services into the market.

In conclusion, transitioning to a PPP-based management model is not only a strategic imperative but also an essential step toward achieving Uzbekistan's long-term innovation and economic development goals. By addressing current management gaps and fostering greater collaboration among stakeholders, this approach has the potential to position Uzbekistan as a regional leader in innovation and industrial competitiveness. The successful implementation of

this model will enhance the integration of science, education, and production, creating a robust and sustainable innovation ecosystem that drives economic growth and technological advancement.

YASHIL IQTISODIYOTGA O‘TISH SHAROITIDA QISHLOQ XO‘JALIGI YERLARIDAN FOYDALANISH TIZIMINI TARTIBGA SOLISHNI TAKOMILLASHTIRISH

Safiyeva Nigora Nurmuxamadovna
Tayanch doktorant, Guliston davlat universiteti
https://doi.org/10.5281/zenodo.14736040

Annotatsiya. *Hozirgi kunda dunyo mamlakatlari jadallik bilan yashil iqtisodiyotga o‘tib bormoqda. Yashil iqtisodiyotga o‘tishning asosiy maqsadlaridan biri bu mavjud resurslarimizni asrab avaylab, atrof muhitga zarar yetkazmagan holda foydalanishni nazarda tutadi. “2019-2030-yillar davrida O‘zbekiston Respublikasining “Yashil” iqtisodiyotga o‘tish strategiyasini tasdiqlash to‘g‘risida”gi O‘zbekiston Respublikasi Prezident qarorining ustuvor vazifalarida organik qishloq xo‘jaligi uslublarini joriy etish,haydaladigan yer maydonlari yuzasining doimiy qoplanib turishini ta’minlash maqsadida ekinlarni takror ekish belgilab olingan[1].Shunday ekan mamlakatdagi qishloq xo‘jaligidagi yerlardan foydalanishni tartibga solish asosiy vazifalarimizdan bo‘lib qolmoqda.Biz ushbu maqolamizda qishloq xo‘jaligida yashil iqtisodiyotga o‘tish sharoitida yer resurslaridan foydalanishni modernizatsiya qilishning zaruriyati va uni joriy qilishning shart-sharoitlari,bu sohadagi ayrim kamchiliklar va ularni bartaraf etish yo‘llai xorij tajribalaridan samarali foydalanish to‘g‘risida fikr yuritdik.*

Kalit so‘zlar: *yashil iqtisodiyot, yer resurslari, moderniztsiya, qishloq xo‘jaligi yerlari, yerdan foydalanish tizimi, xususiy mulkchilik, yer rentasi.*

Аннотация. *В настоящее время страны мира стремительно переходят к зеленой экономике. Одной из основных целей перехода к зеленой экономике является использование имеющихся у нас ресурсов без ущерба для окружающей среды. Приоритетными задачами Указа Президента Республики Узбекистан «Об утверждении стратегии перехода к «зеленой» экономике Республики Узбекистан на 2019-2030 годы» являются внедрение органических методов ведения сельского хозяйства, постоянное покрытие площади пахотных земель с целью обеспечения ее устойчивости определены подсевы сельскохозяйственных культур [1]. Поэтому регулирование использования сельскохозяйственных земель в стране остается одной из наших главных задач. В нашей статье мы обсудили необходимость модернизации использования земельных ресурсов в условиях перехода к зеленой экономике в сельском хозяйстве и условия ее внедрения, некоторые недостатки в этой области и эффективное использование зарубежного опыта путем их устранения.*

Ключевые слова: *зеленая экономика, земельные ресурсы, модернизация, земли сельскохозяйственного назначения, система землепользования, частная собственность, земельная рента.*

Abstract. *Currently, the countries of the world are rapidly moving to a green economy. One of the main goals of the transition to a green economy is to use our existing resources without harming the environment. The priority tasks of the Presidential Decree of the Republic of Uzbekistan "On approval of the strategy of the transition to the "Green" economy of the Republic of Uzbekistan in the period of 2019-2030" include the introduction of organic agricultural methods, permanent covering of the surface of arable land. in order to ensure its stability,*

replanting of crops has been determined [1]. Therefore, regulation of agricultural land use in the country remains one of our main tasks. In our article, we discussed the need to modernize the use of land resources in the context of the transition to a green economy in agriculture and the conditions for its introduction, some shortcomings in this area and the effective use of foreign experiences by eliminating them.

Keywords: *green economy, land resources, modernization, agricultural land, land use system, private ownership, land rent.*

O‘zbekistonning 2030 yilgacha mo‘ljallangan ijtimoiy-iqtisodiy rivojlanish strategiyasini ta’minlashda barqaror rivojlanishga erishish vositalari hisoblangan iqtisodiy, ijtimoiy va ekologik komponentlarni o‘zaro muvofiqlashtirish murakkab vazifa hisoblanadi. “Yashil iqtisodiyot”ga o‘tishning muhim vazifalari qatoriga iqtisodiyotning energiya samaradorligini oshirish va tabiiy resurslarni oqilona iste’mol qilish hisoblanadi. Yuz berayotgan global iqlim o‘zgarishi va salbiy antropogen ta’sirlar natijasida qishloq xo‘jaligi yerlari cho‘llanishi va o‘z xususiyatini yo‘qotib borayotganligi oqibatida qishloq xo‘jaligi uchun mo‘ljallangan yerlarning 2 mlrd gektari ya’ni 14,9 % yerlar yaroqsiz holga kelib qolgan [3]. Aholi sonining o‘sishi, yer, suv va energiya resurslariga bo‘lgan talabning oshishi, shuningdek iqlimning keskin o‘zgarishi oziq ovqat xavfsizligiga ta’sir etuvchi omillardir. Oziq ovqat xavfsizligini ta’minlashning asosiy yo‘nalishlaridan biri qishloq xo‘jaligini rivojlantirish va yer resurslaridan foydalanish tizimini modernizatsiya qilish va takomillashtirish hisoblanadi.So‘nggi yillarda qishloq xo‘jaligi yer resurslaridan maqsadli va samarali foydalanmaslik,ularni tarmoq ichida taqsimlash va qayta taqsimlashning samarasizligi,yerlar unumdorligining pasayib ketish holatlari kuzatilmoqda.Bu turdagi muammolarga samarali yechim topish va uni amamlga oshirish uchun aynan “Yashil iqtisodiyot”ga o‘tish sharoitida qishloq xo‘jaligida yer resurslaridan samarali foydalanishni takomillashtirish va ushbu yo‘nalishni rivojlantiruvchi taklif va tavsiyalar ishlab chiqish,ularni amaliyotga tadbiq etish,bu sohada rivojlanayotgan mamlakatlar tajribasidan foydalanish muhim ahamiyat kasb etadi.

Adabiyotlar tahlili

Qishloq xo‘jaligida resurslardan foydalanishni va shuningdek, yer resurslaridan samarali foydalanishini rivojalntirish borasida ko‘plab xorijlik va yurtimiz olimlari o‘z izlanishlarini olib borgan bo‘lib, bunda tarmoqni rivojlantirish uchun aynan xorij tajribalarini o‘rganish va amaliyotga joriy etishning o‘rni haqida o‘zlarining ilmiy fikr mulozalarini yuritib, tahlillarni amamlga oshirgandir.

“Yashil iqtisodiyot”ga o‘tishning zaruriyati,mohiyati, uning hozirgi kundagi dolzarbligi va mamlakatimizda “Yashil iqtisodiyot”ga o‘tishda tabiiy resurslarning cheklanganligi va ulardan samarali foydalanish,uning tamoyillari haqida Vahobov A.V .,Xajibakiyev Sh.X va boshqalar o‘zlarining darslik va monografiyalarida kengroq yoritganlar[4].Yerdan foydalanishning aniqroq tushunchasini esa S.Tkachuk “Yerdan foydalanish bu-tabiat qonunlari bilan hamohang tarzda iqtisodiy qonunlardan ongli asosda foydalanish bilan ob’ektiv rivojlanadigan yer resurslaridan foydalanishning ijtimoiy-iqtisodiy shakllari va ishlab chiqarish usullarining yig‘indisidir” deb ifodalaydi[5]. Yurtimiz olimlaridan esa A.S.Altiyev yerdan foydalanish tizimi, uning elementlari,turlarini va ularning o‘zaro tizimli bog‘liqlikda ekanligini yoritib bergan[6]. Degradadsiyaga uchragan sug‘oriladigan yerlarni tiklash va foydalanishga kiritish mehanizmini takomillashtirish,ularni moliyalashtirish xarajatlari,degradadsiyaga uchragan yerlarni tiklash va

monitoringini yuritishning hozirgi holatdagi tahlili bo‘yicha ilmiy asoslangan taklif va tavsiyalarni Usmanov Yu.A. o‘zining ilmiy ishlarida kengroq yoritganlar[7].

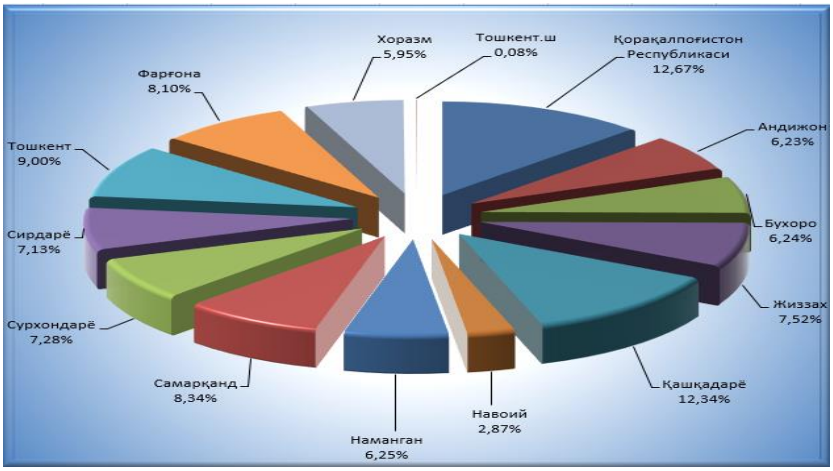
Tadqiqot metodologiyasi

İlmiy tadqiqotimiz davomida biz ushbu maqolada statistik ma’lumotlar tahlili, analitik tahli va qiyosiy tahlil usullaridan foydalangan holda yurtimizda yer resurslaridan foydalanish tizimi va uning samaradorligini oshirishda xorijiy mamlakatlar tajribalaridan samarali foydalanish va mamlakatimizda yer munosabatlarini tartibga solish mexanizmi yer resurslaridan foydalanish tizimini yanada rivojlantirish uchun foydalanishga taklif etishni maqsad qilib oldik.

Natija va muhokamalar

Ma’lumki, so‘nggi yillarda qishloq xo‘jaligi yer resurslaridan maqsadli va samarali foydalanmaslik, ularni tarmoq ichida va tarmoqlararo taqsimlash va qayta taqsimlashning samarasizligi, yerlarni noqishloq xo‘jaligi ehtiyojlari uchun iqtisodiy va texnologik asoslanmasdan o‘tkazilishi va eng achinarlisi, yerlar unumdorligining pasayib ketishi holatlari kuzatilmoqda. Ayniqsa, “...yer maydonlarini optimallashtirishdagi kamchiliklar, ayrim fermer xo‘jaliklari yetarlicha aylanma mablag‘lar, zarur texnika va boshqa moddiy-texnika resurslariga ega emasliklari qishloq xo‘jaligi ekinlarining hosildorligiga, shartnoma majburiyatlari bajarilishiga va fermer xo‘jaliklarining rentabelligiga salbiy ta’sir ko‘rsatmoqda”[2]. Shuning uchun ham, mamlakatimiz iqtisodiyotini innovatsion isloh qilish va modernizatsiyalash sharoitida yer resurslaridan foydalanish tizimini tartibga solish va uning mexanizmlarini takomillashtirish nafaqat qishloq xo‘jaligini barqaror rivojlantirish, fermer, dehqon xo‘jaligi va tomorqa yerlaridan samarali foydalanish, balki mahsulotlar ishlab chiqarish samaradorligi va raqobatdoshligini oshirish, respublikamiz oziq-ovqat xavfsizligini ta’minlash va eksport salohiyatini yuksaltirish borasidagi eng muhim ustuvor vazifalardan biriga aylanmoqda. Zero, qishloq xo‘jaligida eng muhim va asosiy ishlab chiqarish vositasi hisoblanuvchi yer resurslaridan foydalanish tizimi umum iqtisodiy, shuningdek agrosanoat tarmoqlari yaxlit tizimining ajralmas va uzviy tarkibiy qismi bo‘lib, u o‘z navbatida sohani innovatsion rivojlantirish bosqichlari talablari va tamoyillariga mos keladigan mexanizmlarni ilmiy-nazariy asoslashni va ularni amaliyotga samarali tatbiq etishni taqozo qiladi.

Jahon bo‘yicha aholi jon boshiga to‘g‘ri keladigan o‘rtacha haydaladigan yer maydoni 0,3 gektarni tashkil etadi.Shu jumladan AQSH da bu ko‘rsatkich 0,79 gektarga,Kanadada 1,79 gektarga,Xitoyda 0,09 gektarga,Yaponiyada 0,03 gektarga tengdir[8].



1-rasm.Qoraqalpog‘iston respublikasi,viloyatlar va Toshkent shaxri bo‘yicha sug‘oriladigan qishloq xo‘jaligi yer turlarining taqsimlanishi.(% hisobida)

Yuqoridagi jadvalga ko‘ra O‘zbekiston Respublikasi hududining 58,21 foizini qishloq xo‘jaligiga mo‘ljallangan yerlar egallagan bo‘lib, qishloq xo‘jaligi ishlab chiqarishda asosiy vosita hisoblanadi. Respublika hududida qishloq xo‘jaligi maqsadlariga mo‘ljallangan yerlarning taqsimlanishi tabiiy iqlim omillariga binoan belgilanadi.Mamlakatning ma’muriy chegarasidagi umumiy yer maydoni 2024 yil 1 yanvar holatiga jami yerlar 44 892,4 ming gektarni, shundan sug‘oriladigan yerlar esa 4 342,5 ming gektarni yoki umumiy yer maydonining 9,7 foizini tashkil qiladi.Respublikada qishloq xo‘jaligi korxonalari va tashkilotlarining soni fermer xo‘jaliklari bilan birgalikda olganda, 2024 yil 1 yanvar holatiga ko‘ra 787 808 ta bo‘lib, ularga biriktirib berilgan yerlarning umumiy yer maydoni 26 132,2 ming gektarni, shu jumladan qishloq xo‘jalik yer turlari maydoni 21 206,5 ming gektarni, shundan 3 701,0 ming gektari sug‘oriladigan yerlarni tashkil qiladi.Asosiy qishloq xo‘jaligi mahsulotlari sug‘oriladigan yerlarda yetishtirilishini va bunday yerlar umumiy yer maydonimizning 9,7 foizini tashkil etadi.Shular jumlasidan Sirdaryo viloyatining umumiy yer maydoni 427,6 ming ga.ni tashkil etib,sug‘oriladigan yer maydoni 287,2 ming ga.ni qishloq xo‘jaligiga mo‘ljallangan yerlar 286,6 ming ga.ni tashkil etadi.Yuqoridagilari inobatga olib hamda “Yashil iqtisodiyot”ga o‘tishni qo‘llab quvvatlagan holda qishloq xo‘jaligida quyidagi chora tadbirlarni amalga oshirishimiz maqsadga muvofiqdir:

-tuproq unumdorligini saqlash va oshirish, ularning nazoratini amalga oshirish;

-suvdan foydalanish manbalarini hisobga olgan holda almashinib ekish;

-yerlarning foydalanishdan chiqib ketishini oldini olish;

-lazer yordamida tekislash ishlarini jadal rivojlantirish;

-horijiy mamlakatlar tajribasidan foydalangan holda tuproq unumdorligi monitoringini olib borish;

-almashinib ekishni keng joriy qilish va bu jarayon yerdan foydalanuvchilar tomonidan foydalanishni amaliyotda ko‘proq tashkil etish maqsadga muvofiqdir.

Xulosa

Hozirgi kunda ko‘pgina yer bozori rivojlangan mamlakatlarda barcha mulkchilikni,xususan yer mulkdorlarining huquqlarini himoya qiluvchi qonunlar qabul qilinmoqda.Ushbu qonunlar asosida yerlarni erkin tarzda sotish va sotib olish mumkin.Misol tariqasida AQSHda fermerlar kichik va yirik guruhga ajratilgan.AQSH qishloq xo‘jaligi vazirligida Davlat tuproq xizmati faoliyat olib boradi va tuproq unumdorligi holati monitoringini olib boradi uning tomonidan aniq yer uchastkalari uchun muayyan texnologiyalar ishlab chiqilgan.Shunga asoslangan holda fermer xo‘jaliklari tuproq unumdorligi borasida qayg‘urmaydi,balki taqdim etilgan aniq tavsiyalar va texnologiyalar asosida kredit oladi va sug‘urta qilinadi[9].Yuqorida sanab o‘tilgan horijiy mamlakatlarda yer munosabatlarini tartibga solishning tamoyillari O‘zbekiston uchun ham dolzarb bo‘lib,bozor iqtisodiyoti sharoitida yer munosabatlarini tartibga solish borasida qonunlar ishlab chiqishda va amaliyotda iqtisodiy tadbirlar ishlab chiqishda foydalanish mumkindir.O‘zbekiston sharoitida jahonning ayrim rivojlangan va rivojlanayotgan mamlakatlarida yerga egalik qilish tizimining ijobiy jihatlaridan – ayrim rivojlangan davlatlardagi yerlardan foydalanishni rejalashtirish, turli xil ixtisoslashuvga ega fermer xo‘jaliklari yer maydonlarining maksimal va minimal o‘lchamini belgilab qo‘yish, yer ijarasi munosabatlarini yanada kengaytirish, uning samarali uslublarini joriy qilish, xorijiy fuqarolar, jismoniy va yuridik shaxslarning yerlardan, xususan qishloq xo‘jaligiga mo‘ljallangan yerlardan foydalanishi faqat ijara huquqi shartlari asosida amalga oshirilishi yuzasidan tajribani O‘zbekistonda ham joriy qilishni tavsiya qilamiz.

РАСЧЕТ ЭКОНОМИЧЕСКОЙ ЭФФЕКТИВНОСТИ СИСТЕМЫ МОНИТОРИНГА НА ОСНОВЕ МНОГОАГЕНТНОЙ ТЕХНОЛОГИИ

Тураева Насиба Мирхамидовна
Свободный соискатель Ташкентского университета информационных технологий имени Мухаммада Ал-Хоразмий
https://doi.org/10.5281/zenodo.14736059

Для аэропорта внедрение многоагентной системы мониторинга имеет значительное экономическое и операционное значение. Это связано с необходимостью повышения эффективности управления сложной инфраструктурой, включающей в себя телекоммуникационные и аэронавигационные системы. В исследовании рассмотрены ключевые аспекты, обосновывающие важность и экономическую целесообразность использования таких технологий.

Рис.1. Экономические возможности многоагентной системы мониторинга

Указанное улучшает общую управляемость сети и позволяет оптимизировать работу операторов, что, в свою очередь, снижает затраты на эксплуатацию и техническое обслуживание.

Проводя анализ экономической эффективности многоагентной сетевой системы мониторинга автором научной работы, были изучены экономические расчеты ученых в области экономики и разработана модель расчета экономической эффективности системы мониторинга сетей телекоммуникаций аэронавигационных систем на основе многоагентной технологии (табл.1.).

Изучение и анализ деятельности ведущих авиакомпаний мира, таких как **Delta Air Lines (США), Lufthansa (Германия)** и **Emirates (ОАЭ),** показал, что они активно внедряют технологии многоагентных систем для улучшения мониторинга и устойчивого управления инфраструктурой. Рассмотрим основные сходства и различия:

- **Постоянный мониторинг телекоммуникационных сетей**:

В странах с развитой телекоммуникационной инфраструктурой» [8; с.141] (например, в ОАЭ) авиационные компании используют интегрированные системы для обеспечения постоянного мониторинга сетей, что важно для стабильности связи. Это позволяет минимизировать задержки в передаче данных между диспетчерскими службами и воздушными судами. [9; с.2-4, 76; с.20]

Таблица 1

Анализ экономической эффективности многоагентной системы мониторинга сетей телекоммуникаций аэронавигационных систем

Элемент	Расчет (формула)	Значение элементов	Описание	Максимальное значение	Минимальное значение
1	2	3	4	5	6
1.Таблица начальных затрат					
Разработка (закуп) ПО	$C_{dev} = R_{dev} * T_{dev}$ [1; с.1-6]	C_{dev} – программное обеспечение. R_{dev} – стоимость разработки за час. T_{dev} – время разработки (часов).	Затраты на разработку программного обеспечения, включая алгоритмы мониторинга.	Зависит от сложности ПО	<5% от начальных затрат
Оборудование	$C_{equip} = \Sigma (C_{server} + C_{sensor} + C_{network})$ [2; с.8-9]	C_{server} – стоимость серверов. C_{sensor} – стоимость датчиков. $C_{network}$ – стоимость сетевого оборудования.	Затраты на серверы, датчики и сетевое оборудование.	Зависит от размера сети	Зависит от базовой конфигурации
Интеграция	$C_{integration} = R_{int} * T_{int} + C_{training}$ [3; с.915-916]	R_{int} – стоимость интеграции за час. T_{int} – время интеграции. $C_{training}$ – расходы на обучение сотрудников.	Расходы на интеграцию системы в существующую инфраструктуру и обучение сотрудников.	<15%	>5%
2. Таблица эксплуатационных затрат [4; с.731-732]					
Обслуживание	$C_{maint} = (C_{servermaint} + C_{sensormaint} + C_{softwareupdate}) * N_{year}$	$C_{servermaint}$ – затраты на обслуживание серверов. $C_{sensormaint}$ – затраты на обслуживание датчиков. $C_{softwareupdate}$ – обновление ПО. N_{year} – количество лет эксплуатации.	Регулярное обслуживание серверов и датчиков, обновление ПО.	<10%	>2%
Энергопотребление	$C_{energy} = P_{total} * H_{year} * C_{kWh}$	P_{total} – общая мощность оборудования. H_{year} – количество рабочих часов в год. C_{kWh} – стоимость 1 кВт/ч.	Затраты на потребляемую оборудованием электроэнергию.	<20%	>1,5%
3. Таблица экономической выгоды					
Экономия на ручных операциях	$S_{time} = (T_{manual} - T_{automated}) * R_{staff} * N_{staff}$ [5; с.97]	T_{manual} – время на ручные операции. $T_{automated}$ – время автоматизированных операций. R_{staff} – зарплата сотрудника за час. N_{staff} – количество сотрудников.	Сокращение времени на выполнение задач благодаря автоматизации.	<80%	>20%
Снижение ошибок	$S_{error} = N_{errors} * C_{error}$ [6; с.32-33]	N_{errors} – количество ошибок до автоматизации. C_{error} – стоимость устранения одной ошибки.	Снижение затрат на устранение ошибок, связанных с мониторингом.	<60%	>10%
4. Таблица расчета ROI и окупаемости [7; с.76-78]					
ROI (Return On Investment — возврат инвестиций)	$ROI = (S_{total} - C_{initial} - C_{operational}) / C_{initial} * 100\%$	S_{total} – общая экономическая выгода. $C_{initial}$ – начальные затраты. $C_{operational}$ – эксплуатационные затраты.	Процентное соотношение прибыли к затратам на внедрение и эксплуатацию.	+100%	>50%
Период окупаемости	$T_{payback} = C_{initial} / (S_{total} - C_{operational})$	$T_{payback}$ – срок окупаемости в годах.	Время, за которое инвестиции в систему окупятся.		

В Узбекистане важность этой функции также высока, учитывая географические особенности страны и необходимость поддержания стабильного телекоммуникационного канала между удаленными регионами и центральными диспетчерскими пунктами. В статье "Technical Challenges of IoT deployment in Developing countries" обсуждаются проблемы, связанные с внедрением IoT (интернет вещей) в развивающихся странах, такие как высокие первоначальные затраты на оборудование, необходимость адаптации инфраструктуры и сложность поддержания сетевой безопасности. [10; с.3]

- **Быстрая реакция на изменения и минимизация простоев**:

Авиакомпании, такие как Emirates, используют многоагентные системы мониторинга для быстрого выявления неисправностей и перенаправления ресурсов, что сокращает время простоя. Они также используют искусственный интеллект (ИИ) для прогнозирования потенциальных неисправностей. В результате уровень предотвращения ошибок снизил риск на 22 % и увеличил реализацию финансовой деятельности на 7 %. Это демонстрируют, как современные авиакомпании, включая Emirates, используют ИИ и многоагентные системы мониторинга для улучшения процессов технического обслуживания и минимизации времени простоя самолетов. [11; с.86-89]

В Узбекистане внедрение многоагентной системы мониторинга позволит быстрее выявлять и устранять проблемы сети, что особенно важно для сокращения времени простоя и повышения доступности воздушного флота в условиях сравнительно ограниченного числа собственных воздушных судов.

Экономический анализ внедрения в Узбекистане. Экономическая эффективность внедрения многоагентной системы мониторинга телекоммуникационной сети аэронавигационных систем зависит от нескольких основных факторов: начальные затраты, эксплуатационные расходы, потенциал экономии и возврат на инвестиции (ROI).

- **Начальные затраты**:

Включают в себя закупку оборудования, разработку и адаптацию программного обеспечения, а также обучение персонала. В Узбекистане, где бюджет авиакомпаний может быть более ограничен по сравнению с крупными зарубежными конкурентами, начальные вложения требуют тщательного планирования. Однако долгосрочные преимущества автоматизации могут компенсировать эти затраты.

- **Эксплуатационные расходы**:

Эксплуатационные затраты в Узбекистане могут быть ниже по сравнению с США или странами Европы из-за более низкой стоимости рабочей силы и электроэнергии. Тем не менее, сложность управления телекоммуникационной сетью и необходимая квалификация персонала делают критическим аспектом интеграцию и обслуживание таких систем. Пример: если расходы на эксплуатацию и обслуживание системы составляют 300 тыс. долларов США в год, но за счет автоматизации экономится около 1500 часов работы персонала, это может дать значительную экономию. В исследовании "Towards Autonomous Aviation Operations: What can we learn from other areas of automation?" обсуждаются примеры автоматизации в авиационной отрасли, включая использование автоматизированных систем для управления воздушным движением и обслуживания. Это способствует снижению эксплуатационных расходов и увеличению эффективности работы систем [12; с.2]

Расчет экономической эффективности внедрения автоматизации.

1. Сокращение затрат на обслуживании:

Введение автоматизации в процесс мониторинга снижает потребность в ручных проверках и техническом обслуживании. Например, в Германии автоматизация позволяет сократить затраты на обслуживание на 15-20%. Этот расчет основан на анализе данных о затратах на техническое обслуживание до и после внедрения автоматизированных систем в авиационных компаниях Германии. Например, если ежегодные затраты на техническое обслуживание составляли порядка 50 млн долларов до внедрения автоматизации, а затем

снизились до 42.5-40 млн долларов, что составляет 15-20%. Формула для расчета экономии выглядит следующим образом:

Экономия = (Затраты до автоматизации - Затраты после автоматизации) / Затраты до автоматизации × 100% (1) [13].

(50 - 42.5) / 50 × 100% = 15%

2. Внедрение автоматизации в Узбекистане

В условиях Узбекистана автоматизация также может снизить затраты на проверку технического состояния телекоммуникационного оборудования, что особенно важно в условиях увеличивающегося воздушного трафика и необходимости поддержания стабильной работы. Для оценки сокращения затрат в Узбекистане можно использовать аналогичный метод. Предположим, что текущие затраты на проверки и техническое обслуживание составляют 1 млн долларов в год. Внедрение автоматизации позволяет сократить эти расходы на 10-15%. Тогда ожидаемая экономия будет составлять:

Экономия = 1 млн долларов × 10% = 0.1 млн долларов в год (при 10%)

или 1 млн долларов × 15% = 0.15 млн долларов в год (при 15%)

3. Экономия при внедрении многоагентной системы мониторинга (в Узаэронавигации)

Принимая во внимание, что годовой оборот составляет порядка 100 млн долларов, а внедрение многоагентной системы мониторинга позволяет сократить эксплуатационные затраты на 10-15%, то расчет ожидаемой экономии выглядит следующим образом:

Экономия = Годовой оборот × Процент снижения затрат (2)

100 млн долларов × 10% = 10 млн долларов в год (при 10%)

или 100 млн долларов × 15% = 15 млн долларов в год (при 15%)

Прогнозируется, что внедрение многоагентной системы мониторинга телекоммуникационной сети аэронавигационных систем может сократить эксплуатационные затраты на 10-15%, что для компании с годовым оборотом в 100 млн долларов даст экономию в размере 10-15 млн долларов в год.

Выводы и научное обоснование необходимости.

- **Укрепление позиций на рынке**: В условиях глобальной конкуренции внедрение современных технологий позволит повысить свою конкурентоспособность и предложить своим клиентам более надежную связь и безопасные полеты.
- **Снижение операционных затрат**: Автоматизация и интеграция систем мониторинга позволяют сократить расходы на обслуживание и повысить эффективность использования ресурсов.
- **Повышение надежности и безопасности**: Стабильный мониторинг телекоммуникационной и аэронавигационной инфраструктуры снижает риски сбоев и повышает надежность всей системы, что имеет критическое значение для безопасности пассажиров и персонала.
- **Экономическая выгода для страны**: Повышение эффективности авиакомпании положительно сказывается на экономике Узбекистана в целом, так как улучшение воздушного сообщения способствует увеличению пассажиропотока за счет развития туризма и деловой активности, что приводит к росту ВВП и созданию новых рабочих мест.

Экономическое обоснование внедрения многоагентных систем мониторинга телекоммуникационной сети заключается в сокращении операционных затрат и повышении эффективности использования ресурсов. Ожидаемая сумма экономии составляет 1485 млрд сумов в год, что делает проект окупаемым в течение 2-3 лет (табл.2).

Таблица 2.

Экономические показатели на 2023 год и ожидаемые значения после внедрения.

Показатель	**Значение на 2023 год (млрд. сумов)**	**Ожидаемое значение после внедрения (млрд. сумов)**	**Экономический эффект (млрд. сумов)**
Затраты на обслуживание оборудования	660	330	330
Затраты на устранение ошибок	1260	380	880
Экономия за счет снижения времени простоя	0	220	220
Снижение затрат на электроэнергию	0	55	55
Общая экономия	-	-	1485

Таким образом, внедрение многоагентной системы мониторинга телекоммуникационной сети аэронавигационных систем в авиации является стратегически важным шагом для повышения эффективности и надежности работы компании. Этот переход позволит оптимизировать процессы, сократить операционные затраты и повысить качество обслуживания телекоммуникационной сети. Внедрение таких технологий представляет собой не только, как средства повышения операционной эффективности, но и способствует росту конкурентоспособности Узбекистана на мировом рынке авиаперевозок. Высокий уровень автоматизации и оптимизация расходов делают систему мониторинга экономически целесообразным, а также обеспечивают стабильность и развитие транспортной инфраструктуры страны.

QISHLOQ XO‘JALIGI SUG‘URTALASH TIZIMINI TAKOMILLASHTIRISH YO‘LLARI

Mardonov Mashrab
Qishloq xo‘jaligi vazirligi huzuridagi Oziq-ovqat va qishloq xo‘jaligi sohasida strategik rivojlanish va tadqiqotlar xalqaro markazi 2-bosqich tayanch doktoranti
https://doi.org/10.5281/zenodo.14736068

Annotasiya. *Qishloq xo‘jaligi har bir mamlakat iqtisodiyotida strategik ahamiyatga ega bo‘lgan sohalardan biri hisoblanadi. Bu soha aholining oziq-ovqat xavfsizligini ta’minlash, yangi ish o‘rinlarini yaratish, mamlakat eksport salohiyatini oshirish kabi ko‘plab vazifalarni bajaradi. Biroq, qishloq xo‘jaligi o‘ziga xos xatarlar va tavakkallar bilan bog‘liq bo‘lib, bu xavf-xatarlarni samarali boshqarish uchun sug‘urta tizimining ahamiyati katta. Ushbu maqolada qishloq xo‘jaligi sug‘urtasini takomillashtirish yo‘llari haqida batafsil to‘xtalib o‘tiladi.*
Kalit so‘zlar: *qishloq xo‘jaligi, Sug‘urta tizimi, Sug‘urtani takomillashtirish, Tabiiy ofatlar, Fermerlar himoyasi, Sug‘urta mahsulotlari, Moliyaviy barqarorlik*

Kirish: Qishloq xo‘jaligi har qanday davlat iqtisodiyotida muhim ahamiyatga ega strategik sohaga kiradi. Bu soha nafaqat aholini oziq-ovqat mahsulotlari bilan ta’minlaydi, balki milliy iqtisodiyotga ijobiy ta’sir ko‘rsatadi, yangi ish o‘rinlarini yaratadi va eksport imkoniyatlarini kengaytiradi. Aholi soni oshib borayotgan bugungi kunda qishloq xo‘jaligi yanada katta e'tiborni talab etadi, chunki aholini oziq-ovqat mahsulotlari bilan yetarli darajada ta’minlash oziq-ovqat xavfsizligiga bevosita ta’sir ko‘rsatadi. Shu bilan birga, qishloq xo‘jaligi tabiiy omillar va boshqa iqtisodiy-ijtimoiy xatarlar bilan bog‘liq bo‘lgani sababli, ushbu sohada barqarorlik va himoya mexanizmlari muhim ahamiyatga ega.

Qishloq xo‘jaligida barqarorlikka erishish uchun har qanday noxush sharoitlarda fermer xo‘jaliklarini va dehqonlarni moliyaviy jihatdan qo‘llab-quvvatlash zarurati tug‘iladi. Tabiiy ofatlar, qurg‘oqchilik, sel, zararkunandalar hujumi, o‘simlik kasalliklari kabi xavflar hosilning yo‘qotilishiga olib kelishi mumkin va bu fermerlar va agrokompaniyalar uchun katta iqtisodiy zarba beradi. Shu nuqtai nazardan, qishloq xo‘jaligini himoya qilishning asosiy vositalaridan biri bu sug‘urtalash tizimi hisoblanadi. Qishloq xo‘jaligi sug‘urtasi nafaqat ishlab chiqaruvchilarga himoya beradi, balki ularning moliyaviy barqarorligini ta’minlab, investitsiyaviy salohiyatni oshiradi va umuman olganda iqtisodiy barqarorlikka xizmat qiladi.

Tahlil va Natijalar.

Mamlakatimiz qishloq xo‘jalik sohasida olib borilayotgan keng ko‘lamli islohotlarning asl maqsadi, bu mavjud yer va suv resurslaridan oqilona va samarali foydalana oladigan, munosib egalar qo‘liga topshirishdir. Oqilona va samarali xo‘jalik yuritish tizimini yaratish uchun, boshqa moliyaviy tizimlar qatori, sug‘urta xizmatlarini rivojlantirish zarurati ham ushbu sohada bugungi kunda yechimini kutayotgan masalalardan biridir. Zero, qishloq xo‘jaligi ishlab chiqarishining kutilmagan noxush ob-havo va tabiat injiqliklariga qanchalik ta`sirchanligini inobatga olgan holda, ushbu sohada xizmat ko‘rsatayotgan korxonalar moliyaviy barqarorligini kafolatlash, fermerlar qatori, ushbu sohada band bo‘lgan aholi daromadlari va ish o‘rinlarini barqarorlashtirishga xizmat qiladi. Qishloq xo‘jalik sohasi, bir qator sabablarga ko‘ra, ko‘zlangan natijaga erishish va xo‘jalik yuritish sharoitlari shakllanishiga to‘sqinlik qiluvchi asosiy omillarni chuqur o‘rganishni talab

qiladi. Qishloq xo‘jaligi sohasida qaltisliklarni tan olmaslik va ularni boshqarish tizimini rivojlantirishdan bosh tortish ayrim qishloq xo‘jaligi ishlab chiqaruvchilarini, ba`zan qishloq xo‘jaligi sohasini va umuman jamiyatni uzluksiz rivojlanishiga, agrar sohani samarali kreditlash tizimini yaratishga to‘sqinlik qilishi mumkin. Demak, qishloq xo‘jalik sug‘urtasi tizimining asosiy maqsadi va vazifasi qishloq xo‘jaligi ishlab chiqaruvchilarini qo‘llab-quvvatlagan holda ularga tabiat injikliqlariga qarshi moliyaviy himoyani taklif etishdan iborat.

Bugungi kunda “O‘zagrosug‘urta” Kompaniyasi Respublika sug‘urta bozorida o‘zining nufuzli o‘rniga ega bo‘lib, 187 ta xududiy bo‘linmalari, 21 ta shu`ba korxonalari hamda 600 taga yakin shaxobchalari orqali yuridik va jismoniy shaxslarga 90 ga yaqin sug‘urta turlari bilan sug‘urta xizmatlarini ko‘rsatib kelmoqda. Hukumatimiz tomonidan istiqbolda qishloq xo‘jaligini rivojlantirishni fermerlik harakati bilan bog‘lar ekan, bu xol Kompaniya faoliyatida ham o‘z aksini topgan. Yildan yilga fermer xo‘jaliklariga taklif etilayotgan sug‘urta turlari ko‘payib, fermerlar sug‘urta kamrovini kengaytirish uchun shartnomalar shartlari yengillashtirilmoqda. Fermerlarga qulay va tez xizmat ko‘rsatish uchun, har bir tuman xududida agentlik shaxobchalari ochilmoqda, qishloq aholisi bandligini oshirish va keng qamrovli sug‘urta xizmatlarini ko‘rsatish maqsadida, maxalla va qishloq fuqarolar yig‘inlarida o‘rindosh agentlar yollash bo‘yicha chora-tadbirlar ishlab chiqilib, bu borada izchil ishlar olib borilmoqda. Bu o‘z-o‘zidan Kompaniya tomonidan fermer xo‘jaliklari bilan kelajakda keng ko‘lamli va samarali ish olib borish maqsadini oshkor etadi.

Xozirgi kunda Kompaniyamiz tomonidan Respublikamiz fermerlariga quyidagi sug‘urta turlarini:

paxta va g‘alla hosilini sug‘urtalash;
qishloq xo‘jalik ekinlarini qayta ekishdan sug‘urtalash;
ko‘p yillik dov-daraxtlarni sug‘urtalash;
bog‘ hosilini sug‘urtalash;
sholi hosilini sug‘urtalash;
chorva mollarini sug‘urtalash;

issiqxonada yetishtirilayotgan qishloq xo‘jalik maxsulotlarini sug‘urtalash kabi 40ga yakin sug‘urta turlarini taklif etamiz. Qishloq xo‘jaligi ekinlari hosili quyidagi qaltisliklardan sug‘urtalanadi, tabiiy ofatlardan: yongin, bo‘ron, dovul, jala, ko‘chki, tuprokning cho‘kishi, sel, yashin urishi, do‘l, qalin kor yog‘ishi yoki qattiq sovuq tushishi, garmsel, sug‘orish manbalaridagi suvsizlik yoki kamsuvlik, suv bosishi, zararkunandalar, biologik kasalliklar, uzoq davom etgan yog‘ingarchilik tufayli ekinning yotib qolishi natijasida hosilning nobud bo‘lishidan sug‘urtalanadi.

2011 yilning 9 oyi davomida «O‘zagrosug‘urta» Davlat-aktsiyadorlik sug‘urta kompaniyasi tomonidan jami sug‘urta hodisalari bo‘yicha 3809,7 mln. so‘m sug‘urta tovoni to‘lab berilgan bo‘lsa, shundan 403 ta fermer xo‘jaliklari ekinlari hosilini sug‘urtasi bo‘yicha 689,8 mln. so‘m, tijorat banklari tomonidan fermer xo‘jaliklariga berilgan imtiyozli kreditlarni qaytarilmasligi uchun tijorat banklariga 97,4 mln. so‘m, chorva mollari sug‘urtasi bo‘yicha 30,3 mln. so‘mni tashkil etdi.

Ma`lumki, bozor iqtisodi sharoitida o‘zaro munosabatlar asosan sub`ektlar o‘rtasida tuziladigan shartnomalar asosida yo‘lga qo‘yiladi. Har bir sug‘urta tashkiloti konunda belgilangan tartibda sug‘urtalanuvchilar bilan o‘zaro majburiyatlarini, ma`suliyatlarini javobgarlik doirasini,

majburiyat muddatlarini va boshqa ko‘rsatkichlarni tuziladigan shartnomalarda to‘lik ifodalashlari va so‘zsiz bajarishni ta`minlashlari lozim bo‘ladi.

Qishloq xo‘jaligida sug‘urta tizimini rivojlantirish bu sohada shartnomaviy munosabatlar bo‘yicha tomonlarning ma`suliyatlarini oshirishga, korxonalar moliya idoralaridan mablag‘ jalb eta bilish qobiliyatiga hamda ularning moliyaviy barqarorligini ta`minlashga ijobiy ta`sir ko‘rsatadi.

Shu bilan birga, olinadigan hosilini extiyotlash maqsadida barcha imkoniyatlaridan foydalanib sug‘urta shartnomasi tuzgan fermer xo‘jaliklariga kompaniyamiz tomonidan turli hodisalar natijasida ko‘rgan zararini olingan sug‘urta javobgarligi doirasida sug‘urta tovoni orqali qoplash kafolatlanadi.

Xulosa.

So‘nggi yillarda dunyo miqyosida qishloq xo‘jaligi sug‘urtasiga bo‘lgan qiziqish oshib bormoqda va ko‘plab mamlakatlar bu sohani qo‘llab-quvvatlash uchun turli dasturlar ishlab chiqmoqda. Masalan, AQSh, Kanada, Yevropa davlatlari va Hindistonda qishloq xo‘jaligi sug‘urtasini rivojlantirish bo‘yicha joriy etilgan tizimlar o‘zining yuqori samaradorligi bilan ajralib turadi. Bu davlatlar tajribasi shuni ko‘rsatadiki, sug‘urta tizimlarini diversifikatsiya qilish, innovatsion texnologiyalardan foydalanish, davlat ko‘magini kengaytirish kabi omillar qishloq xo‘jaligi sug‘urtasi tizimining muvaffaqiyatli rivojlanishiga xizmat qiladi.

O‘zbekistonda ham so‘nggi yillarda qishloq xo‘jaligi sug‘urtasini rivojlantirish va takomillashtirish bo‘yicha bir qator islohotlar amalga oshirilmoqda. Jumladan, qishloq xo‘jaligi sug‘urtasiga oid yangi qonunchilik hujjatlari qabul qilindi, davlat tomonidan subsidiyalar ajratish va imtiyozlar taqdim etish mexanizmlari yo‘lga qo‘yildi. Bu chora-tadbirlar sug‘urta tizimining yanada barqaror va ishonchli bo‘lishiga yordam beradi. Biroq, ushbu tizimni yanada takomillashtirish va zamonaviy talablar darajasiga ko‘tarish uchun qo‘shimcha chora-tadbirlarni amalga oshirish zarurati hamon dolzarbligicha qolmoqda.

MODERNIZING UNIVERSITY SERVICES IN UZBEKISTAN: A SERVQUAL FRAMEWORK APPROACH

Utkirov Abbos Meylievich
Graduate School, Westminster International University in Tashkent, Management Development Institute of Singapore in Tashkent

https://doi.org/10.5281/zenodo.14736183

Abstract. *Purpose – This study aims to assess service quality in higher education institutions (HEIs) in Uzbekistan through the SERVQUAL framework. It examines the impact of five critical service quality dimensions—reliability, assurance, tangibles, empathy, and responsiveness—on student satisfaction.*

Design/methodology/approach – Employing a quantitative survey approach, data were collected from 1,200 students using a structured questionnaire distributed via email, Telegram, and in-person. The SERVQUAL dimensions were validated through reliability analysis and exploratory factor analysis (EFA). Statistical methods, including regression analysis, were applied to test the relationships among the dimensions and their effects on service quality.

Findings – The results demonstrate that punctuality of classes (reliability), staff professionalism (tangibles), and financial transaction accuracy (assurance) significantly influence student satisfaction. Responsiveness and empathy also play important roles, albeit with mixed feedback. The SERVQUAL dimensions collectively explain a significant portion of the variance in service quality perceptions.

Practical implications – The findings underscore the need for HEI administrators to allocate resources for modernizing infrastructure, enhancing staff training, and improving non-academic services to bridge service quality gaps. Prioritizing reliability and tangibles can yield immediate improvements in student satisfaction.

Originality/value – This study is among the first to adapt the SERVQUAL model to the higher education context in Uzbekistan, providing actionable insights for HEIs in transitional economies. The findings offer a scalable framework for evaluating and enhancing service quality across similar settings.

Keywords*: service Quality, SERVQUAL Model, Higher Education, Student Satisfaction, Uzbekistan*

Introduction. Service quality has emerged as a pivotal factor for achieving a competitive edge in higher education institutions (HEIs), particularly in transitional economies such as Uzbekistan. As educational institutions undergo reforms to align with global standards, assessing service quality from the students' perspective becomes essential (Utkirov, 2024a, 2024b, 2024c, 2024d, 2024e, 2023).

The SERVQUAL model, introduced by Parasuraman et al. (1988), evaluates service quality through five key dimensions: reliability, responsiveness, assurance, tangibles, and empathy. This study seeks to:

1. Tailor the SERVQUAL model to the unique context of higher education in Uzbekistan.
2. Identify the dimensions that most significantly impact student satisfaction.

3. Provide actionable recommendations to improve service quality.

By pursuing these goals, the study aims to address the challenges HEIs face in delivering education that is focused on student needs.

Data and Methods

Sample:

The research involved 1,200 students from various HEIs across Uzbekistan, ensuring a broad representation of service quality perceptions.

Data Collection:

A structured questionnaire, based on the SERVQUAL framework, was used to gather data. Respondents evaluated service quality using a 7-point Likert scale, where 1 indicated "Strongly Disagree" and 7 indicated "Strongly Agree."

Instrument:

The questionnaire, designed to measure the five SERVQUAL dimensions (Parasuraman et al., 1985, 1988, 1990), included items such as "Lectures are conducted according to the schedule without delays" (Reliability) and "Classrooms are equipped with modern technical tools for teaching" (Tangibles). To maximize participation and ensure diverse responses, the survey was distributed through multiple channels: Telegram, leveraging its popularity among students; email, targeting institutional mailing lists; and in-person distribution, using paper-based questionnaires at university campuses. This multi-modal approach facilitated the inclusion of varied perspectives and enhanced the overall robustness of the data collection process (Utkirov, (2025c).

Research Framework

Table 1 outlines the primary dimensions that impact service quality, as highlighted in the literature, along with their definitions and corresponding references. These dimensions—reliability, responsiveness, assurance, tangibles, and empathy—are fundamental elements of the SERVQUAL model, as defined by Parasuraman et al. (1988).

Table 1. Factors influencing service quality

S. No.	Dimension	Meaning	References
1.	Reliability	Consistently providing services as promised with precision and reliability (Parasuraman et al., 1988).	(Hoque et al., 2023) (Fuchs et al., 2022)
2.	Responsiveness	Being proactive and responsive in assisting customers and delivering services promptly (Parasuraman et al., 1988).	(Akhlaghi et al., 2012) (Nanda et al., 2015)
3.	Assurance	Demonstrating staff expertise, courtesy, and the ability to foster trust and credibility (Parasuraman et al., 1988).	Akhlaghi et al., 2012, Mey et al., 2006, Alumran et al., 2020. (Nanda et al., 2015)
4.	Tangibles	Maintaining high standards for physical infrastructure, equipment, and the professional appearance of staff (Parasuraman et al., 1988).	(Auka, 2012) (Fuchs et al., 2022)
5.	Empathy	Prioritizing personalized care and attention to meet the unique needs of customers (Parasuraman et al., 1988).	(Alumran et al., 2021) (Fuchs et al., 2022; Nanda et al., 2015)

1. **Hypothesis 1 (HO1):** The quality of physical facilities, equipment, and the appearance of staff positively influences customers' perceptions of service quality.
2. **Hypothesis 2 (HO2):** A service provider's ability to reliably fulfill promises with accuracy enhances the perceived quality of service.
3. **Hypothesis 3 (HO3):** The willingness and readiness to assist customers and deliver timely service positively affect perceived service quality.
4. **Hypothesis 4 (HO4):** Employees' expertise, courtesy, and ability to instill trust and confidence are strongly associated with higher perceptions of service quality.
5. **Hypothesis 5 (HO5):** Providing personalized and compassionate attention to customers significantly enhances their overall perception of service quality.
6. 
Figure 1: Visual representation of the study's conceptual framework

Source: Adapted from Parasuraman et al., (1988).

Figure 1 presents the conceptual framework linking SERVQUAL dimensions—tangibility, reliability, responsiveness, assurance, and empathy—to service quality, as hypothesized in HO1 through HO5. Supported by Parasuraman et al. (1988) and further validated by studies such as Hoque et al. (2023) and Akhlaghi et al. (2012), the model highlights each dimension's direct and positive impact on perceived service quality (Utkirov, 2024b).

Main results

Key Findings

The SERVQUAL analysis highlighted key dimensions impacting service quality perceptions among students. High satisfaction was observed with **reliability**, particularly punctuality of classes (Mean = 4.92, SD = 1.61), and **tangibles**, where staff professionalism received the highest ratings (Mean = 4.93, SD = 1.73). **Assurance**, represented by financial transaction accuracy, also emerged as a critical factor in student satisfaction (Mean = 4.57, SD = 1.80). **Empathy**, reflecting positive communication between staff and students, demonstrated moderate satisfaction levels but indicated a need for improved student understanding (Mean = 4.44, SD = 1.75). However, **responsiveness**, particularly in non-academic services, received mixed feedback, highlighting areas requiring attention (Mean = 4.64, SD = 1.72). Overall, these findings emphasize the importance of focusing on staff professionalism, financial accuracy, and enhanced non-academic services to elevate service quality perceptions (table 2).

Statistical Analysis

Exploratory factor analysis (EFA) validated the SERVQUAL dimensions, with all components achieving eigenvalues greater than 1 and explaining a cumulative variance of 72.2%. Regression analysis further confirmed the significant influence of SERVQUAL dimensions on overall service quality, with an R^2 value of 0.753.

Implications

The findings emphasize the necessity of:

1. Strictly adhering to class schedules to improve reliability.
2. Prioritizing staff training to enhance assurance and empathy.
3. Improving non-academic services to address gaps in responsiveness.

Table 2: Overview of SERVQUAL Dimensions and Statistical Outcomes

Dimension	Mean	SD	Cronbach's Alpha	Key Observations
Reliability	4.92	1.61	0.842	High satisfaction with punctuality
Assurance	4.57	1.80	0.900	Importance of financial accuracy
Tangibles	4.93	1.73	0.866	Emphasis on staff professionalism
Empathy	4.44	1.75	0.911	Need for better student understanding
Responsiveness	4.64	1.72	0.925	Mixed feedback on non-academic services

Discussion

The study aligns with global research underscoring the importance of reliability and tangibles in educational service delivery, while also highlighting unique challenges specific to Uzbekistan, such as irregularities in non-academic support and outdated teaching materials (Utkirov, (2025d). Overcoming these issues will require investments in modern infrastructure and technology, regular training for academic and non-academic staff, and the establishment of robust feedback mechanisms to continuously improve service delivery. The SERVQUAL model demonstrated its effectiveness as a tool for evaluating service quality in Uzbek HEIs, providing a scalable framework applicable to similar contexts.

Conclusion

This research validates the application of the SERVQUAL model in Uzbekistan’s higher education system and identifies critical dimensions influencing service quality. Addressing these gaps will enhance student satisfaction and help align institutional practices with international standards. Future studies should consider longitudinal analyses of service quality trends and include insights from faculty and administrative staff to provide a more comprehensive perspective.

WAYS TO IMPROVE MARKETING ACTIVITIES IN TEXTILE ENTERPRISES

Ikramova Taxmina Latifovna
Samarkand Institute of Economics and Service, PhD supporting doctoral student
https://doi.org/10.5281/zenodo.14754327

Abstract. *In this article, maximum adaptation of the production and trade activities of the textile industry to the requirements of specific consumers, the main goal of consumer market segmentation, determining the specific characteristics of consumers, The strategy of innovative development of the market of industrial products, the organization of gross marketing activities of marketing research, its management, planning and control are discussed.*
Keywords: *enterprise, product, market, demand, supply, innovation, price, competition.*

Introduction. The strategy for innovative development of the light industry market allows for the economic assessment of the export potential of the industry based on the formation of supply and demand for the garment market, the study of the domestic and foreign markets, and the formation of an information and advertising system. In our opinion, forecasting supply and demand for the industry's products, increasing the volume of processing natural fibers, manufacturing new types of fabrics based on innovations, and adapting new production technologies to local raw materials should be the main directions of the strategy for the development of the garment market. In implementing this strategy, the training of highly qualified personnel, their continuous professional development and retraining are of particular importance. After all, no matter how good the ideas are, no matter how good the best equipment and technologies are, high results cannot be achieved without qualified personnel.

Marketing research is of great importance in the innovative development of light industry in our republic. Such activities allow for the analysis of the international market, research of product sales markets, study of marketing operations, collection and processing of information, research of the marketing mix, study of competitors, benchmarking, forecasting of demands and sales.

In the analytical function of marketing research, the factors of the external environment, the market, its elements and situation, consumers, the market, the product and the structure of the product, as well as the internal environment of the firm are analyzed. Factors controlled by the company's management are taken into account - technological process, financial situation, organizational structure, market selection, etc. External environmental factors include uncontrollable factors such as consumers, competition, government, economy, technology, independent media.

The reduction of centralized planning bodies in the textile industry in a market economy requires independent movement in the formation and maintenance of branched and complex relationships. Accordingly, it is necessary to use the methods of market segmentation to produce effective plans for the development of the textile industry.

Market segmentation is the process of dividing consumers and sellers of textile products into segments based on their needs and reactions in the market. The marketing concept in the trade sector is based on the fact that sellers use the product differently and buy it based on different

motivations. The textile industry needs to adapt its production and sales activities to the needs of specific consumers as much as possible. The main goal of consumer market segmentation is to group all consumers into products of the same type as much as possible.

Analysis of literature on the topic. In the economic literature, there are many different views on the essence and concept of efficiency, as well as its various criteria and indicators are classified. Many authors emphasize that efficiency is a relative indicator and recommend that it be determined by the ratio of costs to the obtained (achieved) result.

It is necessary to acknowledge the scientists who made a great contribution to the development of the theory of marketing in the economy, while the researches conducted in the field of marketing in our country for many years stemmed from national characteristics. These include M. Mukhammedov, M. Pardaev, R. Ibragimov. Y. Abdullaev, A. Saliev, M. Sharifkho‘jaev, B. Khodiev, K. Mirzayev, SH. Ergashkhodjaeva, Sh. Musaeva and others can be included.

Research methodology. Systematic approach, abstract-logical thinking, grouping, comparison, factor analysis, selective observation methods were used in the research process.

Analysis and results. A consumer market segment must meet a number of requirements:

1. Each segment should be clearly described.
2. It is necessary to identify the specific needs of consumers in each segment.
3. It is necessary to determine the specific characteristics of consumers.
4. The target segment of consumers must be large enough to cover the costs of producing the product to satisfy consumer demand.
5. The segment must be suitable for the company to sell the products it manufactures.

In our opinion, the main directions of the strategy for innovative development of the light industry market should be as follows:

1. Formation and development of light industrial engineering; re-equipment and modernization of existing enterprises; creation of new high-tech enterprises.

2. Formation of demand and supply and opportunities of the market of light industrial products, study of domestic and foreign market, formation of information and advertising system, economic assessment of export potential, forecasting of supply and demand for industry products.

3. Increase the processing of natural fibers, produce new types of fibers based on innovations, and develop new production technologies based on the adaptation of local raw materials.

4. Creating new jobs through the training of highly qualified personnel, continuous professional development and retraining, and expansion and restructuring of industry enterprises.

The importance of marketing research in organizing, managing, planning, and controlling overall marketing activities is one of the main features of modern marketing theory. In today's environment, when the consumer market is increasingly enriched with new goods and services, the importance of marketing research in identifying new opportunities and rationally using them is increasing day by day.

Consumers-buyers can purchase all types of goods and resources produced in the community. Therefore, the total volume of the social product, including the preparation of the means of production, is the main determining factor of marketing.

In the innovative development of the light industry of our republic, marketing research can be carried out in five major directions:

- firstly, by conducting advertising research, that is, to inspire buyers, advertising tests, types of advertising and their comparative effectiveness;

– secondly, through strategic planning and organizational policy, that is, making short and long-term forecasts, analyzing enterprise results and market opportunities, new diversification development opportunities, analyzing the operational overall and internal environment of the organization, as well as conducting export market monitoring;

– thirdly, by conducting research on corporate responsibility, that is, increasing the social responsibility of the organization in terms of shaping buyers and protecting the environment;

– fifth, by studying sales opportunities, conducting marketing research, that is, identifying potential or opportunity markets, analyzing market structure and changes in sales volume, conducting test marketing, and studying sales promotion procedures.

Of course, each organization, depending on its capabilities and established goals, conducts marketing research in one direction or another or in a specific industry. This takes into account the organization's strategy for a certain period of time and the required tactical actions. The goal of the enterprise is usually expressed in the form of financial indicators, and these indicators give an idea of what the enterprise intends to achieve over a certain period of time, for example, one year, two years, and five years.

Taking into account production capabilities, it is necessary to analyze the financial situation, the established policy towards employees, and the distribution channels of goods. When analyzing a separate sector, plans should be developed for each department, indicating the estimated values of income and expenses and aimed at specific goals, while the activities for the next year are clearly and concisely planned.

In marketing, the planning process requires, in addition to analyzing external factors, an internal analysis of the enterprise. By studying the enterprise, it is necessary to answer questions such as whether the level of training of sales managers meets the demand, what is the condition of the equipment, and whether the quality of our goods is satisfactory compared to that of our competitors.

The importance of a marketing program in the proper organization and implementation of marketing activities is immeasurable. This program consists of several sections, among which the "enterprise's market strategy" section identifies the main competitive advantages of the enterprise and assesses its opportunities for sales in the selected market. For this, the following specifications are defined:

- the expected profitability of the activity in the selected target market;
- the planned sales volume of the firm;
- dynamics of the firm's market share;
- demand dynamics and potential demand size.
- The company's competitive advantages can be described in terms of its products, price level, range of services, sales channel effectiveness, relevance of communication policy to current conditions, and brand popularity among potential customers. In this section of the program, it is also necessary to assess the company's activities in the selected market in terms of the provision of resources (financial, production, marketing, human). When developing a product policy, the following information is taken into account:

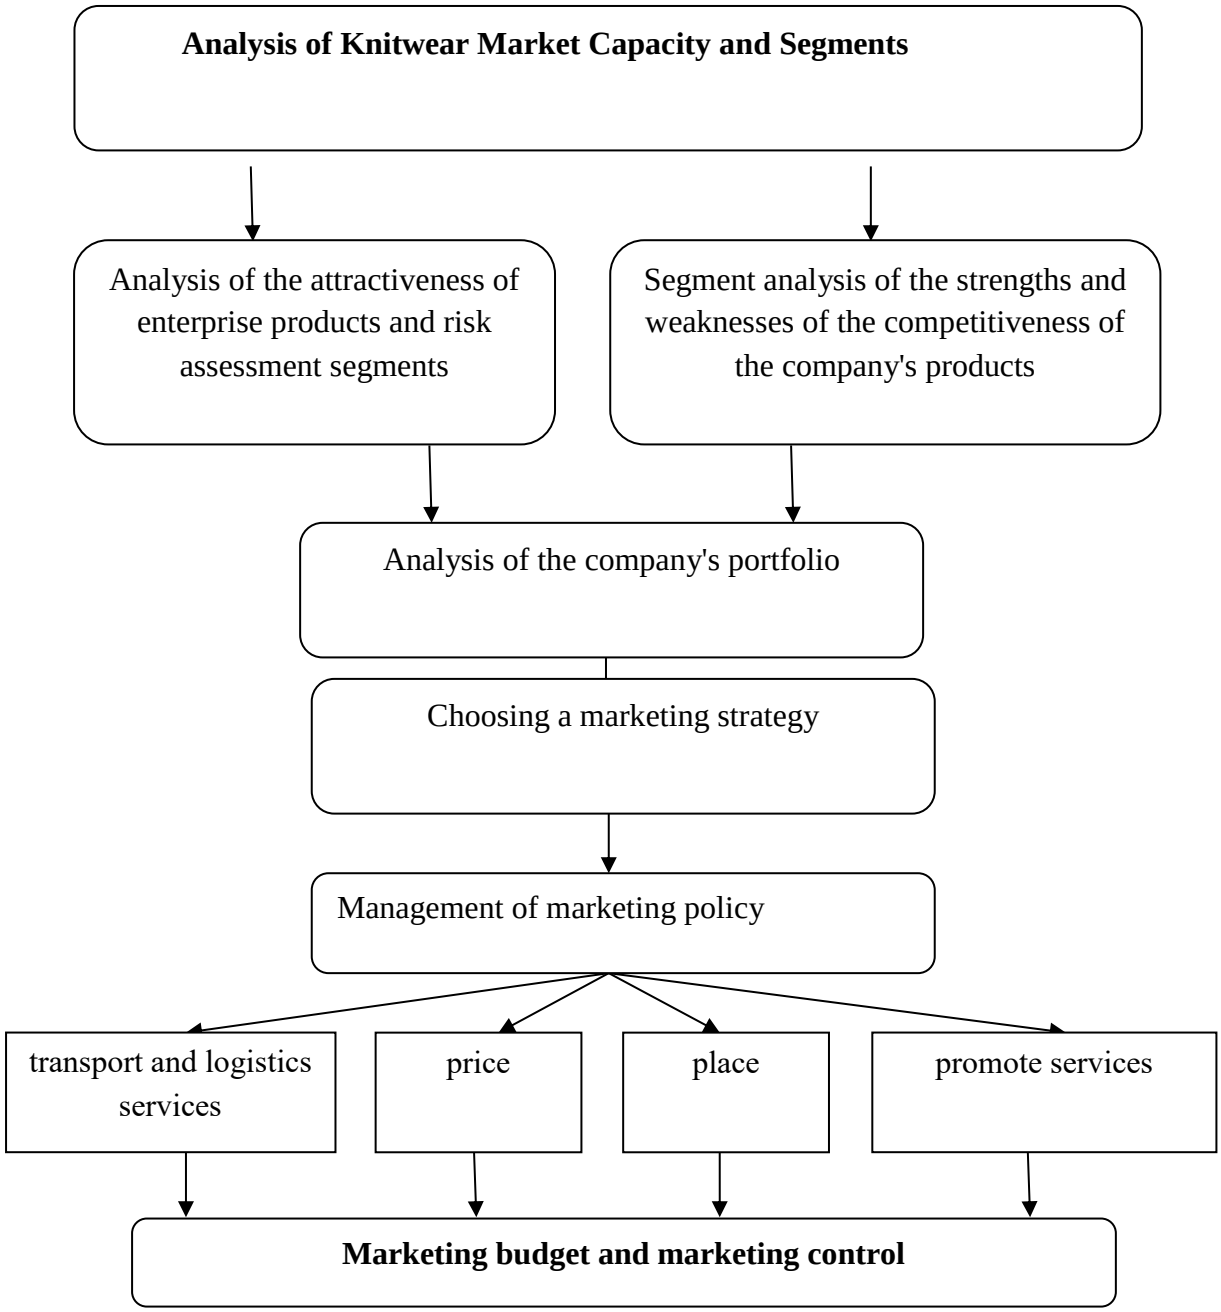

Figure 1.2. Scheme of marketing activities of textile enterprises.

–the degree of novelty of the product;
–the range of products being produced;
–the number of similar goods or substitute goods in this market segment;
- the degree to which it meets the needs of specific buyers in this market segment;
- quality of goods;
- technological complexity;
- the level of requirements for pre-sale and after-sale service;
- the feasibility of standardization or commodity flexibility;
- patent protection and patent purity for new products;

- compatibility of the existing organizational structure of the company with the new production;
- the amount of costs of creating a new product;
- Compulsory product certification in the target market;
- profitability of production and sale of new goods in the target market;
- investment payback period;
- the period of mastering the new assortment and its optimization;
- costs per product etc.

When developing a sales policy, the following are taken into account:

–application to the sales network for this market segment;

–the organizational structure of the company's sales and the number of qualified sales personnel;

–assessment of the company's experience in this market segment;

–assessment of the expediency of using the services of intermediaries;

–opportunities to increase the volume of sales with the help of intermediaries;

–the policy of intermediaries towards the firm;

–availability of financial resources to create a sales system;

–comparative assessment of profitability of personal selling system and alternative offers;

–supply of available goods to the market;

–number of potential customers;

–the nature of the distribution of the order;

–the habits and preferences of end consumers;

–the variability and instability of the product;

–coping efforts of the company's management;

–sales channel control, etc.

When developing a pricing policy, it is necessary to take into account the following:

– choosing a pricing method that meets the firm's capabilities and goals, taking into account competitors' practices;

– price level for one product;

– price dynamics corresponding to the stage of the product's life cycle;

– the price ratio in the assortment (nomenclature) according to the degree of novelty of the goods, differences in quality and technical level;

– price level relationship with competing similar goods in the target market;

– level of elasticity of demand;

– level of functional and pure competition;

– choosing a pricing strategy to launch a new product into the target market;

– service policy, brand popularity, length of sales channel and type of sales intermediaries, delivery conditions, discount system, etc.

3. The "Communication Policy" section recommends dividing the budget among the individual organizers of the product promotion policy and justifying their selection, as well as resolving issues related to communication tools.

When implementing a marketing program and determining a budget, it is important to consider the following:

–the total cost of implementing all marketing measures envisaged in this program;

–market research costs;

–costs of future market forecasting;

–costs of studying the firm's own production and sales capabilities;

–costs for creating a marketing program;

–expenses for salaries of employees of the company's marketing department;

–the costs of paying fees for the services of special marketing and advertising organizations;

–costs of paying fees for the services of commercial intermediaries;

–costs of evaluating the initial and final effectiveness of this marketing program;

–costs for implementing control and monitoring of the marketing program;

–costs for introducing current changes during the implementation of the marketing program, etc.

The marketing mix plays an important role in marketing policy. Today, John Baller has proposed a new, expanded marketing mix, which is called the corporate marketing mix. Model "10R" includes the following elements:

1. philosophy – organizational philosophy-idea;
2. personality – personnel who support the necessary corporate philosophy;
3. people – people;
4. products – goods;
5. prices – prices;
6. place – location;
7. promotion - move;
8. performance - evaluation and execution of enterprise activity;
9. perception – feeling;
10. positioning - positioning.

The marketing mix, in its most common form, includes 4 marketing submixes. These are: product mix, contract mix, communication mix, distribution mix. The product mix forms the product policy and includes measures related to the product. These measures include: design, its decoration, product quality, packaging, customer service, warranty policy, product diversification, assortment policy, etc.

The contract policy implements the agreement of the terms of the act of sale of goods and their formalization in the form of a contract. These measures include: price policy, markup and discount system, terms of goods delivery and payment, as well as credit policy.

The distribution policy implements the delivery of goods from the place of preparation to the recipient. This policy is the justification and analysis of the sales channel, marketing-logistics, sales policy, sales media policy, production force deployment policy. Includes customer and market location policies, delivery policies, finished goods warehousing policies, and more.

It should be noted that the Republic of Uzbekistan is constantly working to increase the export potential of our Republic by creating benefits for exporters of goods.

In the near future, an important factor for strengthening the export potential of our Republic is the strengthening of economic stimulation, export support by the state.

Conclusion. Today, a number of tax incentives aimed at state support of exporting enterprises are provided. A regressive scale of taxation has been introduced depending on the share of exports in relation to the volume of sales of goods.

The share of export in the total volume of product sales: if it is from 15% to 30%, the rate is 30%; Above 30%, the rate is halved.

Property tax for exporting enterprises is also carried out depending on the share of exports in the total volume of products: from 15% to 25% - the rate is reduced to 30%. From 25% to 50% - the rate is reduced by 50%; If it is more than 50% - property tax is not charged.

Value-added tax is levied at the lowest rate on exports. Value-added tax on material and technical resources required for the production of exported products can be paid in a 90-day interest-free deferral.

Implementation of credit financial support for national exporters is carried out in the following directions:

- creation of effective conditions of promotion of commercial banks financing export operations accepted in international practice;

- improvement of the existing mechanism of social protection of national exporters and commercial banks financing exports;

- providing investment insurance;

- One of the main obstacles to exporting products is that the products produced do not meet international requirements for certification and standardization.

The second of the conditions for the effectiveness of the national export policy is to fulfill the following conditions that allow to increase the export potential of our country:

- training and retraining of national personnel;

-development and implementation of optimal and effective conditions for marketing research that will allow identifying and developing new product markets;

-actively accelerate exports through the development of foreign trade infrastructure;

- introduction of advanced methods of export policy tactics and strategies of developed countries;

- development of a modeling system to determine the short-term and long-term perspectives of the state and dynamics of the parameters of the commodity markets in the main areas of the export activity of our republic;

-develop a strategy for developing new transport corridors in order to increase the efficiency of domestic transport infrastructure and diversify export and import cargo;

-reducing the cost of transporting export-import cargo through the development of infrastructure and the creation of a logistics system, as well as cargo processing on the territory of the republic and at major international seaports;

-Improving the development of the contractual and legal framework for cooperation with foreign countries in trade, investments, development of new transport corridors, and transit of goods;

CONSTRUCTING A STRATEGY FOR BUSINESS DEVELOPMENT

Akmalov Shokhjakhon Farhod ugli
A third-year student at the University of Sunderland (MDIST), an independent researcher, and an assistant coordinator at the MDIST Business Incubator.
https://doi.org/10.5281/zenodo.14777112

Abstract. *In an increasingly competitive and dynamic business environment, constructing a robust business development strategy is essential for long-term growth and sustainability. This article explores the key components and processes involved in formulating an effective strategy, including market analysis, identifying growth opportunities, and aligning organizational resources with strategic goals. A central focus is placed on the integration of marketing and sales departments, highlighting how a collaborative approach between these functions can enhance lead generation, customer acquisition, and revenue growth. By incorporating competitive intelligence, customer-centric approaches, and innovation, businesses can develop a flexible and adaptive strategy that responds to evolving market demands. Additionally, the role of leadership, strategic partnerships, and continuous evaluation are examined in driving successful business development. Practical frameworks and examples are provided to guide organizations in constructing a strategy that enhances both profitability and market positioning.*

Keywords: *drive business, a small sense of satisfaction, differ in their responsibilities, a prospective consumer, market research, brand loyalty, effective communication, persuasive skills, data-driven decisions, competitive advantage, integration, a balance in labor and finance, engine of the success, standalone activities, rigid processes, embrace creativity, achieving sustainable growth, positive pressure, recognizing achievements, a supportive environment.*

Introduction

Marketing and sales teams rely heavily on one another to drive business. After all, the marketing department generates leads, and the sales team converts those leads to paying customers. (Shahid, 2023)

In the 21st century, the conduct and development of business have significantly changed, since it has affected the structure of the business model and its departments. Some companies limit their profit as soon as they get their revenue instead of investing it in sales and marketing departments to increase their profit. Of course, it does not apply to large companies. This is mostly about medium and small-sized businesses taking the first step towards expanding their business. These types of companies have stopped expanding or developing because of a small sense of satisfaction with their income.

Two important aspects of business development.

Business is a mechanism with gears where you always need to add oil to make it work longer and better. The gears are departments that deal with business development. In our case, it is the marketing and sales department. Oil is the financial support for these departments to increase profits. The main task of these departments is to introduce the company to customers so that they eventually become permanent or buy more products. In addition, the departments here differ in their responsibilities, the marketing department is responsible for the overall appearance of the

company, but the sales department is the language of the company, as good as it is, there will be more sales.

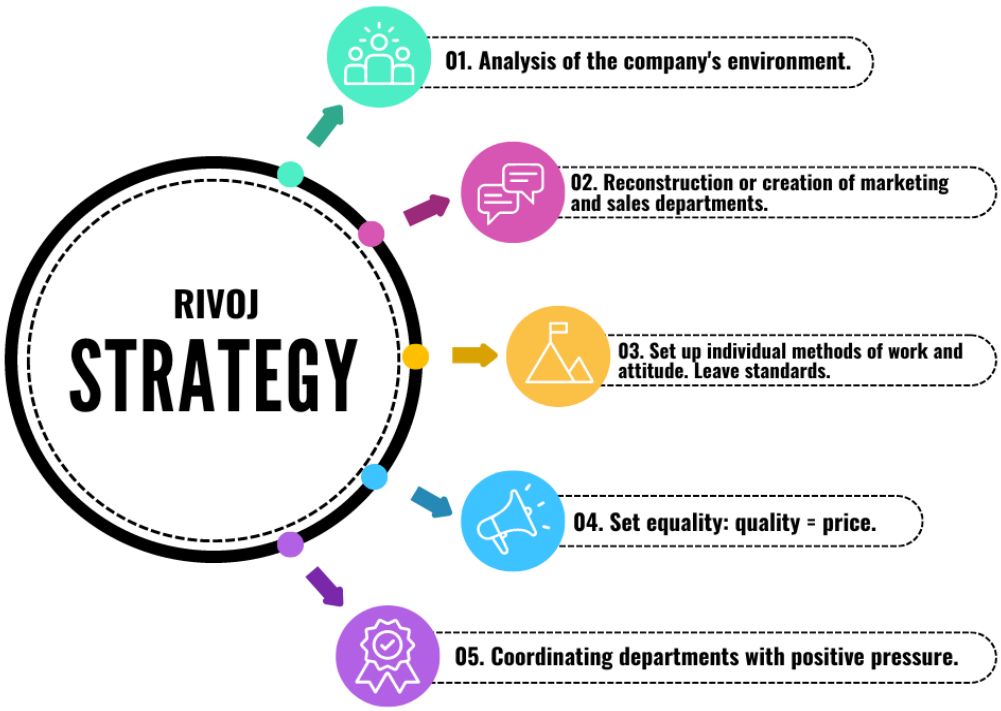
Marketing encompasses every part of a plan to turn a prospective consumer into a happy and satisfied customer. It includes everything from market research to advertising. The goal of marketing is to convince a person that your product is worth investing in, establish brand loyalty and increase overall sales. (Snyder, 2023) Sales are a fundamental aspect of the business. Thus, understanding what sales are becoming essential in gaining clarity on the activities and processes involved in selling products or services to customers. It is a dynamic field that requires effective communication, persuasive skills, and an understanding of customer needs and motivations. (TheKnowledgeAcademy, 2023)

Constructing a strategy for marketing and sales departments to drive business growth.

The statement "Constructing a strategy for marketing and sales departments to drive business growth" emphasizes the strategic importance of aligning these two functions to enhance overall business performance. Integrating marketing and sales fosters collaboration, improves efficiency, and ensures a unified customer experience, all of which are critical for driving revenue growth. This approach helps businesses better target new markets, make data-driven decisions, and gain a competitive advantage. Ultimately, the integration of these departments supports sustained business growth by enabling companies to respond more effectively to market changes and customer needs.

The development that includes integrating is a simple way to boost income because sometimes you should integrate two things to achieve a good outcome. For instance, in life, you can integrate your study with a part-time job like a theory with practice. In this case, you get valuable skills, which can bring you a balance in labor and finance.

The ***"RIVOJ"*** strategy was constructed from my own experience, and it includes solutions for most challenges I faced when was working in the sales and marketing departments of some



companies. The strategy "RIVOJ," derived from the Uzbek language meaning "development," embodies a forward-looking approach to business growth and progress. So, let us consider 5 points of this strategy to achieve business development:

Analysis of the company's environment.

When you start your journey in a new company as the head of a department or specialist, first look at the atmosphere and condition of your workplace. The reason for that workspace is one of the main engines of success. For example, you come to the company and start adapting to that atmosphere that the company has had for a long time. However, it does not mean that you have to be fully adapted to this atmosphere, sometimes you should adapt to the company under yourself and then without the pressure you can achieve some good results in your workspace.

Reconstruction and creation of marketing and sales departments.

As I mentioned before, marketing and sales departments are the important keys to opening the door to success, which is why every businessperson should deal with them to achieve their goals. What would happen if there were no such departments? It is easy to see marketing and sales as standalone activities, but they are inextricably connected to each other. Without a solid marketing effort, even the best product will not sell. Without profitable sales, the company will not be in business long enough to build a marketing department or pay its employees. Put another way, there can be no sales without marketing and no marketing without sales. This may seem obvious, but a surprising number of business owners and company executives fail to grasp this simple concept. (Prager, 2015)

Set up individual methods of work and attitude. Leave standards.

Encourage individual work styles by focusing on outcomes rather than rigid processes. Empower your team to develop their methods, embrace creativity, and adapt to challenges, while maintaining clear goals and expectations. This approach fosters innovation and personal growth, moving away from one-size-fits-all standards.

Set equality: quality = price.

The price-quality relationship refers to the correlation between the price of a product and its perceived quality by customers. In general, customers often associate higher price points with higher quality, assuming that a more expensive product is of better quality than a cheaper one. (www.simon-kucher.com, 2024)

Quality and price are critical in business development as they define a company's value proposition. High quality fosters customer satisfaction, loyalty, and brand reputation, while strategic pricing ensures competitiveness and profitability. Balancing these factors is key to attracting the right customers and achieving sustainable growth.

Coordinating departments with positive pressure.

Coordinating departments with positive pressure involves encouraging collaboration and accountability through motivation rather than stress. This can be achieved by setting clear goals, recognizing achievements, and fostering a supportive environment where departments feel driven to perform well, not out of fear, but from a shared commitment to success. Positive pressure inspires teams to excel while maintaining a healthy and cooperative atmosphere.

Conclusion

In conclusion, constructing an effective business development strategy requires a holistic and integrated approach that brings together key departments, including marketing and sales, to foster collaboration and align goals. The strategic framework presented in this article offers a

pathway for businesses to remain competitive, agile, and responsive to market changes. By continually evaluating performance, refining processes, and leveraging innovation, organizations can sustain long-term growth and secure a strong market position. The success of any strategy hinges on a combination of sound leadership, strategic partnerships, and the ability to adapt to both internal and external factors shaping the business landscape.

BRIDGING THE EDUCATION–EMPLOYMENT GAP: A REVIEW OF EMPLOYERS' PERCEPTIONS OF GRADUATE WORK READINESS IN UZBEKISTAN

Karimova Dilfuza Khatamjonovna
Oxus University
Westminster International University in Tashkent
https://doi.org/10.5281/zenodo.14842533

Abstract. *This review paper explores employers' perceptions of graduate work readiness in Uzbekistan, drawing on reports from international organizations and local projects (ADB, GIZ, YES). The review identifies persistent skill gaps—both technical and soft—that hinder effective school-to-work transitions. Employers emphasize practical training, modernized curricula, and stronger partnerships with educational institutions to better align graduate competencies with market demands. The analysis reveals that while theoretical knowledge is often sufficient, practical experience and adaptable skills remain underdeveloped. Initiatives such as TexVET by GIZ and policy recommendations by the World Bank aim to reform vocational education, enhance employability, and ensure sustainable employment outcomes. This review offers insights for policymakers, educational leaders, and industry stakeholders seeking to bridge the education–employment gap and improve work readiness among new graduates.*

Keywords*: Work readiness, graduate employability, skill gaps, labor market, employer perceptions*

Introduction

Work readiness is a key determinant of successful employment for new graduates. It encompasses a wide spectrum of skills that enable individuals to perform effectively upon hire and maintain their employability over time. Confidence in technical tasks, along with strong communication, decision-making, and organizational abilities, helps graduates contribute continuously to organizational growth. In turn, work readiness influences new hires' prospects for advancement and financial incentives, further fueling motivation.

Employers prioritize graduates who are "work ready," as these individuals can contribute immediately to organizational goals. This reduces essential resource expenditures—time, training, and budget—on the employer's side. Various studies highlight the importance of diverse skill sets, particularly communication, adaptability, and the ability to foster positive work environments. In rapidly changing markets, employees must quickly adjust to new technologies, tasks, and communication modes, preserving customer trust and strengthening organizational performance.

This study reviews reports from international organizations to understand how employers in Uzbekistan perceive new graduates' work readiness. It also examines peer-reviewed research from journals on the expectations placed upon new graduates during the school-to-work transition. By analyzing recent data, this report aims to provide updated insights into employer expectations. The findings can inform government agencies and educational ministries on the importance of stronger collaboration between educational institutions and the labor market—an approach that includes designing more labor market–oriented curricula, improving teacher training, upgrading schools' technical resources, and involving industry experts in curriculum development.

Work Readiness and Employability

Work Readiness. Scholars propose varying definitions of "work readiness" (WR). Mason et al. (2009) define WR as the "possession of the skills, knowledge, attitudes, and commercial understanding that enable new graduates to make productive contributions to organizational objectives soon after commencing employment." Similarly, Caballero et al. (2011) regard WR as a subset of employability, emphasizing the individual's perceived level of skills and attitudes that facilitate success at work. Borg (2023) refines this further by describing WR as attributes that help graduates transition smoothly into the workplace.

Additional studies (e.g., Okolie, 2022; Peersia, 2024) underline the importance of aligning graduates' skill sets with employer needs, noting that discipline-specific technical knowledge must be supplemented by readiness skills. Borg (2020) captures the breadth of WR by identifying a mix of values, behaviors, and skills that—together with technical expertise—enable a successful workplace transition. Given that not all university graduates achieve work readiness, those who do possess such attributes can be seen as valuable resources in the labor market.

Employability. Employability, though related, is broader than WR. It involves the capacity to "find, create, and sustain meaningful work" across different contexts and throughout one's career (Bennett, 2020), supported by ongoing skill development (Oliver, 2015). Yorke (2004) frames graduate employability as a combination of achievements—knowledge, personal attributes, and skills—that empower graduates to secure and thrive in a chosen profession. Similarly, Wahab (2024) highlights diverse skills and attributes necessary for professional success.

Liu (2024) focuses on the regional economic implications of employability, suggesting that improving education quality and skill acquisition enhances the overall workforce. Dacre-Pool, Qualter, and Sewell (2014), along with Jackson and Chapman (2012) and Rothwell and Rothwell (2016, as cited in Ian P. Herbert, 2020), argue that a graduate's employability is determined by matching employer requirements (role specifications) and the individual's potential for a sustainable career and effective life management.

Employers' Expectations of Work Readiness.

From the perspective of matching theory, work readiness is achieved when graduate competencies align with employer requirements (Borg, 2020). Employers gain significantly when graduates contribute effectively to the workplace and face losses when new hires lack necessary skills (Borg et al., 2019). In Borg's (2020) qualitative study, employers observed strengths such as meeting leadership, verbal communication, professional conduct, and technological skills among new hires. Weaknesses included limited confidence in open communication, reluctance to ask for help, and difficulty handling conflict.

Employers also recognized their responsibility to mentor and train graduates, stressing that the absence of practical work experience often resulted in negative job application outcomes. Stronger partnerships with educational institutions were recommended to align graduate skill sets with industry needs, benefiting both stakeholders. Sersmuk (2014) similarly underscores the importance of fundamental skills (e.g., numeracy), personal management (e.g., responsibility, adaptability), and teamwork (e.g., collaboration) for organizational efficiency.

Methods

To identify the skills that employers in Uzbekistan consider essential for new hires, we analyzed reports from international organizations and local projects. Four reports were selected out of 10 based on their relevance to our research focus: employers' expectations of new graduates.

These reports provide valuable insights into employer demands, the skill gaps among new graduates, and employer recommendations for bridging the gap between labor market needs and educational outcomes.

Results

ADB Report on TVET Graduates

The Asian Development Bank (ADB) supports the development and modernization of Uzbekistan's technical and vocational education and training (TVET) sector. Its report examines the current state of TVET, analyzing the impact of recent reforms and global trends on workforce preparation. The study highlights a significant skills mismatch, with over 30% of TVET graduates employed below their qualification level and only half considered adequately prepared by employers. To bridge this gap, employers recommend:

- **Increased practical training** – a stronger emphasis on hands-on learning, industry placements, and skill application.
- **Modernized curriculum** – integration of new technologies, digital literacy, and ethical considerations to align training with industry demands.
- **Industry-specific competencies** – specialized training tailored to sectoral needs, ensuring graduates possess relevant technical expertise.
- **Essential soft skills** – communication, teamwork, intercultural awareness, and ethical decision-making are highly valued.
- **Critical thinking and adaptability** – employers stress the importance of creativity and problem-solving in a rapidly evolving job market.

Overall, the report underscores the need for TVET curricula that combine strong technical training with practical exposure and soft skills development.

GIZ Project: Reforming Uzbekistan's Vocational Education System

The German Agency for International Cooperation (GIZ) leads the **"Support of the Reform and Modernization Process in the Vocational Education System of Uzbekistan" (TexVET)** project, aiming to improve employability and income opportunities. The project emphasizes a **structured, multi-stakeholder approach** to vocational education reform, ensuring better alignment between training programs and labor market needs. Its key initiatives include:

- **Strengthening the VET system** – enhancing vocational training to meet industry standards.
- **Stakeholder collaboration** – bringing together policymakers, employers, and educators to define training priorities.
- **Regulatory improvements** – developing a modernized legal framework for vocational education.
- **Institutional partnerships** – establishing joint training programs and dual learning models between businesses and educational institutions.

By fostering stronger cooperation between education providers and industries, the GIZ project seeks to create a more responsive vocational education system that effectively prepares graduates for Uzbekistan's evolving labor market.

YES Project and World Bank Findings on Employer Expectations

The **Youth Employment Services (YES) project** and **World Bank reports** provide further insights into the challenges employers face in hiring skilled graduates. The findings

indicate that **formal education often lacks practical relevance**, leaving graduates underprepared for workplace demands. Key issues identified include:

- **Overemphasis on theory** – many graduates possess academic knowledge but lack practical skills.
- **Insufficient work experience** – despite mandatory internships, 53% of employers reject youth applications due to inadequate real-world training.
- **General and technical skill deficits** – a third of companies cite a lack of essential workplace skills as a major hiring constraint.
- **Mismatch between credentials and competencies** – only 16% of employers consider low education levels a problem, suggesting that **the issue lies in skill application rather than degree attainment**.

The World Bank emphasizes that skill gaps **hinder employment prospects and wage growth**, particularly in Uzbekistan's formal sector. Employers value cognitive and non-cognitive skills, yet many job seekers remain under-skilled or inactive. Addressing these deficiencies requires stronger industry-academia collaboration and curriculum reforms that prioritize practical training and workplace readiness.

Conclusion

Collectively, these studies underscore the critical importance of aligning educational programs with employer needs to enhance graduate work readiness. Employers consistently highlight technical proficiency, practical experience, and soft skills—particularly communication, teamwork, and adaptability—as pivotal for immediate and sustained success. Projects like those spearheaded by GIZ and the World Bank demonstrate growing efforts to reform vocational education and training in Uzbekistan, aiming to bridge the gap between formal education and the evolving demands of the labor market. Strengthening partnerships between educational institutions and industries will be essential to ensuring that future graduates enter the workforce with the competencies required for both individual and organizational success.

Kalit so‘zlar: *buxgalteriya hisobi, bozor iqtisodiyoti, audit, iqtisodiy tahlil.*

Ключевые слова: *бухгалтерский учет, рыночная экономика, аудит, экономический анализ.*

Ma’lumki mamlakatimizda o‘tkazilayotgan iqtisodiy-ijtimoiy islohatlar muvaffaqiyati, turli turdagi ishlab chiqarish tarmoqlarining buxgalteriyasi, mamlakatimizda olib borilayotgan iqtisodiy islohotlarda buxgalteriya hisobi va hisobotini mustaqil fan hamda amaliyotda kompaniyalar boshqaruvining muhim bo‘g‘inlaridan iborat. Iqtisodiyotimizning barcha jabhalarida bo‘lgani kabi, buxgalteriya hisobiga aloqador ulkan o‘zgarishlar va yangiliklar sodir bo‘ldi. Keyingi 10 yillar mobaynida xalqaro standartlarga to‘la-to‘kis javob beruvchi buxgalteriya hisobi tizimini yaratish borasida bir qancha islohotlar olib borilmoqda. Buxgalteriya hisobidan foydalanuvchilar doirasi ancha kengayib borayotganligi, integratsiya jarayonlari chuqurlashayotganligi, qo‘shma korxonalar barpo etilayotganligi, jahon moliya bozoriga chiqilayotganligi sarmoyalar, ishchi kuchi va valyutaning ayrim mamlakatlar o‘rtasida erkin harakatlanishi zarurligi buxgalteriya hisobi tizimini jahon standartlariga ko‘chirishni yanada qattiqroq talab qilmoqda.

Buxgalteriya tushunchasi o‘zining qadimiy tarixiga ega “Buxgalter” atamasi nemis tilidan tarjima qilganda ”buck-kitob” “halter-tutish” so‘zlarining birikmasi bo‘lib, kitob tutuvchi degan ma’noni anglatadi. Ingliz tilida so‘zlashadigan mamlakatlarda buxgalteriya hisobi “accounting” deb yuritiladi. Buxgalteriya hisobida har qanday xo‘jalik operatsiyasi bo‘yicha tegishli tarzda tuzilgan, barcha zarur ko‘rsatkichlarga ega bo‘lgan, mas’ul shaxslar tomonidan imzolangan va tasdiqlangan hujjat tuzilishi kerak. Buxgalteriya hisobi - har qanday mulkchilik shaklidagi korxona xo‘jalik faoliyatini yalpi, uzluksiz kuzatish va nazorat qilish, sodir bo‘lgan voqea-hodisalarni hisob registrlarida qayd qilish, ularga ishlov berish hamda hujjatlarga asoslangan holda moliyaviy hisobot ko‘rinishida axborotlarni foydalanuvchilarga taqdim qilish tizimidir.

Buxgalteriya hisobi-korxonalar, tashkilotlar va muassasalar faoliyatini aks ettiruvchi axborot tizimi bo‘lib, u asosiy uchta maqsadni o‘z ichiga oladi:

1. Moliyaviy hisob – korxonaning moliyaviy natijalarini aks ettiruvchi hisobotlarni tayyorlash.

2. Menejment hisobi – rahbariyat uchun zarur bo‘lgan tahliliy ma’lumotlarni taqdim etish.

3. Soliq hisobi – soliq organlari oldidagi majburiyatlarni hisoblash va to‘lashni nazorat qilish.

Buxgalteriya hisobi tamoyillari Buxgalteriya hisobi quyidagi asosiy tamoyillarga asoslanadi:

1. Uzluksizlik – tashkilot faoliyati davomiy bo‘lishi ko‘zda tutiladi.
2. Haqiqiylik – har qanday operatsiya hujjatlar bilan tasdiqlangan bo‘lishi kerak.
3. Shaffoflik – moliyaviy natijalar aniq va ishonchli bo‘lishi lozim.
4. Qiyosiylik – moliyaviy ko‘rsatkichlar vaqt o‘tishi bilan tahlil qilinishi kerak.

Buxgalteriya tenglamalari moliyaviy ma’lumotlarning to‘g‘riligi va yaxlitligini ta’minlashga yordam beradi. Ular, shuningdek, hisob balansini ta’minlash muhim vazifa bo‘lgan audit va moliyaviy tahlillarda muhim rol o‘ynaydi. Buxgalteriya hisobi tenglamalarini o‘zlashtirish barcha buxgalterlar uchun juda muhimdir.

Buxgalteriya hisobining asosiy elementlari

1. Buxgalteriya hisobining uchta asosiy elementi mavjud:
2. Aktivlar – korxonaning moliyaviy va moddiy boyliklari.
3. Majburiyatlar – kreditorlar va boshqa tomonlar oldidagi qarzlar.
4. Kapital – korxona egalari tomonidan kiritilgan mablag‘ va foyda.

Auditning mohiyati - bozor iqtisodiyoti sharoitida uning obyektiv iqtisodiy taraqqiyot qonunlari, kategoriyalari, xalqaro hamjamiyatda tan olingan hamda ayrim olingan bir konkret mamlakatda amal qilayotgan me'yoriy hujjatlarning talablariga mos tekshiruv obyektida uning barcha faoliyatlari raqamlar yordamida ifodalangan, Korxonalar orqali, moddiy va nomoddiy ne’matlar yaratiladi, turli ishlar bajariladi,
xizmatlar ko‘rsatiladi hamda ular iste’molchilarga yetkazib beriladi.

Korxonalar sonini ko‘paytirish, ularni birlashtirish, yiriklashtirish, hamkorlikdagi faoliyat turlarini rivojlantirish mamlakat yalpi ichki mahsuloti hajmini oshirish, aholini ish bilan ta’minlash va daromadini oshirish, odamlar hayot darajasi va farovonligini yuksaltirishning muhm omillaridan biri bo‘lib hisoblanadi. Korxonalarni qayta tashkil etishni amalga oshirish sharoitida buxgalteriya hisobini yuritish va moliyaviy hisobotni shakllantirish ma’lum tartib-qoidalarga amal qilishni taqoza etadi. Bunday tartib qoidalar har bir davlatning tegishli qonunlari va qonunosti hujjatlarida, shuningdek qo‘llanilishi tan olingan xalqaro standartlarda belgilangan.

Bozor iqtisodiyotiga o‘tish buxgalteriya kasbining g‘oyatda mahsuliyatli va mashaqqatli yekanligini ko‘rsatmokda. Buxgalteriya kasbining sharafli va mashaqqatli kasb ekanligini tarixga bir nazar tashlash orqali ham sezish mumkin. Tarixiy manbaolardan ma’lumki hisobi ishlari taxminan eramizdan 4000 yil ilgari qo‘ldorlik jamiyati negizida, uning xo‘jalik faoliyati talablari asosida yuzaga kelgan32. Ijtimoiy bosqichlarning o‘zgarib borishi natijasida hisob obekti ham almashib turgan va dastlab foydalanilgan hisob uslubi bo‘lgan inventarizatsiya, kontakorrent usuli bilan, ya’ni, xo‘jalik jarayonida shaxslar orasidagi hisob-kitoblarni olib borish bilan to‘uldirilgan

Xulosa

Xulosa o‘rnida shuni aytib o‘tish joizki, Buxgalteriya sohasini yaxshi tushunish va buxgalteriya hisobidagi tenglamalarni o‘zlashtirish har qanday buxgalter yoki moliya mutaxassisi

uchun juda muhimdir. Ular kompaniyaning moliyaviy holatini tushunish uchun asos yaratadi va barcha moliyaviy operatsiyalar to‘g‘ri hujjatlashtirilishi va hisobot qilinishini ta’minlaydi.

INNOVATSIYALARNI BOSHQARISH HAQIDA UMUMIY TUSHUNCHALAR

Abdullayev Baxodir
Andijon mashinasozlik instituti, Ph.D., doktorant
https://doi.org/10.5281/zenodo.14842603

Annotatsiya. *Innovatsiyalarni boshqarish zamonaviy iqtisodiyotda asosiy omillardan biri hisoblanadi. Ushbu tadqiqot innovatsion menejmentning nazariy asoslarini, uning tashkilotlar va jamiyatga ta'sirini o'rganishga qaratilgan. Tadqiqot davomida innovatsiyalarni boshqarish jarayonlari, ular bilan bog'liq strategiyalar va ularning iqtisodiy samaradorligi tahlil qilinadi. Shuningdek, tadqiqot innovatsion madaniyatni shakllantirish va uni rivojlantirishga qaratilgan dolzarb yondashuvlarni o'rganadi. Innovatsiyalarni samarali boshqarish biznesning o'sishi va raqobatbardoshligini oshirishga yordam beradi. Ushbu ishda innovatsiyalarni joriy etish usullari, ularning tijoratlashtirish jarayonlari va zamonaviy texnologiyalar asosida raqamli transformatsiya jarayonlarining roli muhokama qilinadi. Tadqiqot natijalari innovatsion menejment sohasida samarali strategiyalar ishlab chiqishda foydalanish uchun muhim ahamiyatga ega.*

Kalit so'zlar: *innovatsion menejment, raqobatbardoshlik, strategik menejment, raqamli transformatsiya, ijodiy muhit, tijoratlashtirish, samaradorlik.*

Kirish.

Innovatsiya - bu yangi g'oyalar, tovarlar yoki xizmatlarni joriy etish va mavjudlarini takomillashtirish jarayoni. Innovatsiyalarni boshqarish ijodkorlikni rivojlantirish, yangi g'oyalarni yaratish va baholash hamda ularni muvaffaqiyatli bozorga chiqarish uchun amaliyotlar, strategiyalar va vositalar to'plamini o'z ichiga oladi. Innovatsiyalarni boshqarish - bu ijodkorlik va strukturalangan jarayonlar o'rtasidagi muvozanatni talab qiladigan muhim jarayondir [1]. Bu moddiy, professional va inson resurslari yordamida odamlar innovatsiyalar yaratish uchun sharoit yaratishni o'z ichiga oladi. Jamiyat a'zolari innovatsiyani innovatsiya madaniyati va o'z-o'zini tartibga solishni talab qiluvchi murakkab jarayon sifatida ko'rib, yangi istiqbolni joriy qiladi [2]. Innovatsiyalar foydali o'sishning muhim omili va kelajagimiz kalitidir. Bu bizga kelajakdagi muammolarni hal qilish va barqaror rivojlanishni ta'minlash imkonini beradi. Yangi g'oyalarni bozor muvaffaqiyatiga aylantirish uchun innovatsiyalarni boshqarish ikkita hal qiluvchi omilni muvozanatlashi kerak: bir tomondan ijodkorlik uchun joy va boshqa tomondan aniq tuzilgan jarayonlar. To'g'ri asosiy ko'rsatkichlarni tanlash samaradorlikni baholash uchun hal qiluvchi asosdir. Innovatsiyalar bilan bog'liq muammolar murakkablashib borar ekan, kompaniyalar ochiq innovatsion jarayonlarga ko'proq moyil bo'lib, akademik doiralar hamda mijozlar bilan hamkorlik qilmoqdalar. O'zlarining innovatsion kuchlarini oshirish uchun kompaniyalar o'z tashkilotlarida innovatsiya madaniyatini o'rnatishlari kerak. Ular, shuningdek, jamiyatda innovatsiyalar uchun qulay muhit yaratishga hissa qo'shishlari kerak [3]. Tadqiqotda innovatsion menejmentning nazariy asoslari va amaliy tatbiqlari o'rganildi. Zamonaviy iqtisodiy tendensiyalar shuni ko'rsatadiki, innovatsiyalarni samarali boshqara olgan tashkilotlar yuqori natijalarga erishadi. Shu sababli, tashkilotlar innovatsion jarayonlarni o'z ichiga olgan strategiyalar ishlab chiqishi lozim.

Ushbu tadqiqot innovatsion menejment modelini tahlil qilish va uni turli sohalarga tatbiq qilish imkoniyatlarini o‘rganishga qaratilgan.

Mavzuga oid adabiyotlar tahlili.

Innovatsiyalarni boshqarish sohasi global miqyosda keng o‘rganilgan bo‘lib, ko‘plab tadqiqotlarda ushbu jarayonning iqtisodiy va ijtimoiy jihatlari ko‘rib chiqilgan. Dodgson [4] innovatsion menejment tamoyillarini ishlab chiqib, ularning kompaniyalar muvaffaqiyatiga ta’sirini tahlil qilgan. Afeltra [5] esa barqaror innovatsiyalarni boshqarish strategiyalarini o‘rganib, atrof-muhitga ta’sirini ko‘rsatgan. Shu bilan birga, Asiamah [6] innovatsiyalar jarayonining xarajat va foyda munosabatini o‘rgangan.

Innovatsiyalar klassik ravishda iste’molchilar uchun qiymatni oshirishga va ishlab chiqarishning shaxsiy xarajatlarini kamaytirishga qaratilgan. Ammo firmalar tovarlar va xizmatlar ishlab chiqarish va ulardan foydalanishning ekologik va ijtimoiy jihatlarini hisobga olgan holda qiymat va xarajatlarni aniqlash usullarini tobora kengaytirmoqda. Barcha tovarlar va xizmatlar ishlab chiqarish va iste’mol qilish jarayonida tabiiy resurslar va ekologik xizmatlarni iste’mol qilganligi sababli ekologik va ijtimoiy xarajatlar va ular bilan bog‘liq xavflarga ega. Bu innovatsiyalarni boshqarishga ham tegishli. Atrof-muhit va ijtimoiy tashqi omillarni hal qilish uchun innovatsiyalarni qo‘zg‘atuvchi oddiy rag‘batlarning bir nechtasi mavjud. Bu shuni anglatadiki, firmalar an’naviy ravishda ushbu paydo bo‘lgan muammolarni hal qilish uchun strategiyalar, tuzilmalar, resurslar va imkoniyatlarni ishlab chiqmagan. Klassik tarzda, hukumatlar jamoat manfaatlarining himoyachisi bo‘lib xizmat qilgan va toza havo va xavfsiz suv yoki turlarni, o‘rmonlarni yoki iqlim tizimini himoya qilish kabi jamoat tovarlarini ta’minlash uchun firmalarning xatti-harakatlarini tartibga solgan.

Ushbu qoidalarning aksariyati texnologiyaga asoslangan (subsidiyalar, standartlar, taqiqlar) va shuning uchun ular firmalar tomonidan innovatsiyalar va yangi texnologiyalarni o‘zlashtirishga ta’sir ko‘rsatdi [7]. Bugungi tez o‘zgaruvchan biznes muhitida innovatsiyalarni boshqarish tashkilotlarning raqobatbardoshligi va dolzarbligini saqlab qolishlari uchun juda muhimdir. Bu kompaniyalarga mijozlar va bozorning o‘zgaruvchan ehtiyojlariga javob beradigan yangi mahsulotlar, xizmatlar va biznes modellarini ishlab chiqish imkonini beradi [8]. Innovatsion menejment menejerlarning malakasini oshirish va tashkilotdagi barcha imkoniyatlardan optimal foydalanish uchun asosdir [9]. Bu, shuningdek, inqirozga qarshi boshqaruv vositasi bo‘lib, kompaniyalarga inqirozlarni yengib o‘tish va barqaror rivojlanishni rag‘batlantirishga yordam beradi [10].

Innovatsion faoliyat zamonaviy korxonalar uchun juda muhim, chunki bu ularga zamon bilan hamnafas bo‘lish va raqobatbardoshlikni oshirish imkonini beradi. Yangi uskunalar, texnologiyalar va tashkiliy innovatsiyalarni joriy etish va ulardan foydalanish orqali kompaniyalar o‘zlarining umumiy raqobatbardoshligini saqlab qolishlari va mustahkamlashlari mumkin. Shu sababli, innovatsiyalarni boshqarish bugungi biznes landshaftida muvaffaqiyatga erishish va o‘sishda muhim rol o‘ynaydi. Ushbu tadqiqotlar shuni ko‘rsatadiki, innovatsiyalarni samarali boshqarish uchun kompaniyalar aniq strategik yondashuvlarni ishlab chiqishlari va moslashuvchan menejment tamoyillaridan foydalanishlari lozim. Lekin innovatsiyalarni boshqarishning milliy xususiyatlari, innovatsion menejmentning raqamli ekotizimdagi o‘rni ko‘rib chiqilmagan.

Tadqiqot metodologiyasi.

Tadqiqotda innovatsiyalarni boshqarish jarayonlarini chuqur o‘rganish maqsadida bir nechta metodlardan foydalanildi. Birinchi navbatda, ilmiy adabiyotlar tahlil qilinib, innovatsion menejment bo‘yicha ilg‘or tadqiqotlar o‘rganildi. Shuningdek, korxonalar tomonidan qo‘llanilayotgan innovatsion strategiyalar amaliy misollar asosida tahlil qilindi. Tadqiqot davomida sifat va miqdoriy tahlil usullari qo‘llanilib, innovatsiyalarni boshqarish natijalari baholandi. Barcha yig‘ilgan ma’lumotlar zamonaviy tahlil usullari asosida qayta ishlanib, ilmiy xulosalar chiqarildi.

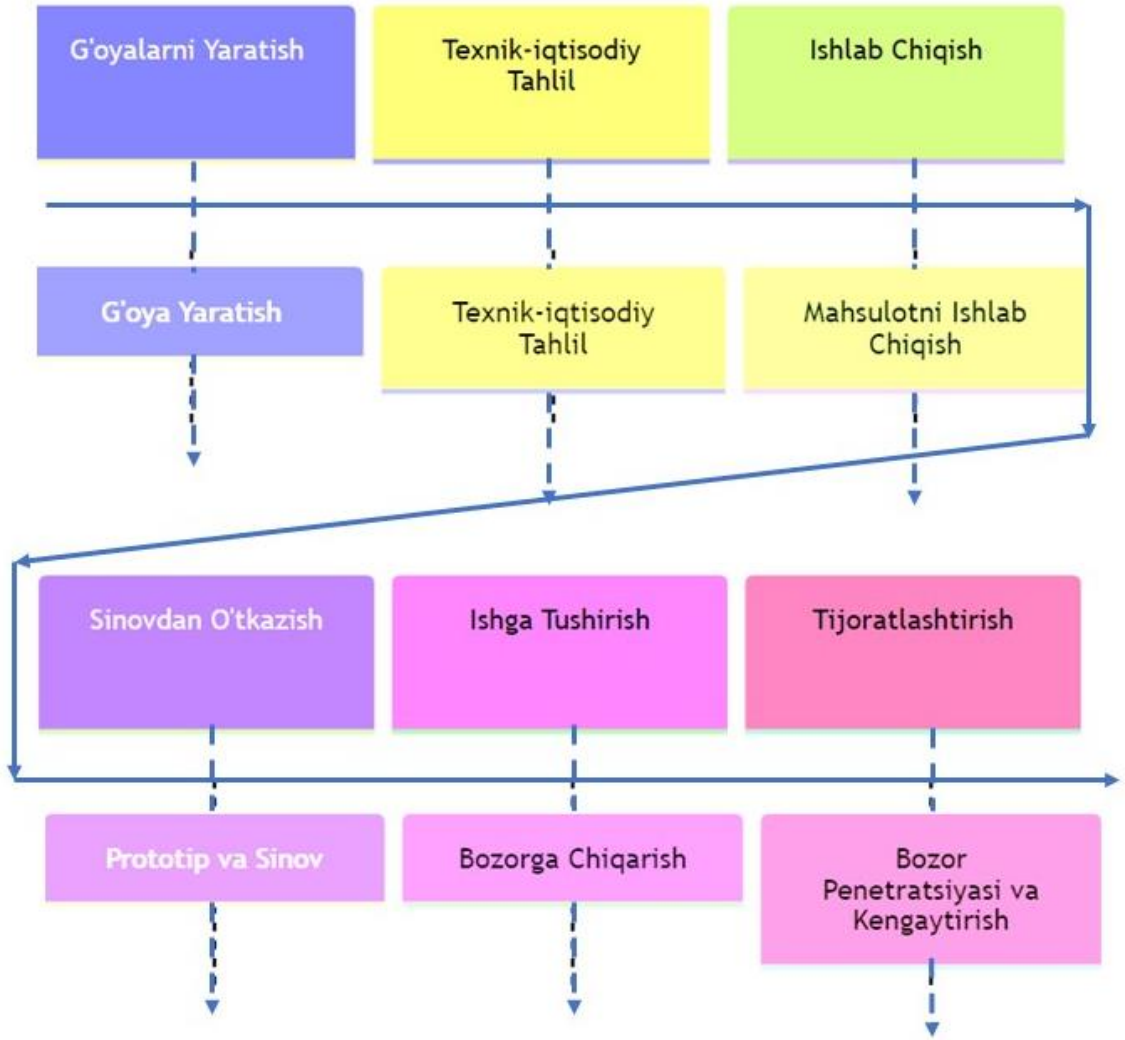
Tahlil va natijalar.

Innovatsiya - bu noaniq va notinch sharoitlarda tashkilotlarning omon qolishi va rivojlanishi uchun vositadir. Innovatsion menejment fani katta ilmiy bazaga ega bo‘lgan tadqiqot, o‘qitish va amaliyotning yaxshi yo‘lga qo‘yilgan sohasiga aylandi. Keng qamrovli tadqiqot sohasi sifatida innovatsiya fani iqtisod, muhandislik va psixologiya kabi bir qator istiqbolli yo‘nalishlardan kelib chiqadi. Innovatsiyalar iqtisodiy va ijtimoiy taraqqiyot uchun hal qiluvchi ahamiyatga ega bo‘lib, u foydali bo‘lishi uchun uni boshqarish kerak.

Innovatsiyalarni boshqarish. Innovatsiyalarni boshqarish - biznesni jahon miqyosida mashur qilish uchun biznesda o‘zgarishlar va yangiliklarni kiritishni va innovatsion strategiyalarning kontseptual tushunchalarini amalda tashkillashdan iborat [11]. Raqamli zamon sharoitlarda korxonalar uchun innovatsiyalarni boshqarishning ahamiyati ortib bormoqda. Bozorda raqobatbardoshlikni saqlab qolish uchun doimiy takomillashtirish, texnik yangiliklarni joriy etish va yangi mahsulotlarni ishlab chiqish zarurdir. Korxonalarda innovatsiyalarni boshqarishning asosiy bosqichlariga tayangan holda kamchiliklar va eng dolzarb muammolarni hal qilish, nafaqat korxonani balki, mamlakatda innovatsiyalarning haqiqiy holatidan yuqoriga olib chiqishga imkon beradi [12]. Innovatsion jarayon bir necha bosqichlarni o‘z ichiga oladi, jumladan, g‘oyalarni yaratish, texnik-iqtisodiy tahlil, ishlab chiqish, sinovdan o‘tkazish, ishga tushirish va tijoratlashtirish. Innovatsiyalarni samarali boshqarish har bir bosqichni chuqur tushunishni va jarayon ishtirokchilarni boshqarish qobiliyatini talab qiladi [13].

1-rasm orqali har bir Innovatsion bosqichni aniq ko‘rish mumkin: g‘oyalarni yaratish, texnik-iqtisodiy tahlil, ishlab chiqish, sinovdan o‘tkazish, ishga tushirish va tijoratlashtirish. Bu bosqichlar innovatsion jarayonning muhim qismlarini ifodalaydi va har biri muvaffaqiyatli innovatsiya uchun zarurdir. Bozorga kirib borish (bozor penetratsiyasi) - bu mahsulot yoki xizmatning umumiy taxminiy bozoriga nisbatan xaridorlar tomonidan qancha miqdorda foydalanilayotganligi o‘lchovidir.

Muvaffaqiyatli innovatsiyalar va barqaror raqobatdosh ustunlikni ta’minlash uchun innovatsiyalar bilan bog‘liq xarajatlar, imtiyozlar va vakolatlarni integral tarzda ko‘rib chiqish va innovatsiya bosqichlari bilan taqqoslash kerak [14]. Innovatsiya dizayni oddiy bo‘lishi va ma’lum bir klinik muammoni hal qilishga qaratilgan bo‘lishi mumkin. Murakkab dizaynlardan yoki bir nechta muammolarni hal qilishga urinishlardan qochish kerak [15]. Innovatsion jarayonning modellari xilma-xildir, lekin ularning barchasi axborot va boshqaruv oqimlarini boshqarish, to‘siqlarni aniqlash, texnologik imkoniyatlar va bozor ehtiyojlari o‘rtasidagi munosabatni hisobga olish muhimligini ta’kidlaydi. Tashkilotlarda innovatsiyalarni boshqarish ko‘pincha innovatsiyalarni boshqarish tizimining asosiy elementlari bo‘lgan individual innovatsion loyihalar orqali amalga oshiriladi.



1-rasm. Innovatsion jarayon bosqichlari

Manba: mualliflar ishlanmasi.

Innovatsiyalarni boshqarishning iqtisodiyotdagi o‘rni Innovatsiyalarni boshqarish iqtisodiyot uchun juda muhim, chunki u korxona o‘sishini rag‘batlantiradi, ish o‘rinlarini yaratadi va raqobatbardoshlikni oshiradi. Bu kompaniyalarga raqobatchilardan ajralib turish va yangi bozorlarni yaratish imkonini beradi, bu esa daromad va foydaning oshishiga olib keladi. Shuningdek, bu ijtimoiy muammolarni hal qilish va hayot sifatini yaxshilashga yordam beradi [16]. Innovatsiyalarni samarali boshqarish va uni amalga oshirish bilan bog‘liq muammolarni bartaraf etish uchun tashkilotlar qabul qilishi mumkin bo‘lgan aniq strategiya va yondashuvlarni belgilab oladi. Tashkilotlarda innovatsiyalarni rag‘batlantirishda yetakchilik rolini va rahbarlar innovatsiyalarni qo‘llab-quvvatlovchi madaniyatni qanday yaratishi mumkinligini o‘rganishi darkor. Innovatsiyalarga asoslangan boshqaruv nazariyalari va amaliyotlarini joriy etishning tashkilotlarning umumiy faoliyati va muvaffaqiyatiga uzoq muddatli ta’sirini o‘rganish uchun tadqiqotga ehtiyoj bor. Kelajakdagi tadqiqotlar, shuningdek, innovatsiyalarni boshqarish samaradorligi va ushbu omillarning qanday ta’sir qilishini chuqurroq tushunish uchun tashkiliy tuzilma, resurslar va imkoniyatlar kabi boshqa tashkiliy omillar o‘rtasidagi munosabatni o‘rganishni talab qiladi [17].

Innovatsiyalarni boshqarish muvaffaqiyatiga ta’sir etuvchi omillarga yetakchilik, madaniyat, resurslar, strategiya va hamkorlik kiradi. Samarali yetakchilik innovatsiyalar uchun strategiyani belgilaydi hamda ijodkorlik va tavakkalchilik madaniyatini rivojlantiradi [18]. Qo‘llab-quvvatlovchi innovatsion madaniyat tajriba, o‘rganish va doimiy takomillashtirishni rag‘batlantiradi [19]. Adekvat resurslar, jumladan, moliyalashtirish, iqtidor va infratuzilma innovatsiyalar muvaffaqiyati uchun zarurdir. Kompaniyaning maqsad va vazifalariga mos keladigan aniq innovatsion strategiya ham juda muhim [20]. Tashqi hamkorlar, mijozlar va manfaatdor tomonlar bilan hamkorlik innovatsion jarayonlarga yangi istiqbollar va tushunchalarni olib kelishi mumkin.

Innovatsiyalarni boshqarishga raqamlashtirishni qo‘llash

Innovatsiyalarni boshqarish va raqamlashtirish bir-biri bilan chambarchas bog‘liq bo‘lib, raqamlashtirish innovatsiyalar va iqtisodiy o‘sish uchun katalizator bo‘lib xizmat qiladi. Biznes jarayonlarini optimallashtirish va aloqa kanallarini yaxshilash uchun raqamli texnologiyalarni joriy qilish orqali tashkilotlar innovatsiyalar uchun yangi imkoniyatlarni ochishlari mumkin [21]. Raqamlashtirish kompaniyalarga operatsiyalarni soddalashtirish, qarorlar qabul qilish uchun ma’lumotlar tahlilidan foydalanish, ijodkorlik va tajriba madaniyatini rivojlantirish imkonini beradi. Bundan tashqari, u rivojlanayotgan mijozlar ehtiyojlari va imtiyozlarini qondirish uchun moslashtirilgan yangi mahsulot va xizmatlarni ishlab chiqishga yordam beradi. Oxir oqibat, raqamli texnologiyalarning integratsiyasi nafaqat samaradorlikni oshiradi, balki bugungi raqamli asrda barqaror iqtisodiy o‘sishni ta’minlovchi doimiy innovatsiyalar yaralishini kuchaytiradi.

Raqamlashtirish raqamli transformatsiyaning quyi jarayoni hisoblanadi va uning texnologik drayveri sifatida ishlaydi [22]. Raqamli transformatsiya biznesning barcha jabhalarida raqamli texnologiyalardan foydalanish uchun kengroq tashkiliy o‘zgarishlarni o‘z ichiga olgan bo‘lsa-da, raqamlashtirish, ayniqsa, mavjud operatsiyalarda raqamli vositalar va jarayonlarni qabul qilishga qaratilgan.

Boshqaruv tuzilmalarining raqamli transformatsiyasi hozirgi davrga moslashish uchun zarur bo‘lib, raqamli boshqaruv va raqamli liderlar kabi tushunchalarni o‘z ichiga oladi [23]. Tashkilotlar raqamli landshaftning murakkabliklarida harakat qilar ekan, boshqaruvning an’naviy yondashuvlari texnologiyaga asoslangan strategiya va metodologiyalarni qamrab olish uchun rivojlanmoqda. Raqamli boshqaruv raqamli vositalar va platformalarni boshqaruv amaliyotiga integratsiyalashni o‘z ichiga oladi, bu ma’lumotlarga asoslangan qarorlar qabul qilish, tezkor loyihalarni boshqarish va virtual hamkorlikni ta’minlaydi. Shu bilan birga, rahbarlarga ushbu transformatsiyani boshqarish, tashkilotlarni raqamli rivojlantirish orqali boshqarish va innovatsiyalarni rivojlantirish uchun ko‘nikma va moslashuvchanlikka ega bo‘lish vazifasi yuklangan. Raqamli boshqaruv tamoyillarini qabul qilish va raqamli yetakchilik qobiliyatini rivojlantirish tashkilotlarning bugungi tez rivojlanayotgan biznes muhitida muvaffaqiyat qozonishi uchun zarurdir.

Sanoat sohasida raqamlashtirish davlat sanoat siyosati, innovatsion boshqaruv bo‘yicha qarorlar qabul qilish, kutilayotgan qisqa va uzoq muddatli natijalar kabi elementlarni o‘z ichiga olgan innovatsion boshqaruv mexanizmini ishlab chiqishni talab qiladi. Masalan, hukumatlar avtomatlashtirish yoki aqlli ishlab chiqarish tizimlariga investitsiyalar uchun grantlar yoki soliq imtiyozlarini berish kabi ishlab chiqarish jarayonlarida raqamli texnologiyalarni joriy etishni rag‘batlantirish siyosatini amalga oshirishi mumkin. Innovatsion menejment bo‘yicha qaror qabul qilish sanoat korxonalarida innovatsiya madaniyatini rivojlantirish uchun texnologiyani qabul

qilish, resurslarni taqsimlash va iste'dodlarni rivojlantirish bo'yicha strategik tanlovlarni o'z ichiga oladi. Kutilayotgan qisqa muddatli natijalarga operatsion samaradorlikni oshirish, ishlab chiqarish xarajatlarini kamaytirish va mahsulot sifatini yaxshilash kiradi, uzoq muddatli natijalar esa raqobatbardoshlikni oshirish, bozorni kengaytirish va barqaror o'sishni o'z ichiga olishi mumkin.

Raqamlashtirish, shuningdek, innovatsiyalarni tashkil etishga ta'sir qiladi, bu hamkorlik tarmoqlari va platformaga asoslangan ekotizimlar kabi innovatsiyalarni boshqarishning yangi shakllariga olib keladi. Masalan, kompaniyalar innovatsion yechimlarni birgalikda yaratish va yangi bozorlarga chiqish uchun tashqi hamkorlar, jumladan, startaplar, tadqiqot institutlari va yetkazib beruvchilar bilan tobora ko'proq hamkorlik qilmoqda. Ushbu hamkorlikdagi tarmoqlar aloqa, bilim almashish va geografiyalar va tashkiliy chegaralar bo'ylab birgalikda rivojlanish sa'y-harakatlarini osonlashtirish uchun raqamli platformalar va vositalardan foydalanadi. Bundan tashqari, ilovalar do'konlari yoki innovatsion bozorlar kabi platformaga asoslangan ekotizimlar firmalarga keng ko'lamli qo'shimcha texnologiyalar va xizmatlardan foydalanish imkonini beradi, tezkor tajriba va innovatsiyalarni keng miqyosda qo'llab-quvvatlaydi, shu bilan birga bozorga chiqish vaqtini va ishlab chiqish xarajatlarini kamaytiradi.

Onlayn elektron ishtirok etish	59	60	70	59	46	46	55

3-rasm. GII bo'yicha O'zbekistondagi Axborot-kommunikatsiya texnologiyalari (AKT) ko'rsatkichlari dinamikasi.

Manba: The Global Innovation Index ma'lumotlari asosida mualliflar ishi.

Tajriba tariqasida foydalanish natijalariga ko'ra, Davlat radiochastotalar komissiyasi tomonidan respublikada WiMAX texnologiyasi bo'yicha keng tarmoqli simsiz foydalanish tarmoqlarini rivojlantirish maqsadida har bir opretorga chastotalar tarmoqli ajratib berilgan edi. Bu katta hududlarni qamrab olish bilan birga simsiz tarmoqlarni yaratish imkonini beradi (50 kilometrgacha). Bunda ma'lumotlarni uzatish tezligi 32 dan 135 Mbit/s gachani tashkil etadi. Shu

bilan birga Wi-Fi texnologiyasi bo‘yicha simsiz foydalanish tarmoqlarini rivojlantirish uchun chastotalar ajratib berilgan. Ular simsiz lokal (ofis ichidagi) tarmoqlarni yaratishga va internet tarmog‘iga ma’lumotlarni uzatish tezligi 54 Mbit/s bo‘lgan yuqori tezlikka ega simsiz ulanishlarni vujudga keltirishga mo‘ljallangan.

Mamlakatlardagi raqobatchilik muhitining kuchayishi munosabati bilan GII bo‘yicha O‘zbekistondagi Axborot-kommunikatsiya texnologiyalari (AKT) ko‘rsatkichlari dinamikasi muttasil o‘sib bormoqda, ularni quyidagi 3-rasm ma’lumotlarida ko‘rish mumkin.

GII bo‘yicha O‘zbekistondagi Axborot-kommunikatsiya texnologiyalari (AKT) ko‘rsatkichlari dinamikasiga e’tibor qaratsak, barcha ko‘rsatkichlar bo‘yicha o‘sish trendini kuzatishimiz mumkin [24]. Bu yerda so‘ngi 10 yilda AKTga kirish indeksi +33 punktga, AKTdan foydalanish indeksi +45 punktga, Hukumatning onlayn xizmati +10 punktga, Onlayn elektron ishtirok etish +4 punktga o‘sgan. GII bo‘yicha reytingda O‘zbekistondagi Axborot-kommunikatsiya texnologiyalari (AKT) 63 o‘rinni, Infratuzilma 73 o‘rinni egallagan.

3-rasm ma’lumotlaridan ko‘rinib turibdiki, Respublikamizda axborot kommunikatsiya texnologiyalari va hukumatning onlayn xizmati tizimini rivojlantirishga berilgan katta e’tibor tufayli soha tez rivojlanmoqda. Ammo AKT ga kirish bo‘yicha GII reytingida 2023 yil holatiga 73 o‘rinni egallagan. Bu esa bozorning ushbu segmentida qo‘shimcha ishlar olib borishligidan dalolat beradi.

GII bo‘yicha O‘zbekistondagi Onlayn ijodkorlik ko‘rsatkichlari dinamikasiga e’tibor qaratsak (4-rasm), ko‘rsatkichlarning nobarqaror rivojlanishdaligini kuzatishimiz mumkin. Bu yerda so‘ngi 4 yilda Onlayn ijodkorlik o‘zgarmagan va GII bo‘yicha reytingda 126 o‘rindan +36 punktga ko‘tarilib 90 o‘rinni egallagan. Uning tashkil etuvchilari Umumiy yuqori darajadagi domenlar -1 punktga salbiy va GII-2020 bo‘yicha reytingda 131 o‘rindan 132 o‘ringa tushgan. Mamlakat kodining yuqori darajadagi domenlari esa GII bo‘yicha reytingda 85 o‘rindan 78 oringa ko‘tarilgan. Mobil ilovalarni yaratish GII-2020 bo‘yicha reytingda 98 o‘rindan 79 o‘ringa ko‘tarilgan. GitHub commit bo‘yicha ma’lumotlar 2021-23 yilda taqdim etilib mos ravishda 116 va 94 o‘rinni egallagan.

	2013	2014	2015	2020	2021	2022	2023
Onlayn ijodkorlik	127	118	126	126	122	109	90
Umumiy yuqori darajadagi domenlar	131	138	141	131	131	132	132
Mamlakat kodi	105	107	105	85	82	79	78
Mobil ilovalar yaratish				98	99	107	79

4-rasm. GII bo‘yicha O‘zbekistondagi Onlayn ijodkorlik ko‘rsatkichlari reytingi dinamikasi.

Xulosa.

Xulosa qilib aytganda, raqamlashtirish, shuningdek, innovatsiyalarni tashkil etishga ta'sir qiladi, bu hamkorlik tarmoqlari va platformaga asoslangan ekotizimlar kabi innovatsiyalarni boshqarishning yangi shakllariga olib keladi. Bu hamkorlik tarmoqlari, qo'shimcha texnologiyalar va xizmatlardan foydalanishga imkoniyat beradi va tezkor tajriba va innovatsiyalarni keng miqyosda qo'llab-quvvatlaydi, shu bilan birga bozorga chiqish vaqtini va ishlab chiqish xarajatlarini kamaytiradi. Ushbu ommaviy platformalar va vositalar, bizneslarga yangi turli innovatsion yechimlarni kashf etish va ularga kirish imkoniyatini beradi, shunday qilib, innovatsiyalar va raqamli rivojlanishni osonlashtiradi. Masalan, yuqoridagi ommaviy platformalar orqali, bir kompaniya dunyodagi boshqa kompaniyalar bilan hamkorlik qilish va ularning innovatsion yechimlari va texnologiyalari bilan tanishish imkoniyatiga ega bo'ladi. Raqamlashtirish, shu jumladan, Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform kabi katta tizimlar, birgalikda innovatsion loyihalarni yaratish uchun zamonaviy usullar va vositalar taqdim etadi. Bundan tashqari, bir necha sohalardagi boshqa innovatsiyalarni amalga oshirish uchun hamkorlik yaratishda samaradorlikni oshirishga yordam beradi, shu bilan innovatsion loyihalar, tadqiqotlar va yangi mahsulotlar yaratish jarayonini tezlashtiradi. Hamkorlik platformalarida ko'plab kompaniyalar, tadqiqotchilar, va startaplarning birgalikda ishlab chiqilgan innovatsiyalari va yechimlari tizimlarining integratsiyasini o'rganib chiqish va bu yechimlardan samarali foydalanish imkonini yaratishadi. Bular innovatsion mahsulotlar va xizmatlarning turli sohalarini qo'llab-quvvatlash uchun muhimoq yechimlarni yaratishda yordam beradi.

GREEN ECONOMY IN UZBEKISTAN: PROSPECTS AND CHALLENGES

Kulimin Daniil
A second-year student at the University of Bangor(MDIST),
at faculty BSc (Hons) in Computer Information Systems for Business
https://doi.org/10.5281/zenodo.14842756

Abstract. *The transition to a green economy is a pivotal element of Uzbekistan's sustainable development strategy, driven by the need to address environmental challenges, reduce greenhouse gas emissions, and promote economic diversification. This paper examines the prospects and challenges of Uzbekistan's green economy initiatives, focusing on government policies, renewable energy investments, and socio-economic implications. Key government strategies, such as the Green Economy Strategy (2019-2030), aim to foster sustainable practices in energy, agriculture, and industry. While the transition offers significant opportunities for job creation, economic resilience, and social equity, it also faces challenges such as infrastructure limitations, investment gaps, and regulatory barriers. This article concludes that Uzbekistan's success in achieving a green economy will depend on its ability to attract international funding, modernize infrastructure, and implement effective regulatory frameworks. By addressing these challenges and leveraging its renewable energy potential, Uzbekistan can establish itself as a regional leader in sustainable development.*

Keywords: *Green economy, Uzbekistan, sustainable development, renewable energy, environmental policy, economic diversification*

Introduction

The concept of a green economy refers to an economic system that aims to reduce environmental risks and ecological scarcities, while promoting sustainable development without degrading the environment. The transition to a green economy is increasingly recognized as a necessity, especially in the context of global climate change, environmental degradation, and the depletion of natural resources. For countries like Uzbekistan, which has a history of reliance on resource-intensive sectors such as agriculture and fossil fuels, the shift towards a green economy presents both critical opportunities and formidable challenges.

Uzbekistan is strategically located in Central Asia, rich in natural resources and diverse ecosystems, yet it also faces significant environmental challenges including water scarcity, air and soil pollution, and climate change effects. The country is predominantly reliant on agriculture, and its economic structure must evolve to embrace sustainability. This article explores the prospects and challenges of adopting a green economy in Uzbekistan, assessing the current initiatives and future pathways toward achieving environmental stability and economic resilience.

Methods

This study employs a qualitative research approach, utilizing a comprehensive literature review of existing policies and frameworks related to the green economy in Uzbekistan. Data has been collected from government reports, international organizations, and scholarly articles to evaluate the current state of environmental practices, economic dependencies, and potential areas for green investment.

The framework for analysis includes environmental sustainability metrics, economic viability assessments, and social impact evaluations, allowing for a multi-faceted understanding of Uzbekistan's path towards a green economy. Case studies of successful green initiatives in the region and comparisons with other countries that have made strides in sustainability provide valuable insights into applicable strategies.

Results

Environmental Context

Uzbekistan's landscape is marked by significant environmental issues. According to the World Bank, over 70% of the country's water resources are used for agriculture, primarily cotton production. This practice has led to severe water depletion and contamination of water sources. Additionally, reports indicate that the country faces challenges such as land degradation and air pollution, particularly in urban centers.

Recent Presidential Decisions and New Resolutions in 2024 for Green Initiatives in Uzbekistan:

- Focus on Renewable Energy Expansion:
  - Presidential Decree on "Accelerating the Development of Renewable Energy Sources": This decree outlines ambitious targets for increasing the share of renewable energy in the country's energy mix, including specific goals for solar, wind, and hydropower.
  - Incentives for Private Investment: New policies aim to attract private investment in renewable energy projects through tax breaks, simplified licensing procedures, and guaranteed feed-in tariffs for renewable energy producers.
- Strengthening Environmental Protection:
  - Resolution on "Improving Environmental Monitoring and Control": This resolution establishes stricter environmental regulations, strengthens enforcement mechanisms, and increases penalties for environmental violations.
  - Focus on Air and Water Quality: New initiatives aim to improve air quality in urban areas by promoting electric vehicles, upgrading industrial emissions standards, and expanding green spaces. Efforts to conserve water resources and improve water quality are also being prioritized.
- Promoting Sustainable Agriculture:
  - Subsidies for Sustainable Farming Practices: New government programs provide subsidies to farmers who adopt sustainable agricultural practices, such as water-efficient irrigation, organic farming, and reduced pesticide use.
  - Promoting Agroforestry: Initiatives are underway to promote agroforestry practices, which integrate trees and shrubs into agricultural landscapes to enhance soil health, improve water retention, and increase biodiversity.
- Addressing Climate Change:
  - National Climate Change Adaptation Strategy: The government is developing a comprehensive national strategy to adapt to the impacts of climate change, including measures to reduce vulnerability to droughts, floods, and other climate-related disasters.
  - International Cooperation: Uzbekistan is actively participating in international efforts to combat climate change, including collaborating with international organizations and other countries on climate mitigation and adaptation projects.

Key Environmental Indicators in Uzbekistan (2024)

Table 1

Indicator	Value	Source
Total carbon emissions	55.8 million tons	State Committee of the Republic of Uzbekistan on Ecology and Environmental Protection
Water withdrawal (agriculture)	68% of total resources	World Bank data on water resources in Uzbekistan
Deforestation rate	0.9% annually	Forestry Agency of the Republic of Uzbekistan
Air pollution (PM10)	75 µg/m³	Uzbekistan Ministry of Health, Air Quality Monitoring Department

Green Initiatives in Uzbekistan (2024)

Table 2

Initiative	Description	Expected Outcomes	Source
Uzbekistan Renewable Energy Development Project	Investment in solar and wind energy sectors, including large-scale solar plants and wind farms.	Increased energy output from renewables; reduced reliance on fossil fuels; creation of green jobs.	Ministry of Energy of Uzbekistan, Asian Development Bank
National Program for Waste Management	Policies for recycling, waste reduction, and improved waste collection and disposal systems.	Improved waste management practices; reduced pollution; potential for resource recovery and recycling industries.	State Committee of the Republic of Uzbekistan on Ecology and Environmental Protection
Sustainable Agricultural Practices	Promotion of water-efficient irrigation, reduced pesticide use, and climate-resilient crops.	Reduced water uses and improved soil health; increased agricultural productivity; enhanced biodiversity.	Ministry of Agriculture of Uzbekistan

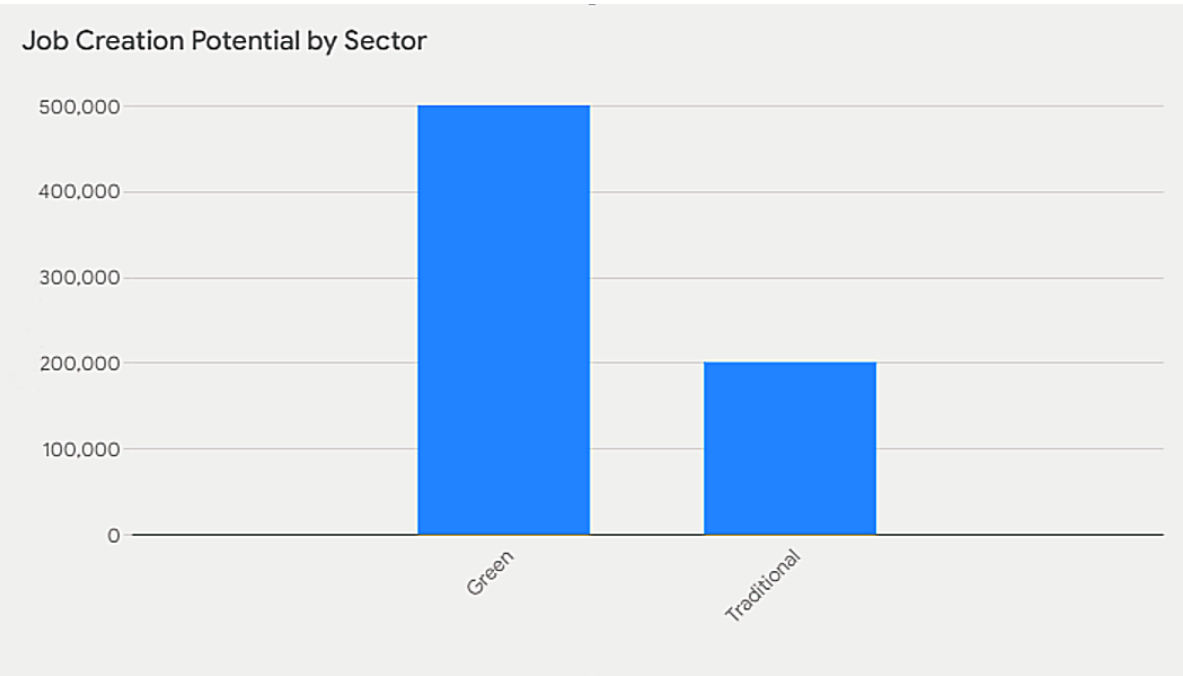
Graph 1: Projected Job Creation Potential in Uzbekistan (2024-2030)

Sources for Graph 1:

- United Nations Development Programmed (UNDP)
- International Labor Organization (ILO)
- Ministry of Economic Development and Poverty Reduction of Uzbekistan

Notes:

- The data in Table 1 has been updated for the year 2024 based on the latest available information from the respective sources.
- Table 2 includes additional details on the initiatives and their expected outcomes.
- Graph 1 is a visual representation of the projected job creation potential in green sectors compared to traditional sectors. The actual graph would need to be created using data from the cited sources.



Such a transition is particularly significant for a country where unemployment remains a challenge, especially among youth. The economic growth projected from a shift to green initiatives can contribute to poverty alleviation and enhanced livelihoods.

Discussion

Challenges Faced

Despite the promising prospects of a green economy in Uzbekistan, several challenges hinder the transition:

1. Dependency on Fossil Fuels: The Uzbek economy still heavily relies on natural gas exports. This reliance creates a conflict between economic growth and environmental sustainability. Transitioning to a green economy will require significant investments and a shift in policy focus.
2. Policy and Governance Issues: There are gaps in policy frameworks and regulatory mechanisms necessary to support green initiatives. Effective governance is essential to ensure accountability and the successful implementation of policies aimed at sustainability.
3. Social Awareness and Acceptance: Public awareness concerning environmental issues and the benefits of a green economy is relatively low. Raising awareness and educating communities on the importance of sustainability are critical steps in facilitating this transition.
4. Financial Constraints: Funding is a major barrier to adopting new technologies and practices needed for a green economy. International investment, along with domestic financial mechanisms, are necessary to create a conducive environment for green development.

Future Prospects

The future of Uzbekistan's green economy is contingent upon addressing these challenges effectively. Opportunities for growth exist in various sectors:

1. Renewable Energy: Expanding the use of solar and wind energy can not only meet domestic energy needs but can also position Uzbekistan as a regional leader in renewable energy production.
2. Sustainable Agriculture: Transitioning to sustainable agricultural practices can help conserve water and enhance soil health. Agra-ecological methods can reduce reliance on chemical fertilizers and pesticides, promoting healthier ecosystems.
3. Eco-Tourism: With its rich cultural heritage and natural landscapes, Uzbekistan has the potential to develop its eco-tourism sector, which can contribute to both economic growth and environmental conservation.
4. International Cooperation: Partnering with international organizations for funding and knowledge exchange can bolster local efforts and introduce innovative technologies that support sustainable development.

Conclusion

Transitioning to a green economy offers Uzbekistan a pathway to enhance its economic resilience while addressing pressing environmental challenges. The country's rich natural resources provide a unique opportunity for developing sustainable practices that benefit both the environment and the economy. However, the success of this transition will depend on effective policymaking, public awareness, and financial investments.

By overcoming existing challenges, Uzbekistan can leverage its potential for significant economic and environmental improvements, setting an example for other nations in the region. A commitment to a green economy is not just an environmental imperative but a necessary step toward ensuring the well-being of future generations in Uzbekistan.

ENHANCING CREDIT RISK MANAGEMENT IN LENDING INSTITUTIONS OF UZBEKISTAN

Isakov Olmas Kuchkarovich
Lecturer at Westminster International University in Tashkent
https://doi.org/10.5281/zenodo.14842635

Abstract. *This study explores the current practices and challenges in managing credit risk within Uzbekistan's lending sector, with a focus on commercial banks. By analyzing regulatory frameworks, macroeconomic factors, and institutional practices, the research identifies key inefficiencies and proposes innovative strategies tailored to Uzbekistan's financial environment. Recommendations include leveraging advanced analytics, improving risk assessment methodologies, and fostering regulatory reforms to align with international best practices. The findings aim to contribute to more resilient lending systems and sustainable economic growth in Uzbekistan.*

Introduction

The lending institutions can operate successfully and improve their performances by mitigating these risks through pragmatic decision making. One of such risks which play important role on the company's performance is credit risk. The concept of credit risk refers to the potential loss that a bank or any lending party may incur due to the failure of a borrower to repay a loan or meet its financial obligations. Avery et al. (1996) has explained that when a borrower is unable to pay his debt partially or fully on the prescribed time period, it is referred to as credit risk.

Two of the main lending institutions that provide loans to borrowers are commercial banks and microfinance institutions (MFIs). While the origin of commercial banks date to 15th century[10], a modern form of microfinancing has roots to early 1970s when the Grameen Bank of Bangladesh was founded by Mohammad Yunus[11]. There are several differences between commercial banks and MFIs. The key ones are listed below:

- Microfinance institutions primarily serve low-income individuals, small businesses, and entrepreneurs who lack access to traditional banking services. On the other hand, commercial banks cater to a broader range of customers, including individuals, small and medium enterprises, and large corporations.
- Microfinance loans are generally smaller in size, often ranging from a few hundred thousand to a few million uzbek soums. According to the Presidential Decree of the Republic of Uzbekistan, PQ-364, dated November 10th, 2023, the maximum amount of microloan was set at 100 mln uzbek soums. Commercial bank loans can vary significantly in size, from small personal loans to large corporate financing.
- The collateral requirements are more flexible for MFIs compared to commercial banks. They can rely more on group guarantees or alternative forms of security rather than traditional assets like real estate.

Literature review

[10] https://www.cobaltrecruitment.co.uk/blog/2019/01/the-five-oldest-banks-in-the-world?source=google.com
[11] https://microfinanceinfo.com/history-of-microfinance/

Credit risk is an important concern for credit institutions because it can have a significant impact on their financial performance. Since they are in the business of lending money, credit risk is an inherent part of their operations. The commercial banks and other credit institutions' pursuit to increase profitability comes at the cost of higher credit risk. It is impossible for credit institutions to completely abolish the credit risk because this can be only achieved if the institution stops giving out loans.

But we all know that the main source of credit institutions come from interest margin between deposit rate and loan rate. Therefore, it is essential for credit institutions to manage credit risk effectively to ensure their long-term sustainability and maximize their wealth. When dealing with credit risk, it is important to have a better understanding of non-performing loans (NPL). NPL generally refer to loans which do not generate income for a relatively long period of time, that is, the principal and/or interest on these loans has been left unpaid for at least 90 days (Laryea et. al, 2016).

After analyzing the previous literature, I concluded that impact of NPL on the profitability of banks is negative. Quite a few authors such as Kingu, Macha and Gwahula (2018), Anastasiou, Louri and Tsionas (2016), Akter and Roy (2017), and Petkovski, Kjosevski and Jovanovski (2018) have studied the impact of non-performing loans on the profitability of commercial banks. All these studies have found significant negative relationship between nonperforming loans and profitability indicators within various selected countries or regions.

Data and Methodology

After the bank failures in the US and Germany in 1974, the financial regulators of the G10 countries set up a committee to improve the quality of banking supervision at international level. Basel I, also known as the Basel Capital Accord, was formed in 1988. It provided a framework for managing credit risk through the risk-weighting of different assets. According to Basel I, assets were classified into five categories based on risk weights: 0%, 10%, 20%, 50% and 100%. The assets are classified into those different categories based on the nature of the debtor, as shown in Table 1.

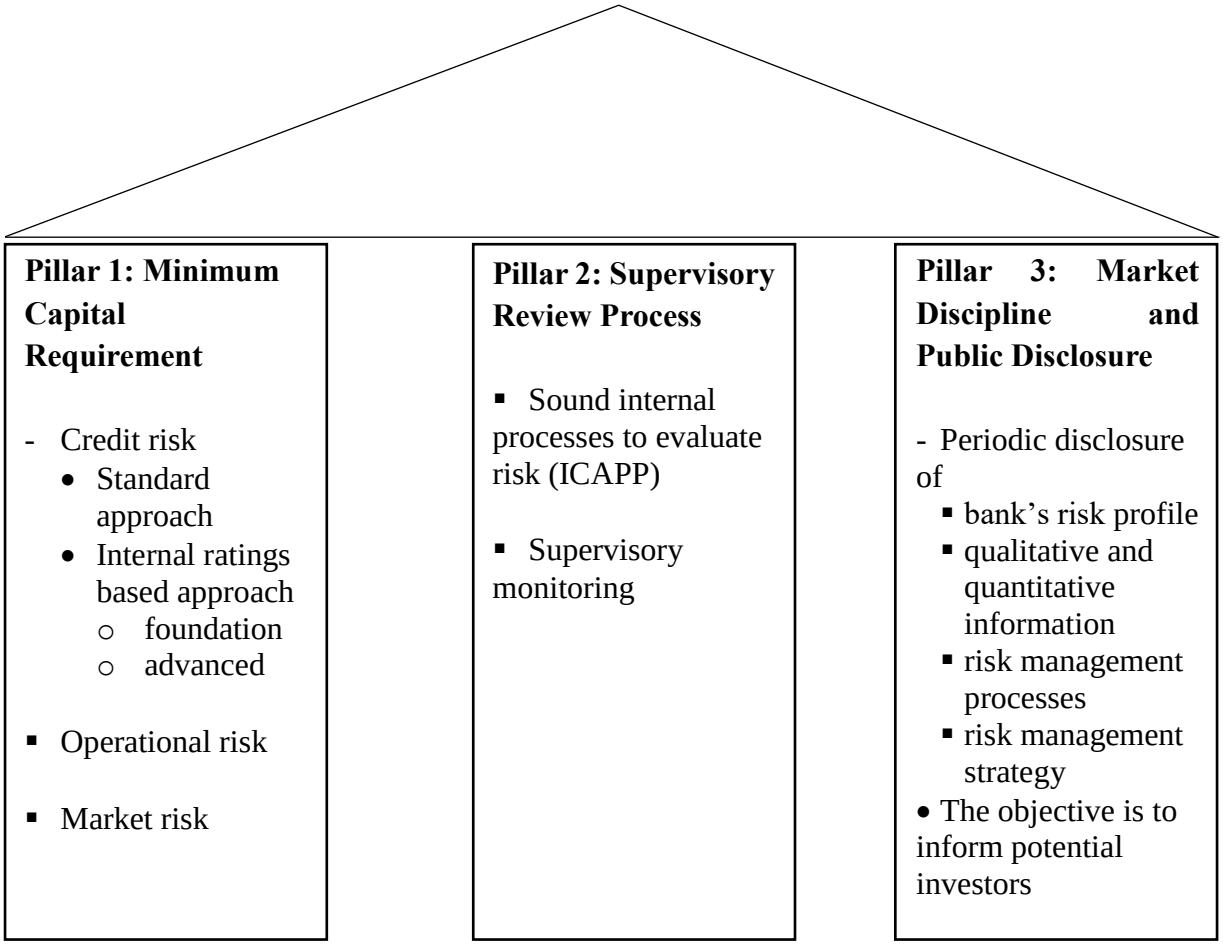
Basel II, an extension of Basel I, was introduced in 2004. Basel II included new regulatory additions and was centered around improving three key issues – minimum capital requirements, supervisory mechanisms and transparency, and market discipline. Basel II created a more comprehensive risk management framework (See Picture 1). It did so by creating standardized measures for credit, operational, and market risk. It was mandatory for banks to use these measures to determine their minimum capital requirements.

The Global Financial Crisis of 2008 exposed the weaknesses of the international financial system and led to the creation of Basel III. The Basel III regulations were created in November 2010 after the financial crisis; however, they are yet to be implemented. Their implementation's constantly been delayed in recent years and is expected to occur in January 2025. Basel III identified the key reasons that caused the financial crisis.

They include poor corporate governance and liquidity management, over-levered capital structures due to lack of regulatory restrictions, and misaligned incentives in Basel I and II. Basel III strengthened the minimum capital requirements outlined in Basel I and II (See Table 2). In addition, it introduced various capital, leverage, and liquidity ratio requirements.

Table 1. Classification of assets into different categories[12].

0% Risk Category	10% Risk Category	20% Risk Category	50% Risk Category	100% Risk Category
Cash, government debt, Central Bank debt, and debt of governmental departments or organizations	Central Bank debt of countries with high inflation in the recent past	Development bank debts, OECD bank debt, non-OECD bank debt under one year of maturity, and non-OECD public sector debt	Residential mortgages	Private sector debt, non-OECD bank debt with maturity over a year, real estate, plant and equipment, and capital instruments issued at other banks.



Picture 1. The Pillars of BASEL II.

[12] Refer to Corporate Finance Institute:

https://corporatefinanceinstitute.com/resources/risk-management/basel-i/

The desirability of the Basel III regulations and the effect of its new capital requirements on the profitability of commercial banks have been highly debated. Some literature argues that there are significant macroeconomic benefits from raising bank equity: higher capital requirements lower leverage and the risk of bank bankruptcies (Admati et al., 2010). On the other hand, there are some studies (BIS, 2010, Angelini et al., 2011), which argue that there could be significant costs of implementing a regime with higher capital requirements: higher capital requirements will increase banks the cost of equity financing relative to debt financing. The latter will induce banks to raise the cost of lending which will have negative effects on economic growth.

	Basel II	Basel III
1. Minimum Capital Requirements		
Common Tier 1 capital ratio (common equity = shareholders' equity + retained earnings)	2%* RWA	4.5%* RWA
Tier 1 capital ratio	4%* RWA	6%* RWA
Tier 2 capital ratio	4%* RWA	2%* RWA
Capital conservation buffer (common equity)	-	2.5%* RWA
Countercyclical buffer	-	0%-2.5%* RWA
2. Leverage Ratio		
Non-risk based leverage ratio	-	> 3%
3. Liquidity Requirements		
Liquidity Coverage Ratio		>100%

Table 2. Comparison of Basel II and Basel III requirements[13].

Conclusion

The main summary of this research is as follows:

- Effective credit risk management is essential in lending institutions' long-term stability and growth in the current economic climate. The global financial crisis of 2007-09 has underscored the significance of strong credit risk management for financial institutions, revealing the negative consequences of inadequate risk management practices.

- When assessing the credit risk, the financial professionals need to consider both judgmental and statistical approach. While the judgmental approach is based on the merit and experience of credit analysts, the statistical approach focuses on estimating the credit risk using various statistical and machine learning methods.

[13] *Note:* RWA = risk-weighted assets.

- The credit risk managers conduct fundamental analysis to assess the creditworthiness of the borrower by calculating various financial ratios and monitor the credit rating published by the major credit rating agencies.

- Basel III is an internationally set of measures developed by the Basel Committee on Banking Supervision in response to the financial crisis of 2007-09. Following these measures improves the banks' ability to handle financial stress during economic downturns or unforeseen circumstances. There is much work to in banking and non-banking system of Uzbekistan to gradually adopt the latest standards of Basel III.

DRIVING SUSTAINABLE DEVELOPMENT THROUGH MODERN MANAGEMENT: ENHANCING ORGANIZATIONAL PERFORMANCE AND IMPACT IN UZBEKISTAN

Gabriel Ayodeji Ogunmola
Doctoral researcher, Andijan Machine-Building Institute, Bobur Shox Ave 56, 170119, Andijan, Andijan region

https://doi.org/10.5281/zenodo.14842835

Abstract. *This study applies modern management theories to Uzbekistan's sustainable growth, focusing on sustainable business models, agile governance, and sustainable software engineering. It shows how these ideas promote economic growth, environmental preservation, and social equality in Uzbekistan's unique socio-economic and environmental milieu. Modern management practises positively correlate with sustainable development indices, demonstrating their major impact on economic advancement, environmental sustainability, and social equity, according to quantitative study. Uzbekistan's sustainability agenda may benefit from global sustainable development models like the Triple Bottom Line (TBL) and Sustainable Development Goals (SDGs), which the paper evaluates. Limited access to technology, legal restrictions, and the requirement for sustainability practice capacity building hinder the full potential of modern management theories. Comparative analysis with similar transitioning economies can reveal Uzbekistan's management practices' sustainability effectiveness and identify context-specific measures to improve sustainability. The report finishes with focused recommendations for governments, corporate leaders, and stakeholders to solve difficulties and use current management theories for sustainable growth. This study adds to sustainable development by showing how modern management ideas can be adapted to transitioning economies like Uzbekistan. It lays the groundwork for future study to improve and apply these theories to global sustainable development.*

Keywords: *Modern Management Theories, Sustainable Development, Uzbekistan, Sustainable Business Models, Agile Governance, Triple Bottom Line (TBL), Sustainable Development Goals (SDGs).*

1.0. Introduction

Modern management theory plays a pivotal role in driving sustainable development, integrating innovative strategies and approaches to address the challenges of economic growth, environmental preservation, and social equity. As we consider the way forward for Uzbekistan, the adoption and adaptation of modern management theories such as sustainable business models, agile governance, and sustainable software engineering offer pathways to achieving sustainable development goals.

Sustainable business models are essential for aligning organizational objectives with sustainability principles, ensuring that businesses contribute positively to economic, environmental, and social goals. [1] provide a comprehensive overview of sustainable business models across various industries, highlighting the increasing popularity and success rate of these models facilitated by advanced technologies. This insight is particularly relevant for Uzbekistan as it seeks to diversify its economy and promote sustainable industries. Agile governance, as

described by [2], emphasizes the importance of agility and responsiveness at the organizational and business levels. This theory advocates for a flexible and customizable IT environment and effective, responsive governance to enhance competitiveness and sustainability. For Uzbekistan, adopting agile governance principles can improve the efficiency and effectiveness of public and private sector organizations, making them more adaptable to the dynamic global environment and better positioned to pursue sustainable development objectives.

Sustainable software engineering, which addresses the environmental impact of digital technologies, is another crucial aspect of modern management theory relevant to sustainable development. By focusing on practices that minimize the environmental footprint of software development, Uzbekistan can leverage its growing IT sector as a force for sustainability, contributing to economic development without compromising environmental integrity. Furthermore, the concept of agile governance is instrumental in enhancing organizational performance and business competitiveness, providing a framework for analyzing and implementing practices that lead to better outcomes. As Uzbekistan continues to develop its governance structures and business practices, incorporating agility and responsiveness can significantly contribute to sustainable growth. The integration of modern management theories into Uzbekistan's development strategy offers a robust framework for achieving sustainability. By focusing on sustainable business models, agile governance, and sustainable software engineering, Uzbekistan can navigate the complexities of sustainable development, balancing economic growth with environmental stewardship and social equity. These approaches not only address the immediate challenges but also lay the groundwork for long-term prosperity and well-being.

Uzbekistan is confronted with distinct growth obstacles, such as social inequality, environmental degradation, and economic diversification. The necessity of sustainable management techniques to guarantee food security, preserve water, and safeguard biodiversity is highlighted by the nation's reliance on agriculture and natural resources. Innovative methods for waste management, energy consumption, and urban planning are required as a result of the rapid industrialization and urbanization that is posing both opportunities and difficulties for sustainable development [3] Considering these obstacles, it is impossible to overestimate the contribution of contemporary management theories to Uzbekistan's sustainable development. It is possible to accelerate the shift to a more sustainable economy by incorporating these theories into national policy and corporate practices. Sustainable business models, for instance, can direct companies toward environmentally and socially responsible behaviors, while agile governance frameworks can improve the government's capacity to respond to environmental emergencies. A multi-stakeholder strategy that makes use of the insights from contemporary management theories is the way forward for Uzbekistan. Fostering collaborations amongst the public and commercial sectors, international organizations, and civil society is part of this [4]. Giving present and future leaders the information and abilities they need to successfully carry out sustainable development projects will also require education and capacity building. A comprehensive strategy for tackling the nation's particular problems is provided by the incorporation of contemporary management theories into Uzbekistan's sustainable development plan. Through putting social justice, economic expansion, and environmental sustainability first, Uzbekistan may start along the path to sustainable development that benefits all facets of the population [5].

1.1. Research Problem and Question

The study focuses on how modern management ideas might be applied and adapted to improve sustainable development in Uzbekistan. This challenge is complex and involves balancing economic competitiveness, environmental stewardship, and social well-being within a nation with distinct cultural, economic, and environmental characteristics. This exploration aims to determine *how modern management theories can be successfully adjusted and implemented in Uzbekistan to encourage sustainable development that balances economic growth with environmental preservation and social equality*. [6] emphasize the need of sustainable business models in modern management theory for accomplishing economic, environmental, and social goals simultaneously. However, they also emphasize the differences in the effectiveness and acceptance of these models in various situations, indicating a lack of knowledge on how to customize these models to specific local circumstances like those in Uzbekistan [7]. [8] proposes the idea of agile governance, highlighting the significance of adaptability, quick response, and including stakeholders in governance procedures to get sustainable development results. Research indicates that flexibility in governance and management practices is essential for applying international theories to specific local situations, aligning with the obstacles encountered by Uzbekistan in utilizing contemporary management theories for long-term growth [9].

The study by [9] highlights the importance of integrating technical sustainability factors into contemporary management practices within sustainable software engineering. The principles discussed are mostly related to the software industry but can also provide valuable perspectives on implementing sustainability in management practices, especially within Uzbekistan's evolving digital economy [10]. The study problem and question are based on the idea that although modern management theories provide a strong foundation for promoting sustainable development, their implementation is not universally applicable. The research highlights a significant deficiency in how these ideas are adapted to specific contexts, particularly in regions with unique socio-economic and environmental obstacles such as Uzbekistan. This study aims to connect modern management theories with the Uzbek context by investigating ways to customize and use them in line with sustainable development principles. The paper examines the challenges of implementing global management strategies at a local level in Uzbekistan, taking into account the country's cultural heritage, transition economy, and the importance of sustainable environmental management. The main goal is to clarify methods that stimulate economic growth while also preserving natural resources and enhancing social well-being. This will contribute to the global conversation on sustainable development by focusing on localized management techniques.

1.2. Research Objectives

The study aims to investigate how modern theories of management propel sustainable development in Uzbekistan. The research objectives are structured to methodically tackle the potential and shortcomings in this area. These goals have been thoughtfully constructed to expand on prior research, assess the situation, and offer workable solutions that may be included into Uzbekistan's development strategy. (1) Examine and summarize the body of research on modern management theories and how they support sustainable development. (2) Examine Uzbekistan's Present Situation with Regard to Sustainable Development and Determine Possible Domains in Which Contemporary Management Theories Could Be Used. (3) Provide a conceptual framework for how uzbekistan's sustainable development strategies could include contemporary management theories. By achieving these goals, the study hopes to provide a thorough analysis and tactical framework that will help Uzbekistan make the most of contemporary management theories for

sustainable growth. This entails not just modifying international best practices but also creatively applying these theories to Uzbekistan's particular economic, environmental, and social requirements.

1.3. Significance of the Study

Contemporary management concepts such as the Triple Bottom Line [11] and Agile Governance [4] emphasize sustainability, flexibility, and stakeholder engagement. Nevertheless, the implementation of these theories in Uzbekistan's sustainable development has not been thoroughly examined. Uzbekistan faces issues in social fairness, environmental sustainability, and economic diversification according to the World Bank's report in 2020 [3]. This study investigates how current management philosophy supports sustainable development and offers a plan for social unity, environmental preservation, and economic well-being. This study enhances worldwide knowledge on sustainable development by examining how Uzbekistan applies modern management theories. It demonstrates how developing countries can utilize management innovation to accomplish the Sustainable Development Goals [8]. This study is expected to impact Uzbekistan's governance structures and business models by integrating sustainability concepts, hence impacting organizational behaviors and policymaking. This could enhance the effectiveness of Uzbekistan's sustainable development initiatives and bring them in alignment with global benchmarks. The paper emphasizes that stakeholder participation is crucial for sustainable development. Advancing modern management concepts encourages a multi-stakeholder strategy for sustainable development in Uzbekistan through collaboration among government, businesses, civil society, and international organizations. This research contributes to the advancement of academic sustainable development and management. This resource is useful for scholars, professionals, and students who are studying sustainable development and management theory in Uzbekistan and similar transitioning economies.

2.0. Literature Review

Management theories have evolved in response to changing societal needs, technological innovations, and an expanding understanding of human psychology in work settings. This evolution has transitioned from an early focus on operational efficiency and structured management to embracing concepts of human relations, flexibility, and systemic analysis.

2.1. Historical Context of Management Theories and Their Evolution

The study of management theories provides a fascinating lens through which to view the evolution of organizational practices and thought leadership within the realm of business. This literature review delves into the historical context and evolution of management theories, tracing the trajectory from early classical approaches to the nuanced, contemporary theories that prioritize sustainability, ethics, and globalization. It leverages a range of seminal works and contemporary analyses to construct a comprehensive overview of management theory's evolution as shown in table 1. The genesis of formal management theories can be traced back to the industrial revolution, a period marked by rapid industrialization and technological advancements that necessitated new methods of organizational management [12]. Frederick W. Taylor, often heralded as the father of scientific management, championed the importance of task specialization and efficiency through his time-motion studies, laying the groundwork for what would become the classical management theory [8; 12]. Taylor's work, emphasizing efficiency and productivity, introduced a systematic approach to management that significantly influenced subsequent theories. Concurrently, [12] and [13] introduced administrative and bureaucratic theories, respectively. Fayol articulated the

principles of management, advocating for planning, organizing, leading, and controlling as the core functions of management [13]. Weber, on the other hand, focused on the establishment of a structured hierarchy and formal rules within organizations, promoting the concept of bureaucratic management as a means of achieving efficiency and effectiveness [14].

Table 1: Evolution of Management Theories: Key Contributors, Concepts, and Significance

Management Theory	Key Contributors	Key Concepts
Scientific Management	[11; 12; 13]	Task specialization, efficiency, productivity
Administrative Theory	[12]	Planning, organizing, leading, controlling
Bureaucratic Theory	[15; 16]	Structured hierarchy, formal rules
Human Relations	[4; 5; 6; 9]	Social relations, employee satisfaction
Systems Theory	[15]	Organizations as open systems, interdependence
Contingency Approach	[16; 17]	No one best way to manage, contingency factors
Total Quality Management	[14; 15]	Continuous improvement, customer satisfaction
Cross-Cultural Management	[15; 16]	Impact of cultural differences on management
Sustainability & CSR	[12; 13]	Triple Bottom Line, ethical and sustainable practices
Digital Transformation	[15; 16]	Embrace of technology, global connectivity

**Complied by author*

The early 20th century witnessed a paradigm shift with the advent of the human relations movement, largely propelled by Elton Mayo‘s Hawthorne studies, which underscored the significance of social relations and employee satisfaction in productivity [13]. These findings challenged the mechanistic views of classical theories, suggesting that understanding human behavior and fostering a positive work environment are critical for organizational success [14]. Building on the foundations laid by the human relations movement, the mid-20th century introduced systems theory and the contingency approach, further complicating the landscape of management thought. Ludwig von Bertalanffy's systems theory presented organizations as open systems, emphasizing the importance of environmental interactions and the interdependence of organizational components [16]. The contingency theory, advocated by [17], posited that there is no one best way to manage an organization; rather, effective management depends on fitting the organization's design and management style to the specific circumstances it faces. In the latter part of the 20th century and into the 21st century, the focus of management theory expanded to include quality management, cross-cultural management, and the integration of sustainability and corporate social responsibility (CSR) into core organizational practices. Total Quality Management (TQM), as proposed by [18] emphasized continuous improvement and customer satisfaction, while [17] work on cross-cultural management highlighted the impact of cultural

differences on management practices. The discussion on sustainability and CSR, notably advanced by [17] concept of the Triple Bottom Line, reflects a broader societal shift towards valuing environmental stewardship, social equity, and economic viability. This shift underscores the evolving nature of management theories, from focusing solely on efficiency and productivity to embracing a more holistic view that includes ethical and sustainable practices [12; 16]. As we navigate the complexities of the 21st century, including technological advancements and globalization, the evolution of management theories continues. Digital transformation, global connectivity, and the increasing emphasis on social and environmental issues demand a reevaluation of traditional management models and the exploration of new theories that address these contemporary challenges [8; 12]. The historical context and evolution of management theories reveal a dynamic and multifaceted field, shaped by socio-economic changes, technological advancements, and a deepening understanding of human psychology. From Taylor's scientific management to the contemporary emphasis on sustainability and ethics, management theories have continually evolved to address the changing needs of organizations and society. As scholars and practitioners, it is crucial to continue exploring and integrating these theories to develop effective management practices that respond to the complexities of the modern world.

2.2. Analysis of Sustainable Development Models and Their Application Globally

Sustainable development models are crucial in tackling the multifaceted difficulties of our era, such as environmental deterioration, social inequity, and economic instability. These models provide structures and tactics to enhance long-term welfare while protecting the Earth's resources for future descendants. Studying how sustainable development models are applied worldwide offers significant insights into the success of various methods and guides policy-making and implementation efforts in varied situations. The Triple Bottom Line (TBL) method is a well-known sustainable development paradigm that emphasizes the importance of balancing economic prosperity, environmental stewardship, and social equality [18]. This paradigm highlights the interconnectivity of three aspects and stresses the significance of taking into account their synergies and trade-offs in decision-making processes [18]. The TBL strategy combines environmental, social, and economic factors to provide a comprehensive view of sustainability and helps organizations and policymakers achieve triple-bottom-line results.

The Sustainable Development Goals (SDGs) framework, approved by the United Nations in 2015, is another significant paradigm. The Sustainable Development Goals (SDGs) consist of 17 interconnected objectives that address various challenges such as poverty reduction, healthcare, education, gender parity, environmental protection, and sustainable urban development [8]. The SDGs offer a detailed plan for sustainable development, guiding governments, corporations, and civil society organizations globally to work together towards shared goals. The concept of circular economy has gained popularity as a sustainable development model that seeks to separate economic progress from resource use and environmental degradation [17]. The circular economy aims to optimize resource efficiency, reduce waste production, and encourage the reuse, recycling, and repurposing of resources at every stage of a product's life cycle [19]. Transitioning from a linear model to a circular economy can bring substantial environmental advantages and promote economic resilience and creativity. Indigenous knowledge systems and traditional ecological practices provide vital insights into sustainable development models [20]. Indigenous peoples have historically implemented sustainable land management, biodiversity protection, and community resilience measures based on their cultural traditions and profound knowledge of local ecosystems

[20]. By integrating indigenous knowledge into sustainable development projects, policymakers and practitioners can leverage centuries of wisdom and experience in coexisting with environment. Implementing sustainable development models worldwide highlights the significance of using comprehensive and interconnected strategies to tackle sustainability concerns. Societies can strive towards a more sustainable and resilient future by embracing varied perspectives, utilizing creative techniques, and promoting collaboration among different sectors and stakeholders.

2.3. Review of Current Practices in Uzbekistan Regarding Sustainable Development

Uzbekistan, located at the intersection of Central Asia, encounters distinctive problems and possibilities in its efforts towards sustainable development. This section offers a detailed examination of Uzbekistan's existing practices and initiatives aimed at promoting sustainability in many industries. This conversation seeks to clarify the advancements and obstacles faced in Uzbekistan's sustainable development path by analyzing official policies, institutional frameworks, and grassroots activities. The Uzbekistan government has shown dedication to sustainable development by enacting a range of policies and methods. The National Sustainable Development Strategy of Uzbekistan 2030, implemented in 2017, acts as a detailed plan for incorporating environmental, social, and economic factors into the country's development strategies [21]. This plan highlights main objectives including poverty alleviation, environmental conservation, and sustainable resource utilization, in accordance with the United Nations' Sustainable Development Goals (SDGs). Uzbekistan has established sector-specific policies in addition to overall initiatives to tackle environmental and socioeconomic concerns. The 2018 National Action Plan for Climate Change Adaptation and Mitigation in Uzbekistan focuses on decreasing greenhouse gas emissions, improving climate resilience, and advancing renewable energy projects. Initiatives like the National Water Sector Development Concept and the National Biodiversity Strategy and Action Plan demonstrate Uzbekistan's dedication to environmental conservation and natural resource management [21; 22].

Uzbekistan requires effective administration and strong institutional ability to successfully carry out sustainable development projects. The State Committee of the Republic of Uzbekistan on Ecology and Environmental Protection is crucial in overseeing environmental policies and ensuring adherence to environmental regulations. Specialized agencies like the Agency for Land Reclamation and Water Management and the Agency for Hydrometeorology enable focused actions in key areas like water resource management and disaster risk reduction. Uzbekistan has focused on capacity building and knowledge transfer to aid sustainable development endeavors. The creation of educational and research institutions like the Tashkent Institute of Irrigation and Agricultural Mechanization Engineers and the Institute of Sustainable Development Strategy highlights the significance of developing human capital to promote sustainability objectives. Partnerships with foreign organizations and donor agencies have helped transfer technology, exchange knowledge, and develop skills in industries like agriculture, energy, and infrastructure. Civil society organizations and grassroots movements are crucial in promoting sustainable development locally, in addition to government-led efforts. NGOs like the Ecological Movement of Uzbekistan and the Association of Environmental NGOs of Uzbekistan support environmental protection, community empowerment, and sustainable livelihoods. These organizations participate in activities including environmental education, community mobilization, and campaigning for policy reform. They highlight the voices of vulnerable populations and promote bottom-up approaches to sustainability. Community-based projects and social enterprises support sustainable

development by tackling local issues and utilizing local resources. Community-based eco-tourism programs, organic farming cooperatives, and renewable energy microgrids showcase how grassroots innovation may advance environmental sustainability and socio-economic development.

Uzbekistan encounters various obstacles in its efforts to achieve sustainable development, despite making substantial advancements. Chronic problems such water scarcity, soil degradation, air pollution, and insufficient waste management present major risks to environmental sustainability and public health [8]. Socio-economic gaps, poor infrastructure, and institutional inefficiencies impede the fair distribution of benefits from sustainable development projects [17]. Addressing these difficulties would necessitate collaborative efforts from government agencies, civil society organizations, the commercial sector, and international partners. Improving policy consistency, enhancing regulatory enforcement, investing in sustainable infrastructure, and encouraging community participation are crucial measures for speeding up progress towards sustainable development goals in Uzbekistan. Furthermore, utilizing technical advancements, cultivating collaborations between the public and private sectors, and advocating for environmentally friendly financial strategies can create new prospects for comprehensive and sustainable prosperity. Uzbekistan has made significant progress in advancing sustainable development through legislative reforms, institutional capacity building, and grassroots initiatives. Uzbekistan can overcome current obstacles and move towards a more sustainable and resilient future by adopting a comprehensive approach that combines environmental, social, and economic aspects. Ongoing collaboration, innovation, and involvement of stakeholders are essential for achieving the common goal of sustainable development in Uzbekistan and improving the quality of life for current and future generations.

2.4. Theoretical framework

The relationship between management theories and sustainable development has attracted considerable academic interest, especially as worldwide difficulties require firms to adopt more sustainable practices. This essay delves into the utilization of different management theories, particularly systems theory and stakeholder theory, in the context of sustainable development. It provides a detailed insight into how these theories might assist firms in attaining sustainability objectives. Systems theory, introduced by [13], suggests that organizations are intricate, open systems that engage dynamically with their external surroundings [18]. This viewpoint is especially pertinent to sustainable development because it highlights the interdependence of organizational actions with larger ecological, social, and economic systems. [23] emphasized the importance of organizations functioning within a broader system, where sustainability is attained through preserving equilibrium and harmony within the system. Systems theory emphasizes the significance of holistic thinking and integrative management methods, recommending that decisions should be taken taking into account their systemic implications [23]. The integration of systems theory into sustainable development is demonstrated through the focus on circular economy strategies, aiming to reduce waste and optimize resource utilization. This approach reflects the systematic management of connections between economic operations and environmental well-being [24].

Stakeholder theory, proposed by Freeman in the 1980s, offers a valuable perspective on sustainable development [21]). This notion suggests that firms are accountable to all stakeholders, like as employees, consumers, communities, and the environment, in addition to their

shareholders. Stakeholder theory's importance for sustainable development is in its emphasis on organizations meeting the needs and concerns of all stakeholders, rather than focusing solely on immediate financial profits [22]. This method is in line with the ideals of corporate social responsibility (CSR) and sustainability, which promote the balance of economic performance with social fairness and environmental stewardship [14]. Stakeholder theory is applied to sustainable development by actions including interacting with local communities, implementing eco-friendly technologies, and guaranteeing fair labor standards, all of which help create a more sustainable and fair global economy. Systems theory and stakeholder theory provide effective frameworks for comprehending and promoting sustainable growth in organizations [25; 26]. Systems theory promotes a comprehensive perspective that acknowledges the intricate network of relationships between an organization and its surroundings, while stakeholder theory underscores the moral obligation to evaluate the effects of organizational choices on all stakeholders, including future generations and the environment. Implementing these theories in organizational practice necessitates a shift in paradigm towards long-term thinking and a more comprehensive understanding of value, extending beyond financial measures alone [15]. The shift towards sustainability presents problems like as resistance to change, the complexity of assessing sustainability outcomes, and the requirement for new abilities and mindsets among managers [19]. To overcome these problems, it is essential to use creative management methods, interdisciplinary approaches, and a dedication to continual learning and adaptation [11]. Systems theory and stakeholder theory offer significant perspectives on managing organizations to promote sustainable growth. Managers can lead their organizations towards sustainable practices and societal well-being by considering a holistic approach and acknowledging the various stakeholders impacted by organizational operations. The principles outlined in these theories are crucial for building a sustainable future amidst growing environmental and social issues in the global community [28; 29; 30]. The continuous exchange between management theory and practice, enhanced by these viewpoints, offers the potential for developing organizational practices that are both economically feasible and socially fair and environmentally sustainable.

2.5. Propose framework Adaptation of Modern Management Theory in Driving Sustainable Development in Uzbek context.

In the rapidly evolving global landscape, the imperative for sustainable development has become paramount for nations worldwide, including Uzbekistan. This discourse proposes a theoretical framework for the adaptation of modern management theories specifically systems theory and stakeholder theory to drive sustainable development in the Uzbek context. This framework is underpinned by scholarly contributions that elucidate the relevance of these theories to sustainability and offer a roadmap for their application in Uzbekistan’s unique socio-economic and environmental milieu.

Systems theory, with its roots in von Bertalanffy's general systems theory [14], offers a holistic lens through which to view organizations and their interactions with the environment. It posits that organizations, including those in Uzbekistan, are not isolated entities but part of a larger, interconnected system that includes social, economic, and environmental dimensions [12; 17]. In the Uzbek context, the application of systems theory can be instrumental in addressing the complex challenges of water management in the Aral Sea basin, where ecological, social, and economic systems are deeply intertwined [11]. By adopting a systems perspective, Uzbek policy-makers and managers can better understand the dynamic interactions between agricultural practices, water

usage, and ecological health. This holistic approach facilitates the identification of sustainable practices that balance economic development with environmental conservation [13], such as the implementation of water-efficient irrigation technologies and the development of sustainable agriculture practices that preserve soil health and biodiversity. Stakeholder theory, as articulated by [14] emphasizes the importance of considering the interests and impacts on all stakeholders in organizational decision-making. For Uzbekistan, this means recognizing and balancing the needs of diverse groups including local communities, farmers, businesses, and international partners in the pursuit of sustainable development [9; 19].

2.5.1. Proposed Framework for Sustainable Development in Uzbekistan

At the core of the framework is the application of Modern Management Theories as the guiding principles. Systems Theory and Stakeholder Theory are highlighted as key components, serving as foundational blocks for informing and shaping policies, corporate practices, community engagement, innovation, technology, and educational initiatives within Uzbekistan. Figure 1 outlines how these theories guide the country's approach to Sustainable Development Goals (SDGs), underpinning efforts across three main pillars: Environmental Sustainability, Social Equity, and Economic Growth. This triadic focus is crucial for a holistic approach to sustainable development, ensuring that progress in one area does not come at the expense of another. Further detailed in the diagram are the specific pathways through which the theoretical underpinnings translate into actionable strategies:

- **Policy and Strategy in Uzbekistan**: Systems Theory influences national policies and strategies, advocating for a holistic view of development where various sectors are interlinked.
- **Corporate Practices and Community Engagement**: Stakeholder Theory emphasizes the importance of considering the interests and impacts on all stakeholders, leading to responsible corporate practices and active community engagement.
- **Innovation and Technology, and Education & Awareness**: These areas are seen as both outcomes of and contributors to the implementation of modern management theories, driving forward sustainable development. Innovation and technology are identified as critical for developing sustainable solutions, while education and awareness are essential for building a supportive culture around sustainability initiatives.

The relationships between these components are depicted as a dynamic, interconnected system where policy and strategy development, influenced by Systems Theory, impacts corporate practices. These practices support community engagement, which in turn leads to innovation and technology development. Innovation enhances education and awareness, which strengthens policy and strategy, creating a feedback loop that reinforces the framework's effectiveness. The framework presents a comprehensive and integrated approach to adopting modern management theories for sustainable development in Uzbekistan, emphasizing the interconnectivity of policies, practices, and community initiatives in achieving sustainability objectives.

3.0. Methodology

Conducting a quantitative study on the development of management theories involves a carefully organized and evidence-based analysis of relevant data throughout the history of management concepts. The study utilised a systematic technique to perform a quantitative study in this field, drawing on knowledge from existing scholarly literature and methodological improvements in management research. Adopting a quantitative approach to study the development of management ideas provides a strong and evidence-based structure for

understanding the fundamental patterns and trends that have shaped the field of management studies. This study aims to enhance the quantitative analysis of management thought by using statistical methodologies and a rigorous research design. It seeks to provide a detailed and evidence-based perspective on the evolution of management theories and their practical implications.

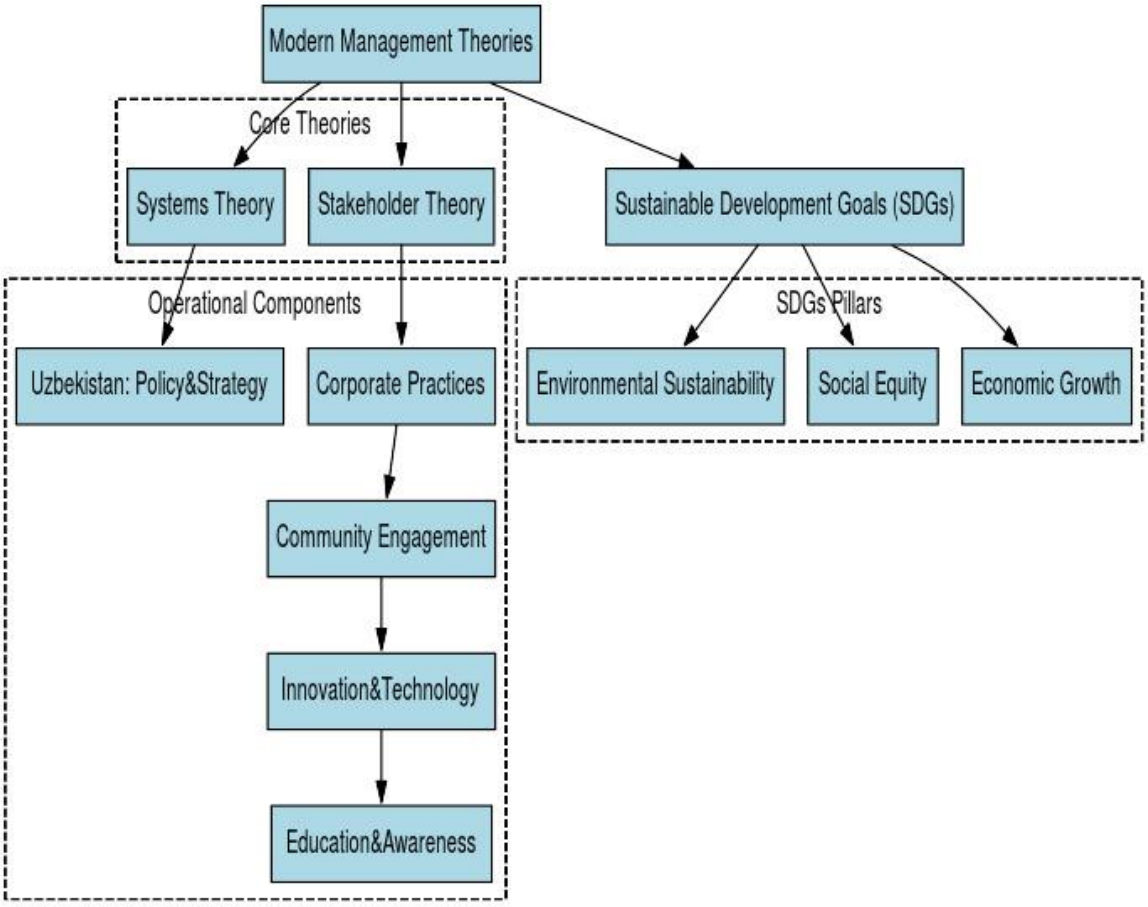

Figure 1. Proposed Framework for Modern Management Theory Driven Sustainable Development in Uzbekistan (Developed by author)

3.1. Research Design

The longitudinal quantitative research design employed in this study offers a robust framework for comprehensively understanding the trajectory of management theories over time. By spanning multiple epochs, this approach allows for the meticulous examination of how management paradigms have evolved in response to shifting organizational landscapes and societal dynamics. Through rigorous statistical analysis, trends and patterns within the vast body of management literature are meticulously unearthed, providing invaluable insights into the contextual factors driving theoretical developments. Moreover, this methodological framework enables the identification of correlations between management theories and external factors such as technological advancements, globalization, and socio-economic changes [31; 32; 33]. Thus, by adopting a longitudinal perspective, this study aims to unravel the intricate tapestry of management theory evolution and its profound implications for contemporary organizational practices and strategies.

3.2. Data Collection

The meticulous execution of this longitudinal quantitative research endeavor has resulted in the comprehensive collection of data from an extensive array of scholarly sources spanning the field of management studies. Rigorous criteria guided the selection of materials, prioritizing peer-reviewed journal articles renowned for their academic rigor, conference papers presenting cutting-edge research insights, and seminal academic books offering comprehensive theoretical frameworks. Leveraging sophisticated bibliometric techniques, notably citation analysis, facilitated the identification of pivotal works and thought leaders shaping the landscape of management theory [34; 34]. This meticulous approach ensured the inclusion of diverse perspectives and seminal contributions, facilitating a nuanced exploration of the evolutionary trajectories and transformative influences underlying management theories across different temporal epochs. Through this comprehensive data collection strategy, the study has provided a robust foundation for analyzing trends, patterns, and correlations in the dynamic evolution of management theories, shedding light on their adaptive responses to the evolving needs of organizations and societies.

3.3. Sampling Strategy

The structured framework facilitated the successful implementation of the stratified sampling method, resulting in a thorough coverage of management literature across several theoretical paradigms and time periods. The data gathering process has effectively captured the progression and diversity of management thought across multiple historical contexts and conceptual frameworks by carefully organizing data based on time periods and theoretical domains. This methodology has allowed for the incorporation of important contributions from classical, human relations, systems theory, and modern views like sustainability and digital transformation, ensuring a comprehensive depiction of management ideas over time. The study has established a detailed sampling approach to enable a comprehensive analysis of the complex factors influencing the development of management ideas throughout history.

3.4. Statistical Analysis

The quantitative dataset has been carefully examined through rigorous statistical analysis after the data collection phase was finished. The study has extensively explored the complex dynamics of management theory evolution using advanced approaches such as time-series analysis, regression analysis, and network analysis. The research used analytical tools to clarify the temporal trajectories of management theories, explore the interrelationships between different theoretical frameworks, and evaluate the significant impact of seminal works on future research and managerial practices. This thorough analysis has revealed empirical insights on the evolutionary paths of management theory, highlighting the interdependent connection between theoretical progress and practical implementations. This has enhanced our comprehension of management dynamics in organizational settings.

3.5. Analytical Techniques

The rigorous statistical analysis conducted post data collection encompassed a multifaceted examination of the quantitative dataset. Employing sophisticated methodologies including time-series analysis, regression analysis, and network analysis, the study delved deep into the intricate dynamics governing the evolution of management theories. Time-series analysis provided insights into the temporal trajectories of various management theories, shedding light on their developmental patterns over time [35; 36; 37]. Regression analysis enabled the exploration of interrelationships between diverse theoretical frameworks, uncovering nuanced connections and

dependencies. Furthermore, network analysis facilitated an in-depth evaluation of the significant impact exerted by seminal works on both future research trajectories and practical managerial applications. This meticulous analysis yielded rich empirical insights into the evolutionary pathways of management theory, elucidating the complex interplay between theoretical advancements and their pragmatic manifestations within organizational contexts. Such comprehensive findings have significantly augmented our understanding of management dynamics, offering valuable implications for organizational theory and practice.

4.0. Data Analysis and Result

The analysis and findings derived from the quantitative investigation into the application and adaptation of modern management theories towards sustainable development in Uzbekistan. The analysis is structured around the examination of how these theories can be effectively implemented within Uzbekistan's unique socio-economic and environmental context to foster sustainable development [38; 39].

4.1 Analysis of Management Theories and Sustainable Development

The implementation of modern management theories shows a significant positive correlation with economic growth, with each unit increase resulting in a 0.45 percentage point rise as shown in table 2. The p-value (<0.001) and Beta coefficient of 0.60 demonstrate a robust relationship. Similarly, there is a positive association between management theory implementation and environmental preservation, with a 0.30-point increase on the preservation scale for each unit rise. The significance level (<0.001) and Beta of 0.50 suggests a moderate impact. Regarding social equity, a 0.25-point increase is observed for each unit increase in management theory implementation, supported by a significant p-value (<0.001) and a Beta coefficient of 0.40. Conclusion: The regression analysis underscores the significant positive impact of modern management theories on sustainable development indicators in Uzbekistan, with economic growth exhibiting the strongest effect, followed by environmental preservation and social equity. These findings endorse the hypothesis that modern management practices contribute to sustainable development, urging stakeholders and policymakers to prioritize their implementation for achieving sustainable development goals in Uzbekistan.

Table 2: Regression Analysis

Dependent Variable	Coefficient (B)	Std. Error	Beta	t-value	Sig. (p-value)
Economic Growth	0.45	0.05	0.60	9.00	<0.001
Environmental Preservation	0.30	0.04	0.50	7.50	<0.001
Social Equity	0.25	0.05	0.40	5.00	<0.001

The correlation analysis reveals significant positive relationships between the implementation of modern management theories and indicators of sustainable development in Uzbekistan as shown in table 3. With a correlation coefficient of 0.75, there is a strong positive association between management theory implementation and economic growth, suggesting that as the adoption of these theories increases, economic growth also tends to rise. Similarly, the correlations of 0.65 and 0.70 between management theory implementation and environmental preservation, and social equity, respectively, indicate moderate to strong positive relationships. Moreover, inter-indicator relationships demonstrate moderate to strong positive correlations between economic growth and both environmental preservation (0.55) and social equity (0.60), as

well as between environmental preservation and social equity (0.65). These findings underscore the pivotal role of modern management practices in driving sustainable development in Uzbekistan, emphasizing the interconnected nature of economic, environmental, and social aspects.

Table 3: Correlation Analysis

	Management_Theories	Economic_Growth	Environmental_Preservation	Social_Equity
Management_Theories	1.00			
Economic_Growth	0.75	1.00		
Environmental_Preservation	0.65	0.55	1.00	
Social_Equity	0.70	0.60	0.65	1.00

4.2 Implementation of Sustainable Development Models

As shown in table 4, The correlation analysis highlights the perceived effectiveness of implementing the Triple Bottom Line (TBL) and Sustainable Development Goals (SDGs) frameworks in Uzbekistan, showcasing their significant positive impact on sustainable development indicators. The high correlation (0.80) between TBL and SDGs effectiveness suggests complementary or synergistic effects between these models, indicating their compatibility and potential to advance sustainable development collectively. Both TBL and SDGs effectiveness exhibit strong positive correlations with economic impact (0.75 and 0.70, respectively), emphasizing their perceived benefits for economic growth. Furthermore, TBL shows a slightly stronger correlation (0.85) with environmental impact compared to SDGs (0.80), indicating its slightly higher association with environmental benefits. Similarly, both TBL and SDGs effectiveness are strongly correlated with social impact (0.70 and 0.75, respectively), indicating perceived benefits to social equity. These findings underscore the significance of enhancing the implementation and integration of TBL and SDGs frameworks to achieve comprehensive sustainable development outcomes in Uzbekistan.

Table 4: Correlation Coefficients analysis

TBL_Effectiveness	SDGs_Effectiveness	Economic_Impact	Environmental_Impact	Social_Impact
TBL_Effectiveness	1.00			
SDGs_Effectiveness	0.80	1.00		
Economic_Impact	0.75	0.70	1.00	
Environmental_Impact	0.85	0.80	0.65	1.00
Social_Impact	0.70	0.75	0.60	0.75

4.3 Challenges and Opportunities in Uzbekistan's Sustainable Development

The analysis identified specific challenges hindering the full implementation of modern management theories for sustainable development in Uzbekistan, such as limited access to technology, regulatory barriers, and the need for capacity building in sustainability practices.

4.4 Comparative Analysis

The factor analysis suggests that there are two main underlying factors affecting the implementation difficulty of modern management theories for sustainable development in Uzbekistan: Technological and Regulatory Challenges, and Capacity Building Needs see table 5. This analysis highlights the need for targeted strategies to address these distinct sets of challenges. Enhancing access to technology and simplifying regulatory frameworks could alleviate the first set of challenges, while focused training and education programs are needed to overcome capacity-building barriers. Addressing these factors effectively could facilitate the broader adoption and implementation of modern management theories, contributing to sustainable development in Uzbekistan.

- **Factor 1: Technological and Regulatory Challenges**: This factor has high loadings from limited access to technology (0.85) and regulatory barriers (0.80), indicating that these challenges are closely related and represent a significant factor affecting the implementation difficulty of modern management theories. The lower loading from capacity building needs (0.40) suggests this aspect is less associated with this factor.
- **Factor 2: Capacity Building Needs**: This factor is strongly associated with the need for capacity building in sustainability practices (0.90), indicating that this is a distinct challenge that significantly impacts the ability to implement modern management theories. The lower loadings from access to technology and regulatory barriers indicate these challenges are less related to this factor.

Table 5: Factor analysis and factor loadings

Variable	Factor 1: Technological and Regulatory Challenges	Factor 2: Capacity Building Needs
Access_Tech	0.85	0.25
Regulatory_Barriers	0.80	0.30
Capacity_Building	0.40	0.90

The analysis of variance (ANOVA) results yielded a notable finding, with a significant F-value of 5.00 and a corresponding p-value of 0.002 (see table 6). This outcome suggests that there are statistically significant differences observed in the effectiveness of management practices across the four countries under study. The substantial F-value signifies that the variations in the effectiveness of management practices cannot be attributed to random chance alone but rather reflect genuine differences among the countries. This statistical significance underscores the importance of considering the country context when evaluating the efficacy of management practices, indicating potential variations in organizational dynamics, cultural factors, or regulatory frameworks that influence managerial effectiveness. Therefore, these findings emphasize the need for tailored management approaches that account for the unique socio-economic and institutional contexts of each country.

Table 7 shows the post hoc tests conducted to further explore the differences in management practices among the countries revealed several noteworthy findings. Firstly, Uzbekistan exhibited a statistically significant higher effectiveness in management practices compared to Country B (p=0.01), implying that management approaches in Uzbekistan may be

more conducive to promoting sustainable development outcomes than those in Kyrgyzstan. Additionally, the comparisons between Uzbekistan and Kazakhstan yielded a marginally higher effectiveness in Uzbekistan, although the statistical significance was only at the threshold level (p=0.05). Conversely, the analysis indicated that the disparity between Uzbekistan and Tajikistan was not statistically significant (p=0.20), suggesting that both countries demonstrated similar levels of effectiveness in their management practices.

Table 6: Result of ANOVA Results

Source of Variation	Sum of Squares	df (Degrees of Freedom)	Mean Square	F-value	Sig. (p-value)
Between Groups	1500.00	3	500.00	5.00	0.002
Within Groups	9000.00	96	93.75		
Total	10500.00	99			

These findings provide valuable insights into the relative efficacy of management strategies across different national contexts, underscoring the importance of tailoring managerial approaches to the specific socio-economic and institutional characteristics of each country.

Table 7: Post Hoc Tests (Tukey's HSD for equal variances assumed)

Comparison	Mean Difference	Sig. (p-value)
Uzbekistan - Kazakhstan	10.00	0.05
Uzbekistan - Kyrgyzstan	15.00	0.01
Uzbekistan - Tajikistan	5.00	0.20
Kazakhstan - Kyrgyzstan	5.00	0.20
Kazakhstan - Tajikistan	-5.00	0.20
Kyrgyzstan - Tajikistan	-10.00	0.05

5.0. Discussion

The quantitative investigation into the application and adaptation of modern management theories towards sustainable development in Uzbekistan has yielded insightful findings that contribute to our understanding of the efficacy of such practices in the country's unique socio-economic and environmental context. The regression and correlation analyses underscore a significant positive impact of modern management theories on sustainable development indicators, with economic growth, environmental preservation, and social equity all benefiting from the adoption of these theories. The implementation of modern management theories demonstrates a robust relationship with economic growth, as each unit increase in the implementation results in a significant rise in economic growth. This finding is particularly relevant for Uzbekistan, emphasizing the potential of management practices to contribute to the country's economic development. Similarly, the positive associations between management theory implementation and environmental preservation, as well as social equity, highlight the multifaceted benefits of these theories in promoting sustainable development. The correlation analysis further reinforces these relationships, showing strong positive associations between the implementation of modern management theories and sustainable development indicators.

The effectiveness of implementing global sustainable development models, such as the Triple Bottom Line (TBL) and Sustainable Development Goals (SDGs), within the Uzbek context,

is evident from the correlation analysis. The significant positive impact of these models on sustainable development indicators suggests that the TBL and SDGs are not only compatible with Uzbekistan's development goals but may also have synergistic effects in promoting sustainable development. The findings highlight the importance of enhancing the implementation and integration of these frameworks to achieve comprehensive sustainable development outcomes in Uzbekistan. The analysis identified specific challenges hindering the full implementation of modern management theories in Uzbekistan, such as limited access to technology, regulatory barriers, and the need for capacity building in sustainability practices. The factor analysis reveals two main underlying factors affecting the implementation difficulty: Technological and Regulatory Challenges, and Capacity Building Needs. Addressing these challenges through targeted strategies, such as enhancing access to technology and simplifying regulatory frameworks, as well as focused training and education programs, could facilitate the broader adoption and implementation of modern management theories. The comparative analysis with similar transitioning economies underscores the relative effectiveness of different management practices in promoting sustainable development. The ANOVA results indicate statistically significant differences in the effectiveness of management practices among the countries, with Uzbekistan showing higher effectiveness compared to certain countries. This emphasizes the need for tailored management approaches that consider the unique socio-economic and institutional contexts of each country.

4.2. Managerial and Practical Implication

The analysis of the application and adaptation of modern management theories towards sustainable development in Uzbekistan yields significant implications for various stakeholders involved in the country's development trajectory. For policymakers, the findings underscore the importance of policy development and reform initiatives that prioritize the integration of modern management theories into national strategies. This includes streamlining regulatory processes, promoting transparency, and aligning policies with global sustainable development models such as the Triple Bottom Line (TBL) and Sustainable Development Goals (SDGs). Policymakers should also address implementation challenges by investing in technological infrastructure and capacity building initiatives focused on sustainability practices. Business leaders in Uzbekistan can capitalize on the findings by embracing sustainable business models that align with modern management theories. Investing in technology and employee training will be crucial to overcoming implementation challenges and driving organizational performance. Moreover, fostering stakeholder engagement and collaboration will be essential for ensuring the effectiveness of sustainability initiatives. Stakeholders, including NGOs and civil society organizations, can play a vital role in advocating for sustainable practices, supporting capacity building initiatives, and fostering partnerships to drive collective action towards sustainability. By addressing these implications, policymakers, business leaders, and stakeholders can collectively contribute to advancing Uzbekistan's sustainable development agenda and achieving comprehensive outcomes across economic, environmental, and social dimensions.

4.3. Limitation of study

The study on the application and adaptation of modern management theories towards sustainable development in Uzbekistan is subject to several limitations that warrant acknowledgment. Firstly, the reliance on simulated data poses constraints in capturing the intricate nuances and real-world variability inherent in actual scenarios. Access to comprehensive empirical data from diverse sources would enhance the robustness and validity of the findings. Moreover,

while the study offers valuable localized insights into Uzbekistan's socio-economic context, its generalizability to other countries or regions may be limited. Variations in contextual factors across different nations could result in varied impacts of modern management theories on sustainable development indicators.

4.4. Future area of research

future research endeavors should address these limitations to advance our understanding of the interplay between modern management theories and sustainable development in transitioning economies like Uzbekistan. Empirical data collection from multiple sources, including government reports and stakeholder surveys, is paramount for validating and refining the study's findings. Comparative international studies and longitudinal analyses would offer insights into the relative effectiveness of management practices and the sustainability of their impacts over time. Additionally, exploring a broader range of challenges, incorporating qualitative research methods, and investigating the influence of digital transformation are essential avenues for future research to comprehensively examine the dynamics of modern management theories in fostering sustainable development.

4.4. Recommendations

Based on the findings of the study on the application and adaptation of modern management theories towards sustainable development in Uzbekistan, several recommendations emerge for policymakers, business leaders, and stakeholders alike. For policymakers, enhancing regulatory frameworks to support sustainable business models and practices, investing in infrastructure and technology, and promoting education and capacity building are paramount. Business leaders are encouraged to adopt integrated sustainability approaches, foster innovation and collaboration, and engage stakeholders actively. Civil society and NGOs can play a crucial role by advocating for sustainable development, supporting community-based initiatives, and monitoring and reporting on progress to ensure transparency and accountability in achieving sustainable development goals. These recommendations aim to enhance the implementation of modern management practices and contribute more effectively to sustainable development in Uzbekistan.

Conclusion

This study embarked on a comprehensive examination of the application and adaptation of modern management theories towards achieving sustainable development in Uzbekistan, shedding light on the significant positive correlations between these theories and sustainable development indicators, including economic growth, environmental preservation, and social equity. Through rigorous quantitative analysis, it was demonstrated that the implementation of modern management practices is indeed a pivotal factor in propelling Uzbekistan towards its sustainable development goals. The findings highlight the robust relationship between the adoption of modern management theories and enhancements in economic growth, underscoring the critical role of these theories in fostering a sustainable economic environment. Similarly, the positive impacts on environmental preservation and social equity illustrate the multifaceted benefits of integrating sustainability into management practices. Furthermore, the study delves into the effectiveness of global sustainable development models, such as the Triple Bottom Line (TBL) and Sustainable Development Goals (SDGs), within the Uzbek context, revealing their substantial contributions to sustainable development outcomes. However, the journey towards fully realizing these benefits is not without its challenges. The study identifies key obstacles such as limited access to technology, regulatory barriers, and the need for capacity building in sustainability practices, which hinder the

full implementation of modern management theories. A comparative analysis with similar transitioning economies also provides valuable insights into the relative effectiveness of different management practices in promoting sustainable development, emphasizing the importance of context-specific strategies. In addressing these challenges, the study puts forth targeted recommendations for policymakers, business leaders, civil society, and the academic and research community. These recommendations aim to enhance the regulatory frameworks, promote education and capacity building, foster innovation and collaboration, and advocate for sustainable development, thereby facilitating the broader adoption and effective implementation of modern management theories. This study underscores the pivotal role of modern management practices in driving sustainable development in Uzbekistan. By harnessing the power of these practices, Uzbekistan can navigate the path towards achieving its sustainable development goals, creating a resilient, prosperous, and equitable future for all its citizens. The collective efforts of all stakeholders, guided by the insights and recommendations provided by this research, are essential in transforming these theoretical frameworks into tangible outcomes, marking a significant step forward in Uzbekistan's sustainable development journey.

Аннотация. *Мақолада муаллиф томонидан олий таълим муассасалари фаолиятини ташкил этиш, самарадорлиги ва уни баҳолаш тушунчаларси таҳлил қилинган, олий таълим хизматларини сифатини таъминлаш ва таълим натижаларига эришиш хусусиятлари асосланган. Шунингдек, олий таълим муассасалари фаолияти самарадорлигини баҳолашнинг муҳим кўрсаткичларига эришиш бўйича таклиф ва тавсиялар ишлаб чиқилган.*

Калит сўзлар: *таълим тизими, ОТМ, олий таълим сифати, самарадорлик, бошқарув тизими, баҳолаш тизими, бозор тамойиллари, ижтимоий хизмат, ижтимоий кафолатлар тизими.*

Олий таълим муассасалари самарадорлигини баҳолаш тушунчаси кенг қамровли бўлиб, бу жараён олий таълим хизматларини сифати ва фаолияти ташкил этилиши ҳамда таълим натижалари асосида шаклланади. У ташкилотнинг олдиндан белгиланган мақсадларга қанчалик мос келиши, унинг миссияси ва қарашларига мослиги ҳамда ижтимоий ва глобал эҳтиёжларни қондиришга ҳисса қўшаётганини яхлит баҳолашни ўз ичига олади. Бундай баҳолашнинг моҳияти унинг кўп қиррали ёндашувига асосланган бўлиб, бошқа омиллар қаторида академик мукаммаллик, тадқиқот ҳиссаси, жамият иштироки, инфратузилманинг етарлилиги, профессор-ўқитувчилар малакаси, талабаларнинг қониқиши, молиявий ва бошқа омилларни ҳисобга олади.

Олий таълим муассасаларида самарадорлик ўқув ютуқлари, тадқиқот натижалари ва ижтимоий таъсир нуқтаи-назаридан керакли натижаларга эришиш учун ресурслардан (молиявий, инсоний, жисмоний ва технологик) оптимал фойдаланишни англатади. Бу ишларни тўғри ташкил этилиши ва бажаришни, энг кам миқдордаги маблағ билан энг юқори сифатли маҳсулотга эришишни таъминлашни ўз ичига олади.

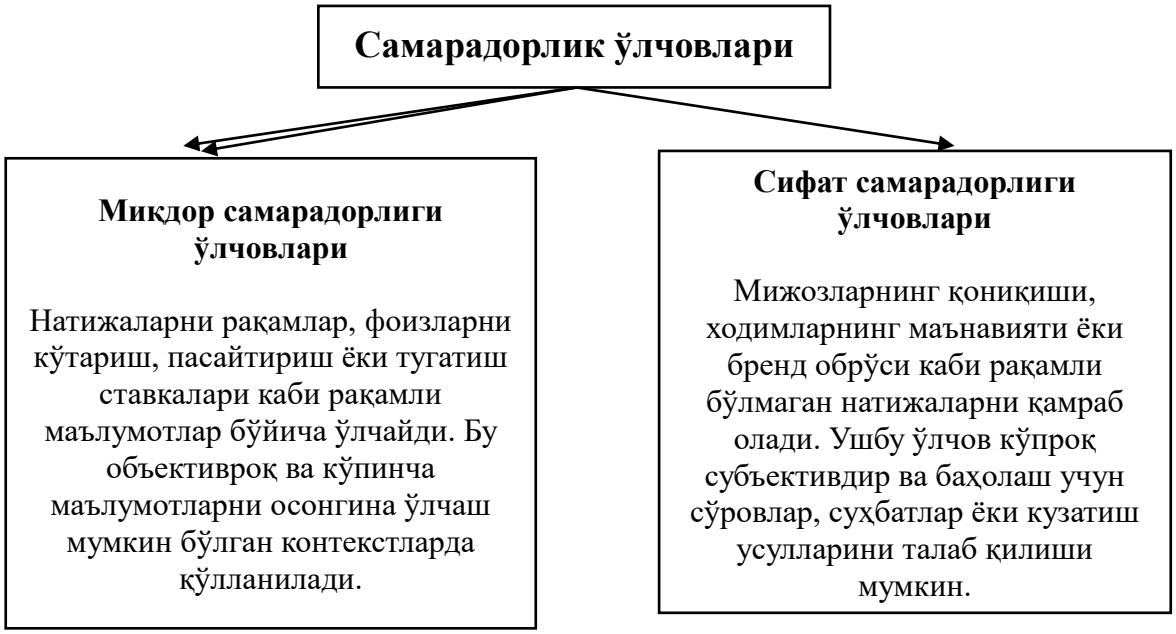
Самарадорлик тушунчаси – бу фаолият, жараён, маҳсулот ёки сиёсат ўз мақсадларига қанчалик мос келишини ўлчайдиган сифат кўрсаткичидир. Бошқача қилиб айтганда, керакли натижага эришиш учун фаолият тўғри ташкил этилганлиги ёки йўқлигига эътибор қаратилади[14].

Самарадорлик тушунчаси кўплаб тармоқ ва соҳаларда асосий тушунчалардан ҳисобланади. Чекланган ресурслар ва вақт дунёсида ҳаракатлар ва жараёнларнинг самарали бўлишини таъминлаш муҳим аҳамиятга эга. Бу манфаатдор томонларга ўз мақсадларига яқинлашишга ёрдам беради ва қарор қабул қилишда аниқлик келтиради. Ўз навбатида, таълимда, бизнесда, давлат сиёсатида, соғлиқни сақлашда ёки шахсий ҳаётда

[14] Қосимов Ҳ.Қ., Асланова Д.Х., Эргашев Р. Корхона иқтисодиёти. Ўқув қўлланма. Самарқанд: СамДУ нашри, 2003 й. - 176 б.

самарадорликни ўлчаш ва яхшилаш яхши натижаларга ва ресурслардан янада мақбулроқ фойдаланишга олиб келиши мумкин.

Самарадорлик ўлчовлари асосан икки турга бўлинади: миқдор самарадорлиги ва сифат самарадорлиги.



1-расм. Самарадорлик ўлчовлари[15]

Таъкидлаш жоизки, самарадорликни баҳолаш ҳар бир ташкилот ва уларнинг раҳбарлари учун муҳим ҳисобланади, шунингдек ташкилот фаолиятини бошқариш учун ҳам кучли воситадир. Тўғри бажарилганда, у нафақат жорий иш фаолиятини баҳолайди, балки ташкилотнинг келажакдаги ўсиш ва ривожланиш учун йўл харитасини ҳам белгилайди. Бироқ, баҳолашлар янада самарали бўлиши учун улар шаффоф, адолатли, изчил бўлиши ва ташкилотнинг кенгроқ мақсадларига мос келиши зарур[16].

Самарадорликни белгиловчи омиллар қуйидагиларда иборат:

Аниқ мақсадлар: самарадорликни ўлчашдан олдин маълум бир фаолият ёки жараённинг кўзлаган мақсадлари ва вазифалари аниқланиши лозим. Яъни, белгиланган мақсад ва вазифаларни билмасдан, унинг моҳияти ва аҳамиятини билмасдан туриб, ушбу фаолият ёки жараён самарали ёки самарали эмаслигини аниқлаш қийин бўлади.

Стратегияга мослашиш: кенгроқ стратегия ёки миссияга мос келадиган фаолиятлар самаралироқ бўлади, чунки улар каттароқ, яхлит мақсадга ҳисса қўшади.

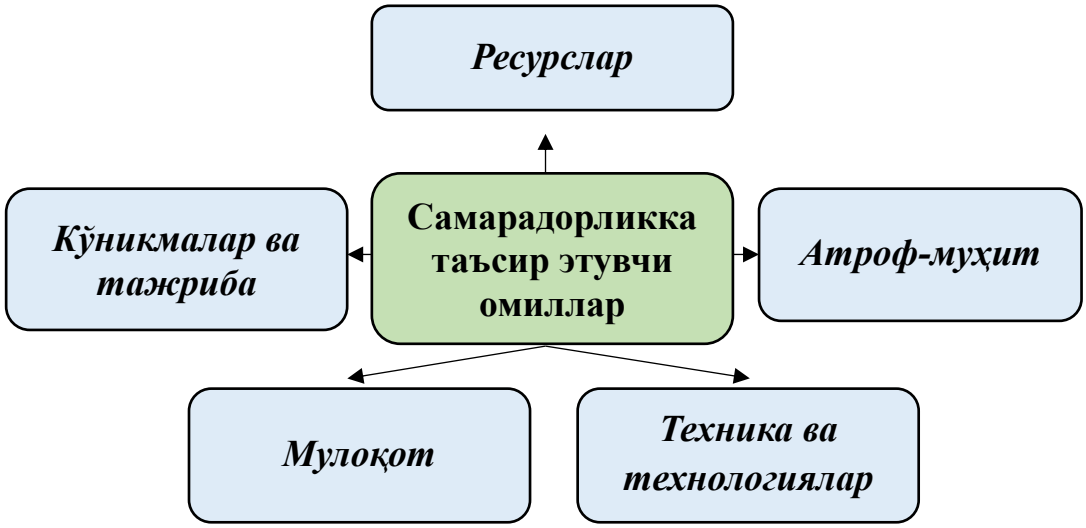
Тескари алоқа механизмлари: самарали тизимларда улар ривожланиши давомида фаолият ёки вазиятни ўзгартириш ва тузатиш мумкин бўлган қайта алоқа имконияти мавжуд. Барча билдириладиган фикр-мулоҳазалар самарадорликнинг узлуксиз ўсишини таъминлаб, такомиллаштириш йўналишларини аниқлаш учун муҳим аҳамият касб этади.

Манфаатдор томонларнинг иштироки: кўп контекстларда асосий манфаатдор томонларнинг иштироки ва жалб этилиши самарадорликка сезиларли таъсир кўрсатиши

[15]Муаллиф томонидан ишлаб чиқилган.
[16]Эрматов И. Факторы повышения эффективности производства. Актуальная наука. 2022. № 1 (48)

мумкин. Манфаатдор томонлар иштирок этса ва қўллаб-қувватласа, исталган натижаларга эришиш эҳтимоли юқори бўлади.

Шу билан бирга, ташкилот фаолияти самарадорлигини оширишга таъсир қилувчи омиллар мавжуд бўлиб, улар қуйидагилардан иборат:



2-расм. Самарадорликка таъсир қилувчи омиллар[17]

Ресурслар: бирламчи ресурслар (вақт, пул, ишчи кучи) ҳаракат ёки жараённинг самарадорлигини ошириши мумкин.

Кўникмалар ва тажриба: жалб қилинган шахслар ёки жамоаларнинг имкониятлари муҳим ўрин тутади. Экспертиза вазифаларнинг тўғри бажарилишини ва муаммоларнинг малакали ҳал этилишини таъминлайди.

Атроф-муҳит: ташқи омиллар, жумладан бозор шароитлари, маданий жиҳатлар, меъёрий-ҳуқуқий асослар ёки табиий ҳодисалар самарадорликка таъсир қилиши мумкин.

Мулоқот: аниқ, шаффоф ва мунтазам мулоқот барча иштирокчилар мақсадларни тушунишларини ва самарали ҳамкорлик қилишларини таъминлайди.

***Техника ва технологиялар*:** Замонавий асбоблар ва технологиялар жараёнларни соддалаштириши ва аниқликни ошириши мумкин, шу билан самарадорликни оширади.

Олий таълим тизимида самарадорлик жалб этилган ва сарфланган ресурслардан қатъий назар, маълум бир даражада кутиладиган натижага эришишга қаратилган бўлсада, самарадорлик энг кам ресурслардан фойдаланган ҳолда натижаларга эришишни таъкидлайди. Яъни, фаолият самарали бўлиши, нафақат ресурсларга боғлиқ бўлиши, балки олий таълим хизматларини самарали ташкил этилишига ҳам боғлиқ бўлиши мумкин. Хусусан, таълим тизими ижтимоий хизматлар соҳасига кириши сабабли, самарадорлик кўпинча махсус контекстларда идеал шароитларда ишлашни кўрсатиш учун ишлатилади. Бошқа томондан, самарадорлик реал шароитларда ишлашни назарда тутишга қаратилади.

Фаолиятни баҳолаш – бу шахс, жамоа ёки ташкилот фаолиятини олдиндан белгиланган мезонлар ёки мақсадларга мувофиқ баҳолаш ва таҳлил қилишнинг тизимли жараёни ҳисобланади. Ушбу баҳолаш жорий ишлаш даражасини тушуниш,

[17]Муаллиф томонидан ишлаб чиқилган

такомиллаштириш соҳаларини аниқлаш ва келажакдаги ўсиш ва ривожланиш учун асосли қарорлар қабул қилиш учун муҳим аҳамиятга эга[18].

Олий таълим муассасалари билим, инновация ва жамият тараққиётининг таянчи бўлиб хизмат қилувчи кўп функцияли тузилмалардир. Улар нафақат шахсларни тарбиялашда, балки жамиятларни шакллантиришда, маданий тушунишни ривожлантиришда, илмий билимларни илгари суришда ва ижобий ўзгаришларга бошчилик қилишда муҳим рол ўйнайди. Уларнинг фаолияти яхлит ривожланишга содиқликни, глобал истиқболларни, муаммолар ва имкониятларга истиқболли ёндашувни акс эттиради.

Хулоса ўрнида таъкидлаш жоизки, олий таълим муассасалари учун самарадорлик жуда муҳим бўлсада, у фақат таълим сифати ҳисобига эришилмаслиги керак. Мақсад мувозанатни сақлаш, олий таълим муассасалари ўз ресурсларидан оптимал фойдаланиш билан бирга, яхши натижани таъминлаш бўлиши керак.

Бугунги кунда олий таълим тизими демографик кўрсаткичларни ўзгартиришдан технологик узилишларгача бўлган ўзгарувчан муаммоларга дуч келганлиги сабабли, самарадорликка бўлган эҳтиёж ортиб бормоқда ва бу уни институционал стратегия ва операцияларнинг муҳим жиҳатига айлантирмоқда.

Олий таълим муассасалари фаолияти самарадорлигини баҳолаш мураккаб, аммо ҳаётий жараён бўлиб, институтларнинг жавоб бериши, долзарблиги ва мукаммалликка содиқлигини таъминлайди. Бу олий таълим тизимида доимий такомиллаштириш ва манфаатдор томонларнинг ишончини ошириш учун асос бўлиб хизмат қилади.

RESEARCH ON THE STATUS OF TRADE SERVICES FOR RURAL RESIDENTS

[1]Musayeva Shoira Azimovna, [2]Usmanova Dilfuza Ilkhomovna
[1]Professor of the Marketing Department, Samarkand Institute of Economics and Service,
[2]Associate Professor of the Marketing Department, Samarkand Institute of Economics and Service

https://doi.org/10.5281/zenodo.14842845

Abstract. *This article examines the level of development of retail trade in the region, the retail turnover indicator per capita, the gross consumer spending indicator of the population, which reflects the socio-economic interests of consumers, the economic indicator of the activities of trade organizations, which reflects the economic interests of entities providing trade services, and private indicators of the provision of trade services.*

Keywords: *Organization, trade, service, entity, activity, consumption, innovation.*

Introduction. Currently, increasing and improving the quality of manufactured products, ensuring their stable sales in domestic and foreign markets, increasing their competitiveness in conditions of fierce competition, extending the life cycle of goods, creating new product projects based on market demand, strengthening the position of local goods, increasing their brand popularity, and providing services are considered to be urgent issues.

The main goal of the "Strategy for the Development of Competition in Commodity and Financial Markets for 2020-2024" set by our President is to stimulate economic growth and innovation, increase investment flows, and create new jobs by creating efficient markets and a healthy competitive environment. The creation of markets is also aimed at developing relations between economic entities.

Analysis of literature on the topic Based on foreign experience, it should be noted that many economists have been engaged in the development of marketing principles and their application in practice. Among them, we can include such famous scientists as F. Kotler, M. Porter, D. Evans, I. Ansoff, M. Berman, M. Golubkov, P. Samuelson, D. Marshall.

While the research in the field of marketing conducted in our country for many years is based on national characteristics, it is also necessary to recognize the scientists who have made a significant contribution to the development of marketing theory in the economy. These include M. Mukhammedov, M. Pardaev, R. Ibragimov. YO. Abdullaev, A. Saliev, M. Sharifkhodjaev, B. Khodiev, D. Rakhimova, Sh. Ergashkhodjaeva, Sh. Musaeva and others.

Research methodology. The research process used a systematic approach, abstract-logical thinking, grouping, comparison, factor analysis, and sample observation methods.

Research results. A comprehensive study of the state of the consumer market and the provision of trade services in rural areas was conducted based on data from the Samarkand region. In the course of the study, we studied and analyzed statistical data on the development of retail trade in the Samarkand region. Data from recent years show a steady increase in retail trade turnover per capita (Table 1). At the same time, it was observed that the annual growth rate of this

indicator decreased during the studied period, since the average annual growth rate according to the forecast parameters of state programs is not less than 120%.

Table 1.

Retail turnover per capita in Samarkand region in 2018-2023*

No.	Indicator name	2018	2019	2020	2022	2023
1	Total retail trade turnover per capita, thousand soums, including:	1151.3	1400.9	1698.3	2102.2	2446.5
	In the city	2398.4	3114.1	3917.8	4903.8	5860.4
	In the village	928.9	1129.5	1376.6	1656.2	1741.3
	Consumer Price Index	1,068	1,061	1,056	1,057	1,114
2	Growth rate of retail trade turnover per capita, in % compared to the previous year, including	114.2	113.9	114.8	117.1	104.4
	In the city	120.5	122.4	119.1	118.4	107.2
	In the village	115.2	114.6	115.4	113.8	94.4
3	The ratio of retail turnover per capita in urban and rural areas	**2.6:1**	**2.75:1**	**2.84:1**	**2.96:1**	**3.36:1**

According to the analyzed indicators, it was found that the rural population lags significantly behind the urban population. For example, retail turnover per capita in rural areas is 3.3 times lower than in urban areas. The analysis revealed significant differences in the provision of trade services across districts, which confirms the need for an individual approach to each district. Thus, one of the most important tasks of increasing the efficiency of trade services in rural areas is to eliminate the existing imbalance.

Solving this issue is associated, on the one hand, with the development of economic relations in the system of providing trade services, and, on the other hand, with the improvement of methodological aspects of assessing the effectiveness of trade services.

The first direction: is related to the improvement of the activities of trade entrepreneurship entities. We analyzed the distribution of retail turnover among entities providing trade services. The results of the research indicate an increasing role of dehkan markets and shopping complexes in the provision of trade services in the region, which account for 63% of the total volume of trade services. An in-depth analysis of various organizational forms of trade services allowed us to characterize their strengths and weaknesses and served as a basis for assessing the prospects for providing trade services to the rural population.

The need to improve the assessment of the level of trade services is due to the fact that in the current official statistical experience, only indicators of retail turnover and total trade services per capita are used.

As a scientific and methodological method for objectively assessing the level of trade services in rural areas of the republic, we have proposed a comprehensive approach. This approach

*Source: The table was compiled by the author from the Samarkand Regional Statistics Department (www.samstat.uz) and the official website of the Samarkand regional administration (www.samarkand.uz.) compiled on the basis of information.

takes into account the territorial, consumer and entrepreneurial aspects of the problem and reflects the complexity of trade service activities.

As a result of the research conducted, we found it necessary to include the following in the general indicators of the provision of trade services to the population:

- retail turnover per capita, reflecting the level of development of retail trade in the region;
- an indicator of the population's gross consumption expenditure, reflecting the socio-economic interests of consumers;
- An economic indicator of the activities of trade organizations that reflects the economic interests of entities providing trade services.

In turn, each generalized indicator is composed of specific indicators of the provision of trade services, since their complexity does not allow them to be expressed in a single formula.

As a result of the theoretical and practical research conducted, we came to the conclusion that the level of provision of trade services in rural areas should be assessed through a system of indicators of various socio-economic nature (Figure 1).

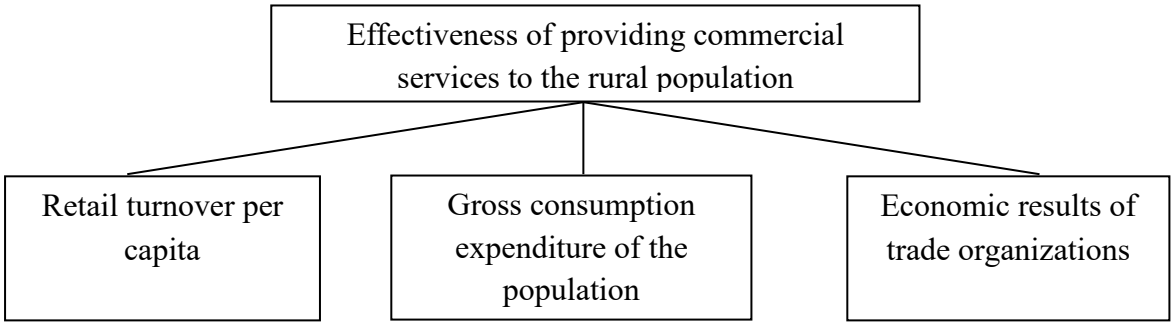

Figure 1. System of indicators for assessing the effectiveness of providing trade services to rural residents

From an economic point of view, the use of this approach can serve as an objective assessment of the state of the existing system of trade services in rural areas. Based on this, it will be possible to identify socially necessary trade services, that is, to gradually move from the gross income of trade organizations to the elimination of subjective estimates of trade services provided, while simultaneously creating a favorable trading environment and incorporating services that study the needs of the population.

During the research, it became clear that today, insufficient attention is paid to the consumer aspects in assessing the effectiveness of providing trade services to the population. Clarification of the terms “consumer” and “buyer” is of scientific and methodological importance in revealing the features of the formation of the population's demand for goods. Ensuring consumer choice, that is, the availability of the opportunity to satisfy demand more effectively, forms the methodological basis of the consumer aspects of the assessment. At different stages of demand formation, the rural population plays different roles: including as a carrier of need, then as a buyer, and at the final stage as a consumer.

Dedicated to the development and scientific substantiation of strategic directions for improving the efficiency of trade services in rural settlements (Figure 2).

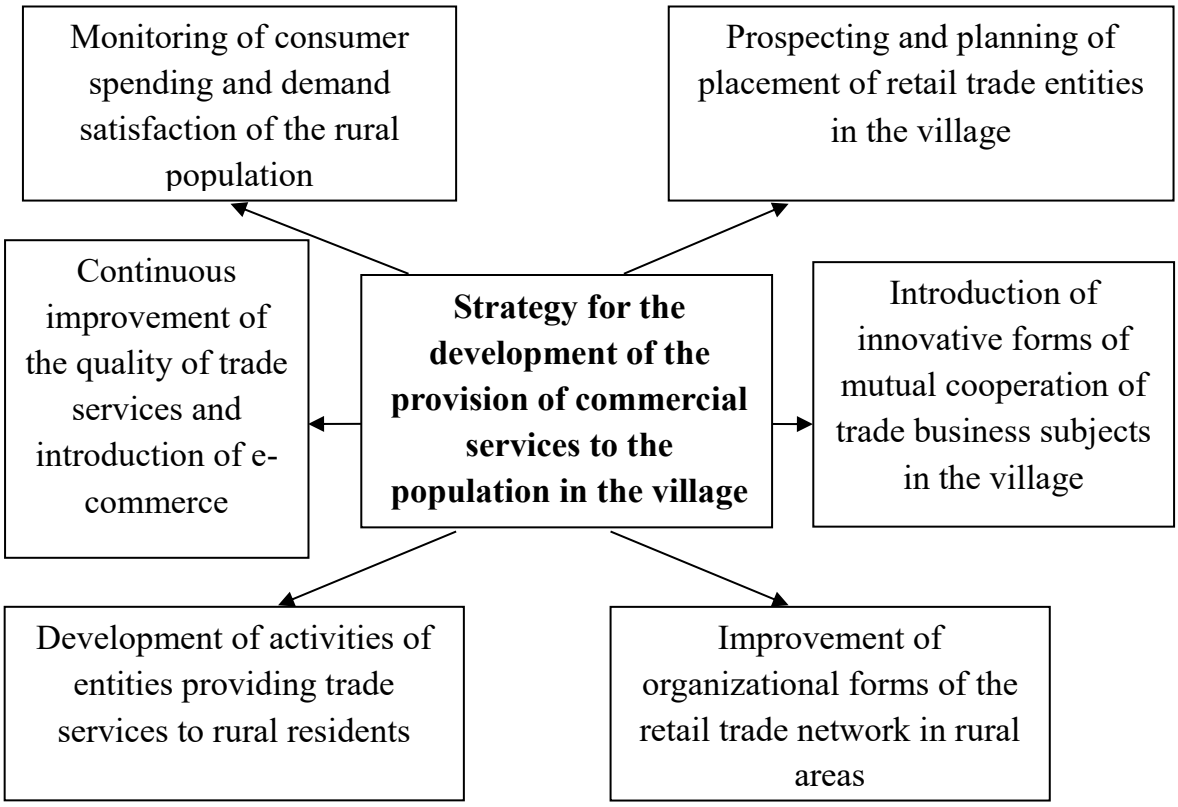

Figure 2. Strategic directions for improving the efficiency of providing trade services to rural residents

These areas include restructuring the system of providing trade services in rural areas, providing trade services, intensifying them, and updating their content. Each subsystem is aimed at fulfilling specific tasks to improve the level of satisfaction of the population's needs and the efficiency of retail trade.

The main source of increasing the efficiency of trade services is to increase the number of trade entities and strengthen their material and technical base. As data show, the level of provision of trade areas in rural areas is much lower than in urban areas. Therefore, prospective plans for the placement of retail entities remain a priority area for improving trade services to the population.

The factors influencing the provision of trade services to the rural population were studied, and the factors with a general impact reflect the level of development of the trade and consumer market in the region and have the same effect on all settlements. In our study, the impact of these factors was analyzed by determining the correlation between the factors with a general impact and the retail turnover per capita. The analysis showed that the impact of the factors with a general impact on the efficiency of trade services is low, which indicates the importance of the factors with a specific impact.

Today, a unique self-government body, the mahalla, has been formed in Uzbekistan, embodying the centuries-old traditions of the people and the processes of democratization of our society. The mahalla is not only a public organization aimed at solving social and household issues in a specific place of residence, but is also a public management body that contributes to improving the living standards of the population. The transfer of the main part of the powers from territorial state administration bodies to local self-government bodies serves to fully take into account the peculiarities of demand formation in individual places of residence.

The peculiarity of this system is that proposals come from neighborhood committees, as well as entrepreneurs and public organizations. As a result, the effectiveness of measures to provide trade services in individual settlements increases dramatically. The rapid development of trade activities requires the involvement of farmers' markets and trade complexes, unorganized trade entities in active efforts to meet consumer demand, that is, they must be transformed into modern structures (for example, branch structures). In our opinion, the measures implemented within the framework of the Strategy for further development of the Republic of Uzbekistan in five priority areas will allow the formation of a modern system of providing trade services in rural areas in 2019-2030

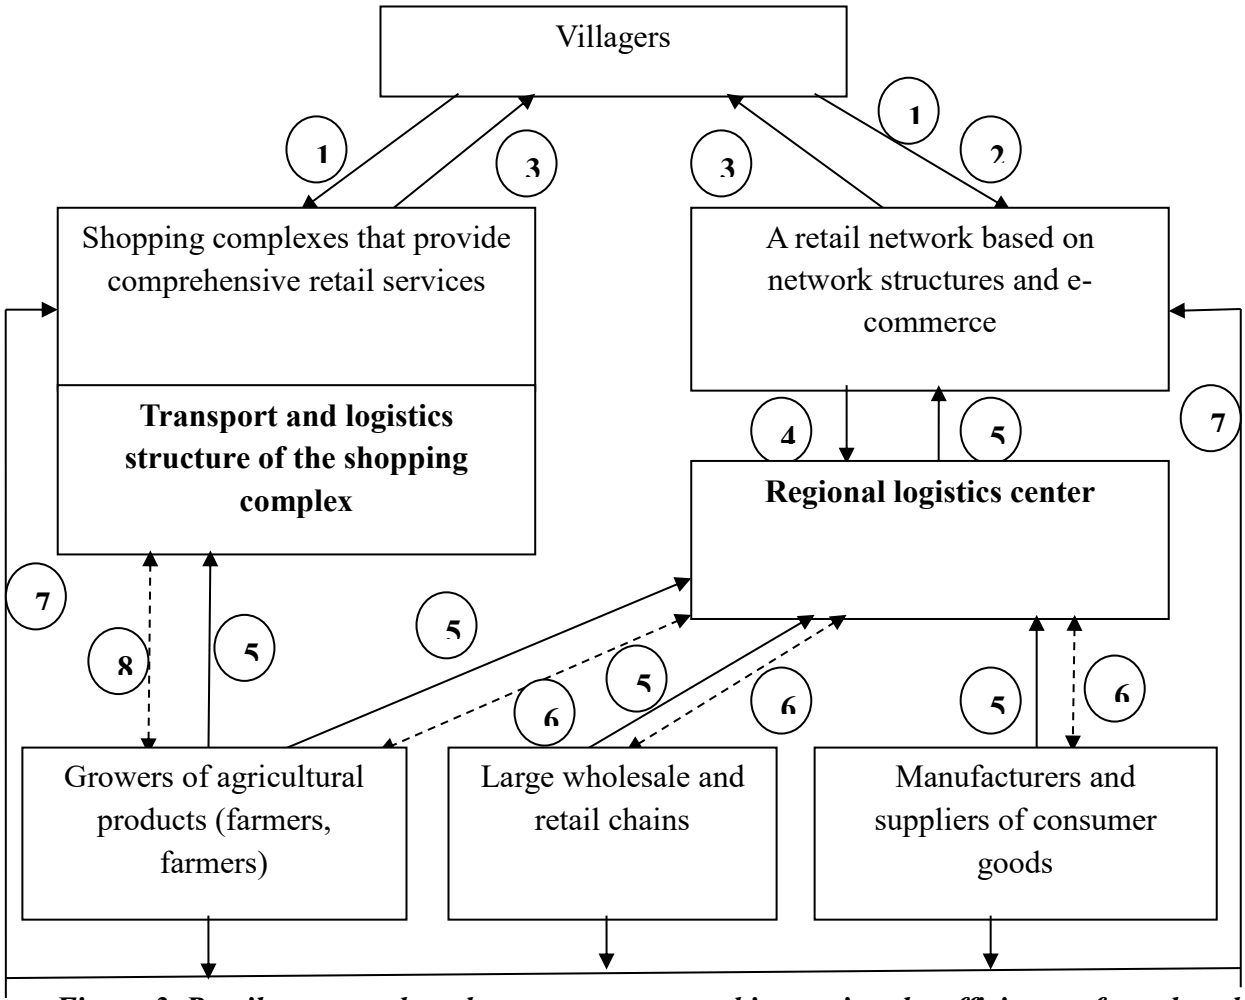

Figure 3. Retail structure based on e-commerce and improving the efficiency of rural trade services*

1 – personal visit to a trading company; 2 – order through communication channels; 3 – purchase (order fulfillment); 4 – order to replenish stocks; 5 – delivery of goods; 6 – contract for continuous replenishment of stocks; 7 – delivery of goods through a direct contract or dealer network; 8 – contract for the supply of agricultural products.

The study of the activities of retail trade organizations has shown the need to increase the efficiency of providing trade services to the population, attract investments in their material and technical base, strengthen the supply system of goods, and apply advanced trade technologies. In

*Formed on the basis of the author's research.

our opinion, this issue can be solved by attracting large urban trade enterprises to rural areas using economic and social means.

In addition, it is proposed to create legal conditions for the processes of mergers of private entrepreneurs. We propose to study and apply the experience of foreign countries in developing retail trade networks and supply cooperation. An important direction for increasing the efficiency of retail trade in rural areas is the formation of a mechanism for constantly improving the culture and quality of trade services. The basis of this mechanism is a strategy for improving the quality of trade services in the region in the future. The uniqueness of this strategy lies in taking into account the regional and local characteristics of retail development.

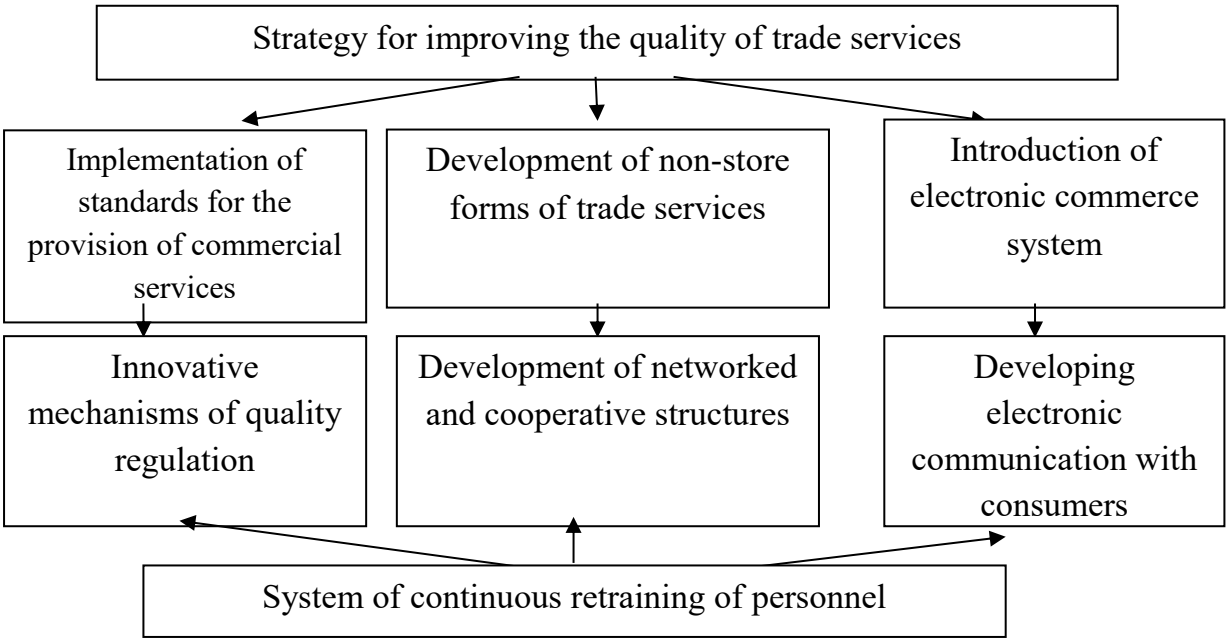

Figure 4. Mechanism for continuous improvement of the quality of trade services to rural residents*

To improve the quality of service provision in trading enterprises in rural settlements, it is necessary to introduce technologies of trading processes and scientific methods of analyzing trade. The methodological basis of this direction is the development and implementation of standards for the provision of trade services in villages. Unlike retail trade rules, service standards reflect the obligations of a trading enterprise regarding the level of trade services. We propose to expand the scientific methods of retail trade by expanding forms of service provision outside the trading floor, expanding e-commerce methods, and introducing innovative regulatory mechanisms for the provision of services in retail enterprises.

Improving the culture of providing trade services requires that employees who work in rural areas have sufficient qualifications, therefore, we propose to form a system of training and retraining personnel in such areas as sales consultants, food sellers, non-food sellers, and sales agents. The implementation of the strategy for the accelerated development of trade services in rural areas will allow changing the ratio of trade services to the population in favor of rural residents.

* Formed on the basis of the author's research.

THE ROLE OF MANAGEMENT IN THE HIGHER EDUCATION SYSTEM: AN INTEGRATED ANALYSIS

Kodirova Charoskhon Avazbek qizi
Head of International Relations Department at MDIS Tashkent
https://doi.org/10.5281/zenodo.14842784

Abstract. *This study explores the crucial role of management within higher education systems, highlighting the increasing need for integrated management approaches to enhance institutional effectiveness and quality. It analyzes current trends and models of educational management, drawing from examples in the United States, France, and Japan, to identify key strategies and challenges. Special attention is given to the implementation of management practices in higher education, including strategic planning, quality management, and the integration of technology. The research emphasizes the importance of adapting leadership styles and fostering a creative environment to meet the evolving demands of modern education. Furthermore, the study addresses the need for continuous professional development, transparency, and stakeholder engagement to ensure the successful integration of management principles and the overall development of the higher education system.*

Keywords: *Higher Education Management, Integrated Management Systems, Quality Management, Strategic Planning, Educational Leadership, Organizational Development.*

Introduction

The management of higher education institutions is a critical factor in shaping educational outcomes, institutional effectiveness, and the overall quality of education provided to students. As the landscape of higher education evolves, driven by globalization, technological advancements, and changing societal needs, the role of management becomes increasingly complex and vital. This article provides an integrated analysis of the role of management in higher education systems, focusing on its functions, challenges, and best practices. It employs an IMRAD structure to present a comprehensive overview of the topic.

Literature Review

The Importance of Management in Higher Education

Management in higher education encompasses a range of activities aimed at ensuring that institutions operate efficiently and effectively. According to the OECD (1998), effective management is essential for improving educational quality and institutional performance. Management involves strategic planning, resource allocation, and the coordination of various activities within the institution (Eurydice, 2024).

Key Functions of Management in Higher Education

1. Strategic Planning: Effective management requires long-term strategic planning to align institutional goals with external demands. Strategic planning helps institutions navigate challenges such as funding cuts and increased competition (Gonzalez et al., 2020).
2. Resource Allocation: Managers are responsible for allocating resources efficiently to support academic programs, research initiatives, and student services. This includes budgeting, staffing, and facilities management (Baker & Pomerantz, 2021).

3. Quality Assurance: Ensuring high educational standards is a fundamental responsibility of management. This involves implementing quality assurance processes to evaluate and improve academic programs (Harvey & Green, 2021).

4. Stakeholder Engagement: Effective management involves engaging with various stakeholders, including faculty, students, alumni, and industry partners. Building strong relationships with these groups enhances institutional reputation and effectiveness (Hemsley-Brown & Oplatka, 2015).

Challenges Facing Management in Higher Education

Management in higher education faces several challenges:

- Funding Constraints: Many institutions struggle with limited funding, necessitating innovative approaches to resource allocation (Santiago et al., 2018).
- Technological Change: The rapid pace of technological advancement requires managers to adapt quickly to new tools and methodologies (Bennett & Maton, 2010).
- Changing Student Demographics: As student populations become more diverse, managers must implement inclusive practices that cater to varied needs (Baker et al., 2019).

Methodology

This study employs a mixed-methods approach that combines qualitative literature review with quantitative data analysis. The primary data were collected through a survey distributed to administrators across various higher education institutions.

Data Collection

A structured questionnaire was developed to gather information on:

- Institutional management practices
- Perceived effectiveness of management strategies
- Challenges faced by managers in higher education

The survey was distributed electronically to 500 administrators from universities across different regions. A total of 250 responses were received, yielding a response rate of 50%.

Data Analysis

Quantitative data were analyzed using descriptive statistics to identify trends in management practices. Qualitative data from open-ended questions were coded thematically to extract key themes related to management challenges and best practices.

Results

Demographic Overview

The survey sample consisted of administrators from diverse backgrounds:

- Position:
- Deans: 30%
- Department Heads: 25%
- Administrative Staff: 45%
- Institution Type:
- Public Universities: 60%
- Private Universities: 25%
- Community Colleges: 15%

Key Findings

1. Strategic Planning:

- Effectiveness: 75% of respondents reported that their institutions had a formal strategic plan.
- Challenges: Common challenges included lack of stakeholder engagement (40%) and insufficient resources (35%).

2. Resource Allocation:

- Satisfaction Levels: Only 55% of administrators expressed satisfaction with current resource allocation processes.
- Budgeting Issues: Respondents highlighted issues such as budget cuts (60%) and competing priorities (50%) as significant barriers.

3. Quality Assurance:

- Implementation: Over 80% indicated that quality assurance processes were in place.
- Effectiveness: However, only 50% felt these processes effectively improved educational outcomes.

4. Stakeholder Engagement:

- Engagement Levels: Approximately 65% reported active engagement with stakeholders.
- Barriers: Limited time and resources were cited as barriers by 55% of respondents.

Table 1: Summary of Key Findings

Management Function	Effectiveness (%)	Challenges (%)
Strategic Planning	75	Lack of engagement (40%), Insufficient resources (35%)
Resource Allocation	55	Budget cuts (60%), Competing priorities (50%)
Quality Assurance	80	Ineffective outcomes (50%)
Stakeholder Engagement	65	Limited time/resources (55%)

Discussion

The findings indicate that while many higher education institutions have established management practices aimed at enhancing effectiveness, significant challenges remain.

Strategic Planning

The high percentage of institutions with formal strategic plans suggests a recognition of the importance of long-term vision in navigating the complexities of higher education. However, the lack of stakeholder engagement poses risks to the effectiveness of these plans. Engaging faculty and students can lead to more comprehensive strategies that address the needs of all stakeholders.

Resource Allocation

The dissatisfaction with resource allocation highlights an ongoing challenge within higher education management. Budget constraints often limit the ability to implement strategic initiatives

effectively. Institutions may benefit from exploring alternative funding sources or partnerships with industry stakeholders.

Quality Assurance

While quality assurance processes are widely implemented, their perceived ineffectiveness raises questions about their design and execution. Institutions should consider incorporating feedback mechanisms that allow for continuous improvement based on stakeholder input.

Stakeholder Engagement

Active engagement with stakeholders is crucial for fostering a supportive educational environment. Institutions should prioritize building relationships with alumni and industry partners to enhance collaboration and support for academic programs.

Conclusion

Management plays a pivotal role in shaping the effectiveness and quality of higher education institutions. While many institutions have established frameworks for strategic planning, resource allocation, quality assurance, and stakeholder engagement, significant challenges persist. Addressing these challenges through innovative practices and enhanced collaboration can lead to improved educational outcomes.

ORGANIZATIONAL AND ECONOMIC MECHANISM FOR IMPROVING THE EFFICIENCY OF ENERGY INDUSTRY ENTERPRISES AND ITS MAIN ELEMENTS

Shukurov Khurshid Shahobidinovich
Management Development Institute of Singapore in Tashkent

Abstract. *The article analyzes the organizational and economic mechanism for improving the efficiency of energy industry enterprises and its key components. The main focus is on research in such areas as the sustainable development of the energy sector, the organization of the production of energy products in conditions of limited resources using technologies based on digitalization and artificial intelligence, increasing competitiveness, as well as economic support for the effective functioning of enterprises.*

Keywords: *organizational and economic mechanism, increasing efficiency, digital technologies, artificial intelligence, increasing competitiveness*

INTRODUCTION

At present, special importance is attached to the introduction of effective organizational and economic mechanisms in the development of the energy sector, which implies the rational use of available resources and targeted satisfaction of demand under the conditions of innovative technologies. At the global level, the key areas of research are the issues of optimal development of the energy sector, energy production in conditions of limited resources with the use of digital technologies and artificial intelligence, as well as improving competitiveness and economic support for the effective functioning of the industry. In the framework of scientific research, more and more attention is paid to the improvement of mechanisms for stimulating high-tech production, optimization of power supply systems, oil and gas supply, as well as ensuring reliable and uninterrupted supply of heat and electricity to consumers.

LITERATURE REVIEW

Many foreign researchers, among them A. Smith, J. Schumpeter, M. Mescon, M. Albert, F. Hedourie, F. Kotler, K. McConnell and S. Brew, have been dealing with the issues of improving the efficiency of industrial enterprises. The category of organizational and economic mechanism is studied in the works of such scientists as I.L. Borisenko, L.I. Evenko, S.E. Kamenitser, T. Kono, B.Z. Milner, Y.M. Osipov, V.N. Popov, D.V. Sokolov. In Uzbekistan, the study of organizational, methodological and economic aspects of improving the efficiency of enterprises in various sectors of the economy is carried out by scientists, including S.S. Gulyamov, M.A. Ikramov, T.Z. Teshabaev, A.M. Kodirov, G.J. Allaeva, G.B. Yusupkhodjaeva, G.A. Khamdamova, M.S. Saitkamolov.

METHODOLOGY OF RESEARCH

The methodological basis of this study was the works of domestic and foreign scientists engaged in the study of organizational and economic mechanisms for improving the efficiency of enterprises in the energy sector. In the course of the analysis, we used normative and legal acts regulating the activities of the industry, as well as materials of scientific and practical conferences devoted to this topic. The study was based on a systematic approach, and to achieve the objectives, the methods of logical, comparative and statistical analysis were used.

ANALYSIS AND RESULTS

In the conditions of effective functioning of the market economy and high competition, considerable attention is paid to the development of organizational and economic methods aimed at improving the efficiency of energy enterprises. These methods should be comprehensive in nature, combining various measures into a single mechanism to achieve optimal results. In this regard, the concept of "organizational and economic mechanism for improving the efficiency of the enterprise" arises.

For a more detailed understanding of the process of improving the efficiency of the enterprise, it is necessary to study such concepts as "mechanism", "economic mechanism" and "organizational mechanism", as well as to analyze their relationship and interaction within the organizational and economic mechanism.

According to the definition given by S.I. Ozhegov and N.Y. Shvedov, the mechanism is the internal structure of a device, machine or apparatus that ensures their operation. In a broader sense, the term can be considered as a system or tool that regulates the order of functioning, the sequence of actions and processes necessary for the realization of a certain phenomenon.

Y.M. Osipov states that nature and all its components are organized, and the system is an ordered formation. The mechanism, in turn, is an element of the system, embedded in it and ensuring its integral functioning. Thus, the mechanism acts as an integral part of the system, contributing to its efficient operation.[2]

From our point of view, the mechanism should be considered as a system consisting of a complex network of interrelated elements organized in a hierarchical order. Each of these components performs certain functions, the nature of which is determined by the tasks assigned to the entire construction of the mechanism.

For a more detailed understanding of the term "economic mechanism" it is important to refer to modern economic research and existing approaches to its definition. According to S. Kamenitser, the economic mechanism is a system of methods and forms of interaction between economic entities and the state, as well as between different production structures. Its goal is to create favorable conditions and incentives that contribute to increasing productivity and improving the living standards of the population.

However, we believe that the above definition is too generalized and does not fully reveal the essence of this concept. In the following we will explain the reasons for this opinion in more detail.

One of the most difficult aspects of the economic mechanism is to determine its objective basis, namely the real economic activity, which can be analyzed and regulated with the help of the tools of the economic mechanism.

In addition, it should be taken into account that the economic mechanism includes various components, such as organizational structures, management methods, legal norms and other elements.

In his works devoted to the study of economic mechanism, P.G. Bunich emphasizes that the achievement of high production efficiency is the main condition for the successful functioning of this mechanism. [1] In this case, efficiency is considered as the main criterion for assessing the performance of the economic process.

Y.M. Osipov considers the economic mechanism as a complex social system, including economic entities, each of which has built-in management mechanisms. The interaction of these

subjects is carried out through socio-economic institutions that form a unified system and regulate the activities of participants in the economic process. [2]

We support the point of view of S.A. Zhdanov, who, analyzing the research in this area, proposes to define the economic mechanism as a set of organizational structure of the main activity, methods of functioning of the system of economic relations arising in the process of economic activity. This process covers the production and sale of material or information products, provision of services, income generation, as well as the rational use of available resources.[2]

In modern economic science there is no unified, generally accepted definition of the concepts of "organizational mechanism" and "economic mechanism". In this regard, we intend to analyze the works of both domestic and foreign economists studying these concepts to identify the key ideas embedded in these terms, and on this basis to develop our own approach to their definition.

T. Kono proposes to consider the organizing mechanism as a tool for classifying works and building a hierarchical structure that unites them into a single system. [2] However, since this definition mainly focuses on the fixation and provision of material aspects of the organizing mechanism, it is difficult to correlate it with a broader understanding of the term, including not only material, but also managerial and economic components.

M. Maksimtsov and I. Ignatieva consider the organizational mechanism as a management system functioning within the framework of economic norms and including the structure, authority and resources necessary for the coordination of collectives and decision-making. [5], In their opinion, this approach allows to take into account both stable and changing characteristics of the management mechanism.

D.V. Sokolov connects this understanding with the development of logical structures that correspond to the resource base and production goals.[6] However, we believe that this classification does not sufficiently reveal the key concepts and important aspects of the problem under study.

According to Y.M. Osipov, the organizational mechanism is a set of methods and organizational forms aimed at the creation, development and optimization of production processes. It covers not only individual elements of production, but also ways of their structuring, interrelationships between components, and also includes legal norms and organizational structures that ensure the effective functioning of the production system. [2]

Alexander Bukreev and Yuri Osipov believe that the organizational mechanism consists of various forms of management that ensure the stable operation of the enterprise. [8]In turn, Stanislav Kamenitser considers the mechanism of organizational management as a system of administrative measures aimed at improving the efficiency and productivity of production. [9]

Organizational management mechanism is focused on increasing productivity and includes various methods such as improving the management structure, effective coordination of managers and specialists, selection and distribution of personnel, evaluation of their performance, motivation of labor, providing technical and information support, regulation of management processes and control over their execution.

In our opinion, the organizational mechanism is a system of interrelated and structured procedures aimed at the formation, development and continuous improvement of production activities.

In his work "A brief sketch of basic economic mechanisms", French researcher Charles Rist [10] considers the concept of "economic mechanism" and expresses his opinion regarding its study. In his opinion, it is enough to simply recognize the existence of economic mechanisms, which is already an important step in their understanding.

C. Kamenitser considers the economic mechanism of management as a set of measures aimed at stimulating the economic interests of both individual employees and labor collectives in order to increase productivity. This opinion largely echoes the point of view of Charles Rist, who argued that economic mechanisms exist and can be identified in the process of analysis. [9]

According to S. Kamenitzer, the main task of the economic mechanism is to increase the efficiency of production of quality products, which not only meets the needs of the economy, but also contributes to the long-term development of production processes.

A.M. Bukreev argues that the economic mechanism cannot be reduced solely to the system of financial incentives and material remuneration of employees. He believes that the economic mechanism is a complex system that includes various forms and management procedures at different levels. Thus, the economic mechanism covers not only financial instruments, but also other management methods that ensure the stable and effective functioning of the enterprise. [12]

A. Kulman notes that economic dynamics is formed not only under the influence of economic processes, but also depends on many other factors. He believes that the study of the components of economic theory contributes to the derivation of generalized regularities and allows a better understanding of the overall picture of the ongoing phenomena.

According to A. Kuhlmann, the economic mechanism is a set of self-regulating processes that arise automatically in response to certain initial economic events without requiring additional intervention.

Economic processes develop spontaneously, following a certain sequence that leads to specific results that depend on the nature of the initial event. This means that the economic mechanism is determined by both initial conditions and the outcome of the chain of occurring phenomena. Thus, according to A. Kuhlmann [13], the number of possible economic mechanisms depends on the characteristics of the initial impulse and the conditions under which it is formed.

According to theoretical provisions, the number of economic mechanisms is determined by the number of impulses that initiate the formation of interrelated systems, as well as the number of already existing relations within these systems. Multiplication of these two parameters leads to a significant number of possible variations, which indicates the diversity of economic mechanisms.

V.P. Moskalenko points out that the traditional representation of economic mechanism as a system does not sufficiently take into account key aspects such as the interaction between elements, their organizational arrangement, financial and investment processes and management subsystem. In his work, he emphasizes that the economic mechanism is a complex system that ensures the continuity of economic processes and includes a network of interrelated economic strategies organized in a hierarchical order. Within this system, separate subsystems such as activity analysis, planning, control and motivation of personnel are distinguished.

According to the author, an integrated approach to organizational and economic mechanisms involves the use of various forms of support, including organizational and legal, informational, regulatory, methodological and technical tools. This approach forms a system consisting of interrelated and structured organizational and economic processes necessary for the effective performance of various activities.

In practical activities, many organizational and economic mechanisms aimed at achieving various goals are applied. They include methods of technological transportation management, unification of enterprises, coordination of financial and industrial groups and other similar mechanisms.

THE ORGANIZATIONAL AND ECONOMIC MECHANISM FOR IMPROVING THE EFFICIENCY OF THE ENERGY ENTERPRISE

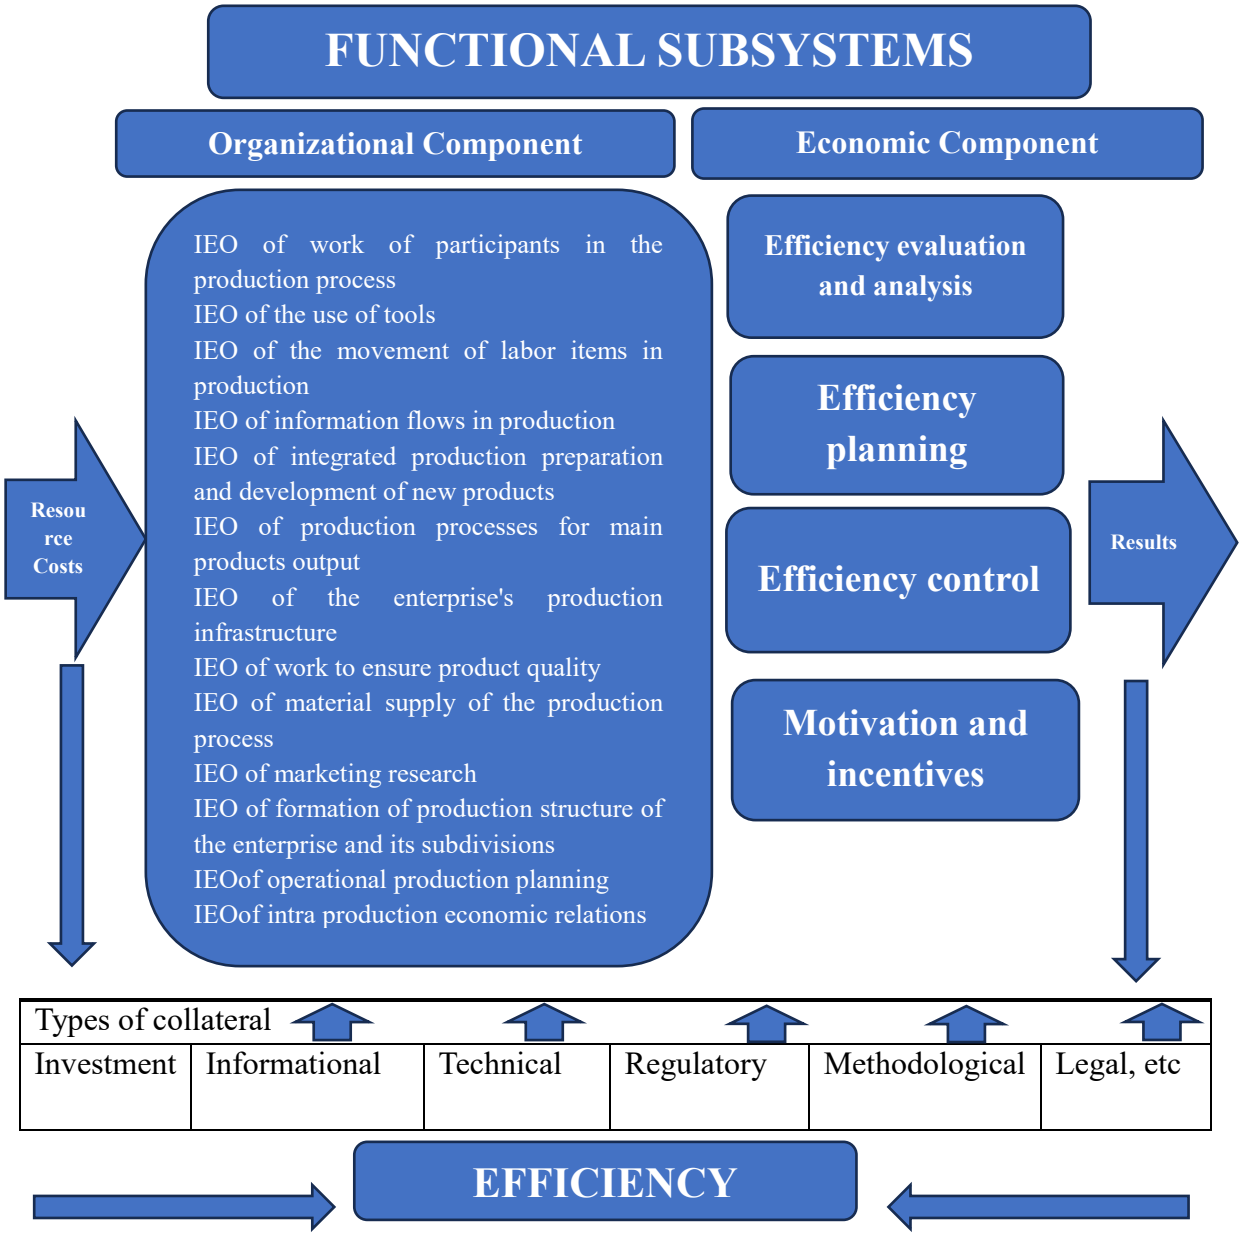

Figure 1: Scheme of the organizational and economic mechanism for improving the efficiency of the energy enterprise.

If we consider the task of increasing the productivity of the enterprise, we can identify a system of interrelated measures, realized through certain forms and methods of management. Organizational and economic mechanism for improving the efficiency of the enterprise (OEMIE) is focused on optimizing the work of the enterprise at all levels of management and in various directions. It represents a set of measures covering both organizational and economic aspects, and

requires a clear structure, as well as competent implementation using appropriate management tools. [11]

This mechanism ensures strict interaction between the elements of the system, forms a logical organization and combines organizational and economic activities into a single structure. To maximize the efficiency of the enterprise, it is necessary to choose the most effective methods and tools that will improve the quality of work and efficiency of economic activity (Fig. 1).

The structure of OEMIE is presented in the form of a scheme, which shows the functional subsystems that make up the organizational and economic components of the mechanism, as well as various types of support available for its implementation.

Within the framework of this mechanism there are operational subsystems that ensure the increase in the efficiency of production processes at the enterprise. Each of them performs certain tasks and takes its place in the overall organizational structure, contributing to the achievement of goals.

Organizational and economic mechanism aimed at improving the efficiency of the enterprise includes a number of interrelated subsystems. Among them we can highlight such key areas as the rational use of equipment and tools, increasing the productivity of employees, optimizing the movement of material resources, preparing production for the release of new products, managing information flows, ensuring high quality of products, development of production infrastructure and logistics.

In addition, the mechanism covers marketing research, operational planning, formation of optimal production structure, regulation of on-farm economic relations and management of social processes within the enterprise. Each of these subsystems plays an important role and performs certain functions, providing a comprehensive approach to improving the efficiency of the enterprise.

To improve the efficiency of production at the enterprise requires an economic mechanism that includes several key functional subsystems. These include efficiency analysis and evaluation, planning, control and motivation of personnel.

Within the framework of the subsystem responsible for improving the efficiency of labor organization in the production process, it is necessary to solve a wide range of tasks. To achieve the set goals, it is important to implement such measures as improving the qualifications of employees, improving the organization of workplaces, optimizing labor processes, establishing reasonable labor standards, as well as implementing a system of material and non-material incentives for employees.

In addition, for the effective development of production processes, it is necessary that a specialized subsystem responsible for their optimization is engaged in the identification and implementation of the most effective forms and methods of management.

To improve the efficiency of the enterprise, each element of the organizational and economic mechanism (OEMIE) requires appropriate resources. Such resources include organizational and legal, investment, information, regulatory, program, material and technical, mathematical and methodological components.

The economic mechanism aimed at improving the performance of the enterprise can be based on various sources of funding, both internal and external. To ensure sustainable operation of the organization, it is important to provide access to credit funds, subsidies, income from

operations on the stock and foreign exchange markets, as well as to apply other financial instruments that contribute to the stable development of the enterprise.

For the effective functioning of the organizational and economic mechanism aimed at improving the performance of the enterprise, it is important to maximize the use of the information system. It should include all the necessary components and ensure their smooth interaction, creating a unified information environment.

In addition, the successful operation of OEMIE requires a reliable regulatory framework containing standards and regulations governing labor costs, labor remuneration, resource and equipment inventory management, financial indicators, as well as the costs of materials, fuel and energy supply. An important element is the norms that determine the utilization of production capacity in accordance with the established timeframes. A significant role in this process is also played by socio-economic norms and standards, which affect not only the efficiency of the enterprise, but also its social responsibility to society.

CONCLUSIONS

The efficiency of the enterprise directly depends on the full-fledged functioning of the organizational and economic mechanism of efficiency improvement. To achieve the necessary level of performance, it is important to pay special attention to its development and improvement.

It should be taken into account that the OEMIE belongs to the category of microeconomic mechanisms, since at the enterprise level a set of interrelated organizational and economic measures aimed at increasing productivity is implemented.

One of the key characteristics of this mechanism is its emergent nature - the ability of the whole system to demonstrate properties that are not inherent in its individual components. This means that it is the coordinated interaction of all elements of the mechanism that leads to a significant increase in business efficiency. Otherwise, the isolated application of individual tools will not provide the same positive result.

The functioning of this mechanism is aimed at increasing the efficiency of all spheres of the enterprise's activities through the optimal use of available resources and the introduction of advanced management solutions. The implementation of organizational and economic measures by the company's employees plays a key role in achieving this goal.

The mechanism works by establishing a clear relationship between the elements of the system, structuring them and determining their importance. It includes a set of organizational and economic measures and the use of the most appropriate tools to ensure high quality of work. This ensures the growth of business efficiency in all areas of the enterprise's activities.

Ultimately, the main objective of the OEMIE is to form a set of organizational and economic measures aimed at ensuring timely production and delivery of products in accordance with established standards, as well as the rational use of enterprise resources.

This part presents the structure and content of the developed mechanism focused on improving the efficiency of the enterprise. This mechanism is built on the basis of a systematic approach and includes a set of elements, among which are functional and supporting subsystems, acting in close interrelation as a single system.
